Soon afterward it seemed my work to treat a critical case of varicose veins of the legs contracted in the army in 1861, for which noted specialists said *materia medica* could do nothing and death would soon result. The man could scarcely walk and had given up all hope. Absent treatment was given, and in less than a week he was able to shingle a roof on a two-story house and has worked at his trade (carpenter) ever since. He is the picture of ruddy health to-day and gives Christian Science the credit for it. He studies Science and Health and is able to demonstrate considerable for himself and family.

From these two cases as a beginning years ago, I have ever since been trying to do my duty as a worker for Truth as revealed in Christian Science, and the blessing has come to me in that I have thereby been working out my own salvation. While destroying error for others I have simultaneously been surely eradicating it from my own consciousness, with a resultant better bodily manifestation.

One of the things impressed on me forcibly at every turn has been that the claims and sins I had to meet for others were old claims and sins of my own which I had only partially demonstrated out of, and, in working faithfully for others, I almost unwittingly destroyed root and branch of many of these remnants of error in my own consciousness.

The parable of the ten talents and the fate of the unprofitable servant aptly emphasize our duty to go to work at once for others as well as for ourselves, using the talents we have without any misgivings. Error would have us procrastinate and wait for a more convenient season. Paul's admonition, "Behold, now is the accepted time; behold, now is the day of salvation," is as applicable to us and our work to-day as it was to his followers twenty centuries ago.

I do not advocate undue or misguided efforts, but only suggest the wisdom of not shrinking where duty plainly calls. The error I first fell into was in allowing myself to shirk for plausible, but false, reasons what I now know was my work. Like Felix of old we are prone, with one excuse or another, to wait for "a convenient season."

In the midst of our mortal mind discord and commotion we are sometimes tempted to surrender to the thought that *to-morrow* the noise and din will be less or the problem easier. Then we need to know that this is only another mirage of mortal belief, and that the only reality is "the ever-present, eternal *now*," and that it is not only our duty but our blessed privilege to meet this error of procrastination *now*. If error says, "No work comes to do," meet it scientifically like any other claim of error or sin or disease, and, obeying the Master's injunction, "Seek ye first the kingdom of God [Good], and His righteousness [right thinking], and all these things shall be added unto you."

A Church Charter Granted.

It may be of some interest to the Field, especially to Pennsylvania, to state that last January our little church felt that the time had arrived to apply for a charter. As charters had been refused to some Christian Science Churches in this state, we deemed it wise to make careful inquiry before applying.

We came to the conclusion that there were no obstacles in the way, and a compliance with the law was all that was necessary.

May 31 the directors signed the application for a charter, and *June 6* the final affidavit and signature was affixed.

Yours in Truth,
RICHARD SMITH.

Reports at the Annual Meeting.

In addition to those mentioned in a recent issue of the *Sentinel,* reports of the progress of the work were also received from the following places:—

Minneapolis, Minn., San Francisco, Cal., Omaha, Neb., Eau Claire, Wis., and Bloomington, Ill.

Doubtless there are others we have not mentioned. We realized our list was incomplete, but we did not intentionally omit any.

Rest.

BY H. P. C.

REST in the Lord
And thou shalt see
Life, Truth, Love, and
Sweet Liberty.

Rest in the Lord
And have no fear,
For thou must know
He's always near.

Rest in the Lord!
Let no thought mar
Or drive the Truth
From thee afar.

Rest in the Lord!
He is thy all,—
Life, Truth, and Love,—
Naught can appal.

Questions and Answers.

Why is Christian Science so condemnatory of material things; are not things material, in their sphere, as good as things spiritual?

A Reader, but not a Christian Scientist.

Perhaps our inquirer means—Are not things temporal, in their place, as good as things eternal? If so, we feel obliged to say, No; the eternal is better than the temporal from any point of view.

We are commanded by Scripture to "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but things which are not seen are eternal."

These were Paul's words. Paul manifestly regarded the eternal—spiritual—as that which should be looked for—that is, understood and practised.

Jesus held the same view. He said, "Judge not according to the appearance, but judge righteous judgment."

Christian Science teaches that the temporal is that which, to the personal or material senses, seems real and substantial, but which, in the true or spiritual sense, is unreal and insubstantial. It is a mistake, then, to regard the temporal—material—as of as great value as the eternal—spiritual. This has been the mistake of the ages. Empires and republics have been built upon temporal—material—foundations instead of eternal—spiritual, and they have fallen as did Babylon, Greece, and Rome, and as will fall all which are not founded on an eternal—spiritual—instead of a temporal—material—foundation.

The true Scientific sense of the temporal—material—however, is that it is the false human conception of the eternal—spiritual. Reverse this false sense and we have the true or eternal—spiritual—conception. When sin is eliminated from consciousness there will be no false, or material, all will be true, or spiritual—then the distinction between the temporal and eternal will have vanished, and a new heaven and a new earth appear.

Where a small body of Christian Scientists, who are not organized as a church, hold services regularly, is it desirable to have notice of such services in the Journal.—J. P.

We think that wherever regular services are held, no matter how small the attendance, notice of such services should be given in the *Journal*, and, as far as possible, in the local papers. At any time strangers may be in the city who would gladly attend the meetings if they knew where to find them. When going to a strange place, among the first things a Christian Scientist does, is to turn to the *Journal* and see if there are any Christian Scientists there, and if they hold services. This is also true of many, especially traveling men, who are becoming interested, but do not as yet call themselves Christian Scientists.

Wherever there is a body of Christian Scientists they are looking forward to the time when they will have an organized church, and it seems to us that a notice of what they are doing will enable them to reach a greater number and thereby hasten the desired event.

The *Observer* says that "the pastor of a church must be a Christian, not merely in name, but with so much of Christ in him that he will do right because it is right, and be so afraid of doing wrong that he shall have no fear of man."

Secretary Long recently said that the test of a good sermon is to make the hearer go away saying to himself, "I will try to be a better man."

Boston Evening Transcript.

Why I became a Christian Scientist.

BY W. JOHN MURRAY.

How came you to renounce Catholicism?" is often asked of me by people who are surprised to find one who has ever believed in the teachings of the Roman Catholic Church, embracing any other form of religion. It would not occasion nearly so much surprise if I had been an avowed atheist, and I might say right here that, according to the opinion of my relatives and friends (which were), it would be much better if I were a lukewarm member, indulging in all sorts of vice and degradation, with some hope of being reconciled to the Catholic Church even at the expiration of an ill-spent life, and, with just enough time left in which to receive the last rites, than to be a Christian Scientist.

To give a few of my reasons for espousing *The* cause let me first say that I had been a weekly communicant, fully believing in the grace to be obtained from partaking of the sacrament, during which time my wife had been subjected to twelve surgical operations at the hands of some of the best doctors in our sections, assisted by the prayers of the faithful, both in this country and Europe, and all to no avail, for in spite of this strong combination, I was doomed to become a widower.

The last rites of the Church were administered to my (seemingly) dying wife, and my brother and mother-in-law were admitted to her room, no one having enjoyed that privilege but trained nurses and myself for some time. I permitted a Christian Scientist to visit her at this juncture, with this thought in my mind: they cannot any more than kill her, and I shall have the satisfaction of knowing that nothing has been left undone that might have been done. Suffice it to say, that the stone which the builders rejected became the head of the corner, and our home was blessed by a strong, healthy wife and mother.

Now to answer the question: "Why did *you* leave the Catholic Church?" I had been told that cures wrought by Christian Science were the work of the devil; during my wife's healing I had been a careful and, I desired to be, an unbiased student of Science and Health, by Mary Baker G. Eddy, and as yet had discovered nothing in it which would lead me to suppose that there was anything of an evil nature contained therein. On the contrary, I found much food for earnest thought, especially in the chapter, "Atonement and Eucharist," where I saw what was required of the true Christian Scientist, and also discovered that as a result of living the life and understanding the Principle which Jesus taught, it was not only possible but compulsory to fulfil the injunction contained in the last chapter of Mark's Gospel. Imbued with this desire, and impatient to learn more of this beautiful Truth, I availed myself of the first opportunity to take class instruction and I can scarcely imagine the Apostles drinking in the Master's words with more avidity that *I* did during that class. Since then "That Light which enlighteneth every man," if he desires it, has enabled me to give up brother and sister and worldly position, in preference to again going back into the darkness of belief rather than understanding, and often have I said, and still say, that a crust in Science, is sweeter than all of this world's goods without it. My views regarding the sacraments have undergone a decided change, for Science teaches that Baptism is renewal of the mind through Spiritual understanding, and to those who are thus baptized, power is given to become the sons of God, and I would cheerfully recommend to any one desirous of knowing what the true Body and Blood is, a careful, unprejudiced perusal of "Atonement and Eucharist," as contained in "Science and Health with Key to the Scriptures." I often think what a great blessing the little book has been to me, enabling me to prove as

Digitized by Google

far as I understand the Allness of Good and the nothingness of evil, sin, and disease.

End of the Mt. Vernon, N. Y. Case.

ANOTHER effort on the part of error to convict a Christian Scientist of manslaughter has signally failed, as will be seen from the following letter. The death of Mrs. Barguet of New York occurred while she was receiving Christian Science treatment from Mrs. Fowler. Mrs. Fowler was arrested on the charge of having caused the death of Mrs. Barguet and held to await the action of the grand jury. After giving the matter due consideration the grand jury came to the conclusion that the defendant could not be convicted of the charge, and the case was dismissed accordingly.

Mt. Vernon, N. Y., June 4, 1899.

Mr. Carol Norton, C.S.D.

Dear Brother:—You have heard ere this of the triumph of Truth in our midst. Mortal mind did its best (or worst) and was badly routed, although we did not discharge a ball, except those loaded with *love* and wrapped in *love*. So what else could the outcome have been?

The papers say that the vote of the jury was fifteen to eleven. We were given to understand by one of the jurors that it was unanimously decided to throw it out. The District Attorney is quoted as saying that he could only present the case fairly to the jury, regardless of public clamor.

We want to thank Mr. Norton for his loving labor, sound advice, and trenchant pen, that brought to our consciousness such a grand uplifting when most needed. It knits all together closer in that bond of brotherly love which is to spread the wide world over, and which careth even for a sparrow.

Our thanks to Mr. Burger, and all who aided in this grand demonstration of love over hate.

Your Sister and Brother in Truth,

MR. and MRS. C. H. FOWLER.

From Australia.

Sydney, New South Wales, Australia, April 24, 1899.

Dear Sentinel:—I desire to express my gratitude to the many Christian Science friends in Boston, Hartford, and New York City, who did so much to make my sojourn among them last year so delightful and profitable. With their help and the never-to-be-forgotten experiences at the Mother Church it would indeed have been strange if I had returned as empty as when I went. I left my home a student of mental Science. I returned with an earnest longing, a desire I feel sure will never grow less, to become a Christian Scientist.

When I left Australia in February of last year, practically nothing was known here of Christian Science. Mental Science was strong in the leading centres of population, and although copies of Science and Health were in the Mental Science libraries, they were seldom read, being considered "too heavy and not containing enough of the Spirit." As soon as I understood the situation, I communicated the facts to my wife and sent her copies of all the literature. She at once took a firm stand. Science and Health is now in great demand, and the present seems big with promise of a rich harvest in the near future.

In Brisbane, the capital of our neighbor colony, are to be found a few loyal Scientists.

Our book depot is stocked with all the genuine literature. Every Tuesday we meet at the home of the writer and read from Science and Health, each reading in turn. Sunday evening we all meet again and read the lesson in the *Quarterly*. The harmony of the meetings is most beautiful, and we are thus encouraged to press on.

W. W. Virtue.

Brief Comments.

Notwithstanding the condemnation excited of late, both here and abroad, the Christian Scientists, according to reports made at their convention in this city, continue to increase in numbers. We note that last year there was an increase of seventy-five churches, while in 1897 the new churches numbered only forty-four. On Sunday last 2,550 names were added to the rolls at the Mother Church in the Back Bay; while altogether the sect now has a membership of seventy thousand, and the church attendants number three hundred thousand. These are proofs that Christian Science must be regarded seriously.—*Boston Journal.*

The *New York Witness* says of Mrs. Eddy: "If she did not 'discover' the principles of her faith she certainly 'founded' the sect which believes in them, and with that people generally will be content to let the matter rest."

Thousands of Christian Scientists from all over the country are coming to Boston next week. Let us hope there will be no "naughty weather" to disturb the equanimity of any one among them.—*Boston Globe.*

Whether or not one is a Christian Scientist, it is impossible not to be impressed with the devotion which Mrs. Eddy inspires among her disciples. It is something almost sublime in its intensity.—*Boston Herald.*

Of course the Christian Scientists who greeted their Leader yesterday in Tremont Temple fully realized that it wasn't actually hot, but only "seemed" so.—*Boston Globe.*

There seems to be no reasonable doubt that Mrs. Mary Baker Eddy is very much alive. Also Judge Hanna.

Boston Herald.

There's no doubt about it. The faith of the Christian Scientists is something as complete as it is sublime.

Boston Herald.

The Christian Scientists have got a Hanna, too; but he's a judge, instead of a boss.—*Boston Herald.*

Notices.

Journal Delayed.

Owing to a fire in the building in which is located the plant that does the press work of the *Journal,* there will be a delay in getting the July *Journal* out to the Field.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 134 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1808. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Boston, Mass.

Published by the Christian Science Publishing Society,

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JULY 6, 1899. | Vol. 1 No. 45

M. Jules Cambon.

AMONG the speakers at the Annual Commencement dinner of the Alumni Association of Harvard College, June 28, were M. Jules Cambon, ambassador from France to the United States, and Major-General Wood, military governor of the Province of Santiago.

M. Cambon spoke in part as follows:—

I am extremely grateful to President Adams, for permitting me to speak to you in French—(laughter)—and I will tell you the reason. (Applause.) It is because I believe that all here will understand my French very much better than they would understand my English. (Great laughter and applause.)

I can only say that I am very sensible, and feel touched at the thought of the compliment it conveys, of the honor done me to-day by Harvard University in conferring upon me its degree of doctor of laws. I am sensible of this honor, not because I regard it as conferred upon me personally, but because I feel it to have a significance higher than that of mere personal compliment.

I have, in fact, been making a few investigations into the archives of our French embassy, and have discovered that one of my predecessors in the office had bestowed upon him the same degree and dignity as that which you have been kind enough to confer upon me. (Applause.) But that was given at the time when your states, though confederated, were not yet "United States." (Laughter and applause.)

✠

That was a very glorious epoch for you, rather than for your fathers—(more laughter)—yet, all the same, a glorious epoch in the history of the United States. (Applause.) Those years were for you full of the hopes which have since been altogether realized. You were just then maintaining the heroic struggle which has given you your independence. (Applause.) France lent you her aid, and the University of Harvard, desirous of manifesting its gratitude, conferred the title of doctor of laws on one of my predecessors.

But more than a century has gone by since that time, and now France once again enters into your history. Last year she took the hand of your whilom adversary, and endeavored to bring it near to your own. (Laughter.) And at last she succeeded in bringing the two hands together. (Loud applause.) I was the instrument of the policy which had this success for its result—the obedient instrument, I may say, of the ambitious thought of France.

I know that you have had the feeling for us to-day which your fathers cherished a century ago; and it is to the traditional friendship between the United States and France that is due the honor you have conferred upon me to-day. (Prolonged applause.)

I know I shall be permitted to say I do not doubt, in order still further to testify to this persistent and eternal friendship, that, in time to come, my successors will receive, sir (turning to President Eliot), from your successors the same honors as those which you have conferred upon me to-day. (Loud applause). I am very proud to belong henceforth to Harvard University. (More applause.) So far as my own affiliations are concerned, I am a pupil of the University of Paris, and took my degrees at our ancient Sorbonne. The University of Harvard is certainly very old, and it has the respect which belongs to all things which are ancient. Yet I must avow that the Sorbonne is a little older than Harvard University—(laughter)—having been founded in the first years of the Middle Ages.

I need not remind you of the time when students from all countries flocked to the Sorbonne to listen to its professors and teachers. It proves that even in that epoch of struggle and of combat between nations and men, there were no dividing frontier lines when the things of the mind were in question. (Loud applause.)

Well, since then, considerable time has elapsed. I do not doubt that political frontiers have subsisted, but, assuredly, if differences between the different peoples of the earth continue to exist, they have so faded away that to-day, for men of science and of thought, there is but one common country. (Great applause.)

Permit me, then, to thank you from a full heart for the feeling of profound attachment which you have awakened in me. And pray pardon me if, in addressing to you these my thanks, I have mingled with them a souvenir of the University of France and of our old Sorbonne. (Loud applause.)

✠

Major-General Leonard Wood.

Inasmuch as your president has asked me to say something about colonial government I will give you a brief account of affairs in Cuba, and tell you something of what the government is trying to do there.

When the island was turned over to us, we found the civil government practically disorganized and the people living under conditions almost impossible to conceive among any civilized people. We found them living in ruined towns, without water supply, without schools, and with thoroughly inefficient courts, in which methods of procedure existed (and they still exist) that are absolutely intolerable from our standpoint.

We are going to establish in the island of Cuba a stable government (applause), such a government as will guarantee freedom of life and property and freedom in the

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

worship of God to every man and to all races who may come to that island. (Applause.) And we are going to commence the work of reformation (or I hope we shall commence it in this way) with the reformation of municipal governments, the institution of thoroughly modern school systems, and the reformation of the methods of criminal procedure. We shall endeavor to establish such a government as will be a credit to our own government, and will compel the respect of the world—to show that the United States are honestly and with ability discharging the trust imposed upon them. (Applause.)

✠

With regard to the Cuban people, I simply ask you to consider the conditions under which they live. They have had no real voice in their own government for generations. They have lived under conditions, which from our standpoint, are inconceivable, and they are suspicious and distrustful—and, perhaps, ungrateful for what we do.

But that has absolutely no bearing on our line of conduct. (Cheers and applause.) We have only one course to pursue—to do what we believe to be right. I do not believe it is possible to controvert the truth. We are going to go forward, and if this people decide to branch off and form an independent state, they will take with them the model which we have given to them, and if they come to us they will do so because they can hope for nothing better. But we have given the Cubans assurances, and by these assurances we are in honor bound to be held.

We have great faith in our institutions and in what we shall be able to do. The questions to-day are not questions for discussion, but questions for action. (Applause.) The less we talk about the Cubans, the less we criticise them, the better and the more thoroughly we shall do our work. We must go ahead and institute those reforms which we know to be right. Whatever government is established in Cuba is a government established for the people of the United States, for they will be responsible up to the moment of turning it over.

We have got to keep the government out of politics, and for a long time we must keep it under military control, which will enable us to remove corrupt methods and corrupt officials summarily and without much discussion when we detect them. (Applause.) I have never found the Cubans to fail to respond to any good suggestion. They have supported us in the suggestion to purify the courts and to liberalize the press, and I can say that they will support us in putting these and other reforms into effect. Whether we are establishing government in Cuba, or supporting the flag in other parts of the world, we must see to it that under the American flag whatever takes place will be creditable to us as a nation. (Cheers and applause.)

Items of Interest.

Wednesday, June 28, was the annual commencement of Harvard College. Among the interesting features of the occasion was the conferring of honorary degrees. The degree LL.D. was conferred upon Jules Martin Cambon, ambassador from France to the United States; Rear-Admiral Sampson; Major-General Wood, military governor of Santiago; Kentaro Kaneko, who graduated from Harvard College with honors, twenty years ago, and is at present the secretary of the interior of the Japanese Cabinet; and Arthur Irvin Hadley, president-elect of Yale University.

At the commencement dinner which followed, addresses were delivered by Charles Francis Adams, retiring president of the Alumni Association, President Eliot, Governor Wolcott, M. Jules Cambon, Admiral Sampson, and Major-General Wood.

Mr. Frederick Holls of the American delegation to the Peace Conference at The Hague in alluding to the German attitude, said, "This matter is much exaggerated. Active negotiations took place, but Germany is in no way irreconcilable and would not hesitate, more than the other Powers, to agree to an arbitration court, established on an acceptable basis. The Turks, themselves, state that no one is able to say that they object to the arbitration scheme, and that when the proposal has been finally shaped, they will examine it and only then give an opinion, referring to Constantinople if the wording of the scheme contains points not covered by their instructions."

Information is received from Washington that President McKinley has determined to raise an additional force of volunteers to send to General Otis after the rainy season. The additional force will probably amount to fifteen thousand men. No proclamation calling for volunteers will be issued, and no state or organized regiments will be accepted, but the additional troops will be enlisted as individuals, like the recruits for regular regiments, the officers being taken from different states and approved by the President.

Great interest is manifest in the first steps taken at Manila in the direction of self-government. The Supreme Court sits daily and the American and Filipino judges hold consultations through an interpreter. A unanimous vote is required for a decision.

The native judges will now begin to hold criminal courts, having jurisdiction over all offences except those committed by soldiers or against military authority.

On behalf of the International Peace Association of Women, Mme. Zolenka presented to M. de Staal, president of the Peace Conference, a handsomely bound album containing peace petitions from women's organizations in eighteen nations. The petitions are prefaced with an introduction embodying a statement that "nations no longer hate, since we women hold our hands across the spaces encircling the world with a girdle of love."

Articles of incorporation have been filed at Trenton, N. J., by the American Isthmus Ship Canal Company. The nominal capital is thirty thousand dollars, but it may be increased to two hundred and fifty million dollars.

The corporation has in view the acquirement of a route across the isthmus by which a canal can be built at sea level, without locks, and thirty-two feet deep at low tide.

The Czar's disarmament scheme has been outlined by M. de Staal, president of the Peace Conference. He asks no reduction of the present force, but wants no increase for five years. He is of the opinion that if a standstill could be agreed upon a reduction would soon come of itself. A naval standstill will also be introduced.

The Harvard crews made a clean sweep of the annual races with Yale. The official time of the 'varsity race, a distance of four miles, was twenty minutes and fifty-two and one half seconds. The Thames River, Conn., was the scene of the races.

Dr. Daniel Folkmar, formerly lecturer in sociology at the University of Chicago, has been appointed professor of

Digitized by Google

anthropology in the new University of Brussels, Belgium. He has also just received the title "doctor of social sciences," from the University.

It is reported at Washington that the government has rejected the proposition submitted to Ambassador Choate by the British government, with respect to the location of a temporary boundary between Alaska and Canada.

General Otis has given orders opening up many important ports in the Philippines that have been closed since the outbreak. As a result there will be a great boom in the hemp business, which has been at a standstill.

The University of Pennsylvania crew won the big 'varsity race on the Hudson. The distance was four miles, time twenty minutes four seconds. Wisconsin was a close second, Cornell third, and Columbia fourth.

The Rev. Edward Everett Hale preached his last sermon, as active pastor of the South Congregational Church, Boston, Mass., Sunday morning, June 25. He will retaln his connection with the church as "pastor emeritus."

General Wood, military governor of Santiago province, has refused the offer of the presidency of a Washington street car company at a salary of thirty thousand dollars a year, and will return to Cuba.

Governor Roosevelt attended the first re-union of the Rough Riders at Las Vegas, N. M. He was greeted with great enthusiasm all along the way, and received a most cordial welcome at Las Vegas.

It is estimated that during the months of May and June, seventy-five hundred people have gone from Johannesburg to Cape Town on account of the fear of trouble between Great Britain and Transvaal.

Governor Roosevelt has telegraphed President McKinley that in the event of a call for volunteers being made, New York State is prepared to furnish all the men the government might ask for.

Information is received from Manila that Aguinaldo has massed opposite MacArthur the largest insurgent army that has yet been brought together, and taken command himself.

In anticipation of trouble with Great Britain, Orange Free State is making preparations for defence, and has voted forty-eight thousand dollars for additional military supplies.

Captain Coghlan of the United States navy, delivered his lecture on the Battle of Manila, to over eight thousand people at the Winfield (Kansas) Chautauqua Assembly.

A life-sized gold figure of an American girl will be Colorado's exhibit at the Paris Exposition in 1900. The figure will contain nearly a million dollars worth of gold.

The Makawell Sugar Company of San Francisco has been incorporated with a capital stock of five million dollars, and will do business in the Hawaiian Islands.

Major-General Wood, military governor of Santiago, dined with his fellow-graduates of the Harvard Medical School at their annual banquet.

General Horace Porter, the United States ambassador to France, gave a brilliant party at Paris recently. Thirteen hundred invitations were issued.

The Colorado smelter employees have appealed to the State Board of Arbitration to have their case handled for settlement.

The new French Cabinet has received the sanction of Parliament by substantial majorities in both Chamber and Senate.

The Navy Department will not appoint a court of inquiry into Schley's conduct unless the Rear-Admiral requests one.

Owing to Mrs. McKinley's health, the President has indefinitely postponed his proposed trip to the Pacific coast.

Admiral Dewey sailed from Colombo, Ceylon, June 28. His next stop will be at Port Said.

A Christian Science Testimony.

At the Wednesday evening meeting held in Christian Science Hall, the Rev. C. D. Reynolds of Lancaster, N. H., briefly gave his reasons for resigning his pulpit and declaring himself a Christian Scientist.

"My coming into Christian Science," said Mr. Reynolds, "seems in a measure accidental, if there is such a thing as accident. A lady attending my church, who was a great sufferer and invalid, was induced to go away to Portland to a Christian Science healer for treatment. In about three weeks she returned and some time thereafter I called upon her. Her changed condition was evident. She told me that she was able to work and was really on the safe road to the best of health. I rejoiced with her and told her so. I wanted it to be true, but was sceptical, for it seemed too good to be true.

"I had just read a sermon against Christian Science by one of our prominent clergymen. The preacher seemed to me to be unnecessarily, if not unjustly, harsh, and I now determined to look into the subject for myself and preach a sermon on Christian Science, not to condemn, but to get, if possible, at the very bottom of the subject, and expose, not Christian Scientists, but the fallacious principles upon which they base their work.

"This good lady explained to me what little she had learned on the subject from her healer, and offered to let me take with me the literature she could then spare.

"It is strange how a combination of circumstances are sometimes thrown together to prepare one for the reception of new things. Only a few weeks before my physician had made an analysis of my physical condition and plainly related what I must necessarily look forward to in the way of physical suffering and mental dejection.

"I went home that night with the book, Science and Health, and other literature under my arm. A new hope seemed to be springing up. What if this should be true? It was true. That very night I made my first demonstration over my health. I felt myself getting well, symptom after symptom disappeared. I then and there made the solemn promise that if I could make myself absolutely free from pain and in addition to being well, could make Christian Science consistent with reason, I would enter the field, for the world is in need of a more effective religion.

"To-night I am fulfilling that promise, and I am in possession of a key I had long desired—a solution of the problem of spirituality."—*Concord Evening Monitor.*

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. — CAMILLA HANNA, C.S.D Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

The Future of Christian Science.

BY BENJAMIN A. GREENE, D.D.

IT has a future. How far into the years it will project itself, how widely and thoroughly it may spread, no one can predict. This much can be said, and ought to be said, to some who treat the whole question with explosives of disgust: it has a future because it has a vigorous, phenomenally growing present, because, at the heart of this growth, disagree and dissent as we may, there is forcefully evident profound conviction, sincere reverence, such a sense of discovery and victory in daily experience as to make many lives radiant with joy and hope. We judge the future by what the present holds.

Accelerating Momentum.

Letters of inquiry sent to persons outside of Christian Science circles, in eighteen representative cities of our country, bring back word that it is still making headway, and in most places with a greatly accelerated momentum. This testimony is confirmed and very largely supplemented by official publications, weekly and monthly, which I have carefully read. In New York state they claim that the number was doubled last year. In 1867, Mrs. Eddy had one pupil. To-day we find in the "Directory of Christian Science Practitioners" over two thousand names with city and street address. Every state in the Union is found there, also Canada, England, Scotland, France, Germany, Hawaii, and China. The text-book, Science and Health, has gone through one hundred and sixty editions, and the call is for more. Three weeks ago Mr. Kimball claimed in his Chicago lecture that Christian Scientists had nearly two million instances of healing. Make such allowances as the most sceptical insist upon; even then you have a bulky, vigorous fact striding to-day where it was creeping only yesterday. It has emerged from the silence of contempt. Editors, ministers, medical clubs, legislatures, give it attention. Such an aggressive force is bound to project itself yet further. It has a future.

A Few Particular Features.

The uniform report is that their services show a happy and contented company. Something gives them joy. Not many houses of worship have been built; but when they build, they dedicate free of debt. It takes conviction to use the pocketbook in that way. The *Sentinel* and the *Journal* give in every issue a large number of letters. Hard-headed business men, as well as women and farmers, open their hearts in testimony; specify as to the healing that has come to their home, sagacity and poise to their business management, and spiritual calm to their minds; and then give name, city, street, number. Just such testimonials are coveted by *materia medica* and orthodox churches. They are willing witnesses, and zealous in distributing literature. In all this we must admit "promise and potency" for the future.

The Use of the Bible.

Though this is eclectic, fragmentary, and, now and then, flagrantly absurd, still there is a vital joining upon underlying principles: namely, the divine immanence, the communion of man with the Infinite, casting out fear through love, gaining peace through staying the mind on God, divine Power and promise to heal all manner of diseases. In the last particular they claim a fidelity to Scripture superior to that of their critics. They claim to demonstrate the truthfulness of their position in that they do actually cure disease without the use of drugs. Leaving the nature of the cures until later, let it be noted that Christian Science insists on keeping its teaching blended with Bible teaching. The mind comes in contact sympathetically with some of its vitalizing truths. Such buttressing gives strength that promises endurance. Even the novel interpretation awakens interest in the Bible never dreamed of before. Bringing great truths to bear upon every-day worries, fears, ailments, and securing thereby quiet of mind and health, invests that interpretation, in spite of all imperfections, with a glory it will be hard to dissipate. Let the man who applies the whole Scripture to his whole self cast the first stone.

The Large, Waiting Clientage.

There is no fact more evident than that of the misery and restlessness of mankind through disease. How many million dollars are paid annually for patent medicines to heal "chronic lingerings," and that too after other millions have already been paid to physicians! If there be such a thing as "the law of supply and demand," here is a condition of things that will continue to make large demands. And among the people there seems to be a sort of hygienic-messianic expectation. Some are looking for deliverance through a discovery of microbes; others for telepathic channels through which the health of God may surge in upon the ills of man. Christian Science is in search of the man who has tried physicians, baths, travel, climate, and tried in vain. And when healing comes in the last resort, the mind is in a receptive mood for whatever teaching accompanies it. Especially the idea of union with the Infinite, bringing calm, trust, hope, and power over bodily conditions, is a revelation, a joy. Many cling to that, and are made staunch converts. The accession of happy converts makes the future sure.

[Extract from an article in *The Standard*.]

Corner-Stone Laying.

Two o'clock yesterday afternoon, was the occasion of the laying of the corner-stone of the beautiful temple now being erected at the corner of Twelfth and Felix Streets. This was attended by a large concourse of people not only of Scientists, but of all classes. The service as conducted by Mr. C. M. Howe, was very simple, consisting of singing hymn 170, "How Firm a Foundation," from the Christian Science hymnal, and reading from Psalms 125 and 126, also Matthew 21 : 42, then from "Science and Health with Key to the Scriptures," by Mary Baker Eddy, page 136 to bottom of next page, followed by silent prayer, with audible repetition of the Lord's Prayer, and reading from "Miscellaneous Writings," part of an address by Mrs. Eddy at the laying of the corner-stone of the Mother Church in Boston; this was followed by a short address by Mr. Howe, closing with hymn 81

Digitized by Google

in the Christian Science hymnal. Delegates were present from Kansas City, Maryville, Savannah, Bolckow, Darlington, Osborne, Cameron, Parnell, Washington, Seneca, Hastings, Creston, Waverly, and other places.

St. Joseph (Mo.) Gazette, June 13, 1899.

The corner-stone is of Concord granite and bears the inscription, "Jesus Christ himself being the chief corner-stone."

Science and the Press.

THE following extracts are taken from an article appearing in a recent number of the *Assayer,* published in Philadelphia, Pa.

"Whom the gods would destroy they first make mad."

The screaming of the subsidized press, and especially that of New York state, against the Christian Scientists, is an indication that the swine of selfishness has been disturbed.

What have these people done to bring down upon their heads the wrath of the modern Cains?

If trying to emulate the example of the Nazarene by living pure and undefiled, by manifesting deeds of love and charity, by putting into daily practice what the Saviour taught, are deeds of crime to be dealt with according to our criminal code, why, then these people are guilty of ten thousand times ten thousand violations of such law, and should be punished according to the legal statutes that govern in such cases.

While in the city of New York recently, the writer visited the office of one of the distinguished jurists of the Empire State. The conversation drifted to the subject of the prospective prosecution of the Christian Science practitioners.

The Judge inquired, "What do *you* think of this prosecution?"

"There is no Constitutional law in existence, and none can be framed, which will cover such cases," was the reply.

"Yes, of course," said the great jurist; "but you know as well as I, that the Constitution is always construed to meet the demands of interested parties—when the latter happen to have the ear of the party bosses."

After a thoughtful silence the Judge musingly continued, "The real animus behind this prosecution lies in the fact that the Christian Scientists are curing so many people whom the doctors cannot help, that it is driving thousands of sick and helpless from the physicians to the Scientists. Furthermore, and more urgently," he continued with a smile, "the Science is cutting so deeply into the practice of the regular physicians that they have felt compelled, in self-defense, to apply to the district-attorney to assist them, by process of law, to exterminate the practice of Christian Science."

"What about the legality of such proceedings, Judge?"

"By creating a strong public sentiment against the unlicensed practice of Christian Science, it might be possible to build up a foundation upon which could be erected a criminal statute prohibiting the practice," was the reply. It need only be added that the eminent lawyer above quoted is not a Scientist nor a believer in the Christian Science doctrines. He is a man of a very liberal habit of thought and is very near to the powers that be in New York City, and gets his information concerning the anti-Science movement in that city direct from headquarters. He does not understand Mrs. Eddy's teachings, but his incisive and penetrating legal thought unconsciously uncovered the motive and the *modus operandi* of the journalistic condemnation of the Christian Scientists.

Millions of people bless with grateful voices this Christianity which gives them health and liberty to enjoy, to protect, to transmit, and to spread. They hail the day that summons them to do noble battle in this cause of Truth, and cheerfully recognize the duty they owe the world which they have roused. The Christian Scientists have lured the spectre of death from the couch of suffering humanity, and helped awaken the world to a realization of man's high destiny. They have instilled into him a resolution to enjoy the precious fruits of life, irrespective of the canting harpies of the press, or the tyranny of material ignorance which would chain their fellow-men under the guise of law.

Bowed beneath centuries of failure, the legalized infamies of this day, while professing to protect the public in the enjoyment of its rights, are in reality making a desperate effort to shield from the future their crimes of the past. Invisible evil has ever waged a ceaseless and universal war against the freedom of mankind; it has never failed to display its relentless hatred of religious and civil liberty. Steeped in vice, it claims to be the delegate of virtue, and under the pretence of benefiting the race, it would, by legislative means, wrap the world in darkness, in order that the legal reign of despotism should be supreme.

What the first gun of Bunker Hill was to the civil rights of man, Christian Science is to man's religious liberty; like the gentle essence of a spring-day sun to the many worlds that pendant hang within the universe of God. It is the light that illuminates the heavens of all nations, a spark that soon fans into flame the slave's desire for liberty and nerves the peasant arm to heroic deeds for freedom. Well may it attract the thought of the rulers as well as the people in every clime. The former fear and tremble at its majesty; the latter's hope is well-nigh turned to joy.

The Boston *Arena,* made famous under the able editorial management of Hon. John Clark Ridpath and B. O. Flower, has fallen from the high plane to which the pens of these distinguished gentlemen had exalted that magazine. The contents of the May issue of the *Arena* indicate a degree of intellectual degeneracy wholly out of proportion to its past achievements. It cannot but be regretted that this magazine, which once focused the gaze of the American people by the brilliancy of its theories, must now be buried beneath a mantle of shame, clothed in a shroud of black magic.

Communion Service.

THE attendance yesterday morning at the First Church of Christ, Scientist, was very large, the occasion being holy Communion services, at which twenty-four members were received into the church. The rooms were beautifully decorated with magnolia buds and ferns. The services were conducted by Mrs. Annie Wood, First Reader, and Mr. Albert Doran, Second Reader; the citations from the Bible and "Science and Health with Key to the Scriptures," by the Rev. Mary Baker G. Eddy, were selected with special reference to the Lord's last supper and holy communion.

The services were brought to a close by the members, including the new ones, and all visitors, joining in holy Communion, the Christian Science conception of holy Communion being an absence of the unleavened bread and unfermented wine, being a true communion with God—Truth, Love, and Life—in silence, all kneeling in prayer. This Communion is so sacred to the Christian Scientist that preparation is made by continuously searching their lives to make them free from sin. These Communion services are held but twice a year.

The First Reader, Mrs. Annie E. Wood, addressed the new members, as follows:—

"Christian Science has thrown down the gauntlet and

Digitized by Google

challenges the world in open combat against sin, sickness, and death. The world accepts the challenge with gleeful avidity, and with a dogged and almost unreasonable persistency demands proofs of all the claims, and that we show ourselves at once perfect, even as the Father in heaven is perfect.

"So, now," speaking to the new members, "ye have chosen this day whom ye will serve. What does this word serve mean? It means much. It means to work for, to act as a minister of, to attend at command, to wait on, to help by good offices, to be sufficient for the purpose, to be of use. The Christian Scientist serves Life, Truth, and Love, not death, error, nor hate. Christian Scientists serve Mind, not matter; God—Good—and not evil. He who recognizes Christian Science as the second coming of Christ sees wisely and well.

"In accepting Christian Science he accepts its organizations, which are necessary to its growth, prosperity, and triumph at this point of the work. It has been well said that love is spelled l-o-y-a-l—loyal and steadfast to every call and command. The true Christian Scientist recognizes the privilege to contribute to the growth and prosperity of the church, so that he can look around and say he has done what he could. We are God's handiwork, in all forming a beautiful mosaic. Each one is to fill his niche, and will give a hearty response to every call that may be made. Every member is required to be obedient that he may eat of the good of the land; every one is daily to read the Holy Bible and his text-book, 'Science and Health with Key to the Scriptures,' by the Rev. Mary Baker G. Eddy. Each one is familiar with the points marking the true disciple as given in our text-book, Science and Health.

"We ofttimes hear the query, 'Is a man a Christian Scientist who deliberately pursues his old habits, says this wrong thing, does that wrong thing, etc?' Our text-book says: 'It is Christian Science to do right, and nothing short of right-doing has any claim to the name. To talk right and live wrong is foolish deceit, doing one's self the most harm.' Do we have such persons in the Christian Science Churches? Certainly. We do not take saints into our churches, but sinners. We do claim for the teaching of Christian Science that it has given us a better understanding of God than we have ever had before, which enables us sooner to rid ourselves of our old faults, and finally eradicate every error. The promise is true, the hidden things of wickedness and righteousness shall be revealed."

Florida Times-Union and Citizen.

The Lectures.

At London, Eng.

From the headquarters of the Christian Scientists in London (writes a *Daily Chronicle* correspondent) I received only yesterday morning (Monday, June 5) an invitation to attend a lecture announced for the same afternoon at Queen's Hall, Langham Place. The card was a modest little affair, such as would be issued by any humble religious body addressed to its supporters, but the name and style of the lecturer attracted me, even surprised me into canceling another engagement in its favor. He was described as William N. Miller, Esq., Q.C., C.S.B. Thinking I could not be mistaken in omitting from my recollection any such English Queen's Counsel, it was an obvious thing, for a moment, to suppose that the letters "Q.C." were as cryptic as the letters "C.S.B." So, too, it was natural to expect in such a hall, for such a purpose, on a sultry summer afternoon, only a few devoted adherents of the new sect hungering for spiritual pabulum.

Judge of my surprise on finding Queen's Hall—the large hall, be it remembered, Mr. George Grossmith and Mr. Albert Chevalier sharing honors in the smaller halls—well filled with one of the most fashionable audiences of the season. Mostly ladies, to be sure, but all apparently from the upper ranks of London society. Here and there a group could be seen attended by fathers, husbands, or other male relatives, but certainly a most gaily attired array of disciples. Whether this means that the new cult has already become fashionable or not, it must be left for others to determine. A Liszt or Paderewski recital could not have commanded the presence of more charming millinery. Moreover, a peer (Lord Dunmore) occupied the chair, and introduced the lecturer.

He proved to be Mr. W. N. Miller, Q.C., of Toronto (said to be a very distinguished and capable colonial lawyer), whose presence and manner, as well as his clean-cut forensic style, instantly attracted attention. It would scarcely be too much to say that they instantly commanded respect, for he was clearly not a lawyer speaking to his brief, but a whole-souled convert—with a warrant of personal experience. Thus proving to be a real Queen's Counsel, learned in the law, it was disappointing to learn that the other initials attached to his name only indicated the degree he had taken at the university established by the Scientists in the State of Massachusetts, which is only that of Bachelor, whereas Mrs. Eddy's publisher is the proud possessor of a Doctorship—not a medical doctor's degree, of course. Mr. Miller began by explaining how he had become a Christian Scientist. He and Mrs. Miller had belonged to an Orthodox Church. They had a son who, in spite of all medical skill they could command, had died, and in their sorrow they were led to the Christian Scientists, from whom they speedily learned that "God is Life, and death an enemy not to be submitted to." Thus, they perceived that Christian Science was primitive Christianity revived, and its method of healing never surpassed except by its first demonstrator, Jesus Christ.

This, and the development of the lecturer's argument, proved to be clear enough. When he went on to give his personally authenticated cures the audience was still further constrained to attention. But most pathetic, most glorious of all, was the cure of a deaf man. Needless to say that man was himself! Loud cheers might have been expected at this point, but they were not forthcoming because there was little evidence before the audience that the deafness was considerable or the cure complete.

Satisfied himself, however, the lecturer warmed to his work, and speedily gave proof of the larger claims which the Christian Scientists now audaciously put forth. "It is time that the world should see what the work of Christian Science is! It is the Second Coming of the Christ, doing the work that he did, healing the sick, raising the halt and lame, giving sight to the blind!" Other systems of Christianity were unexplainable, and some did more harm than good. Christian Science reconciled reason with religion. Under it sickness would disappear, death be conquered. Its medicine was Mind, that of the doctors matter. And all this had been rediscovered thirty years ago by Mary Baker Eddy. She it was who rediscovered that Science by which Jesus healed the sick. And why Mary Baker Eddy? Because she had been specially fitted for it by study of the Holy Scriptures.—*London Daily Chronicle.*

The *West London Observer* gave in addition to the following, a good synopsis of the lecture.

On Monday, June 5, a lecture was delivered in Queen's Hall, Langham Place, by Mr. W. N. Miller, Q.C., C.S.B., of Toronto, Canada, on the above subject. Notwithstanding the sultry weather the large hall was well filled.

The Earl of Dunmore, who presided at the meeting, rose to introduce the lecturer, and said,—

Ladies and Gentlemen:—Having been invited to preside

Digitized by Google

at this meeting, one of my first and most pleasing duties will be to make known to you the distinguished lecturer who is about to address you this afternoon. Mr. William Miller, Q.C., of Toronto, is a Canadian gentleman of high attainments, who has risen, by his personal merits to that distinguished position in the legal profession that the title —Queen's Counsel—denotes. The lecture to which you are about to listen will be delivered under the auspices of the International Board of Lectureship of the Mother Church at Boston, Mass., of which Board of Lectureship Mr. Miller is not only a member, but is the duly accredited representative delegated to come to this country and address, as he is about to do this afternoon for the first time, a London audience. This Board of Lectureship has been recently established to meet the growing demand for knowledge of Christian Science, and also to appoint properly authorized persons to reply with authority to the many inquiries made from different parts of the world regarding this Science. It is therefore under these auspices that Mr. Miller will address you to-day, his subject being, "A Bird's Eye View of Christian Science." I believe the proper definition of the word science to be "Knowledge reduced to a system," and the definition of the term Christian you all know as well as I do to be one who believes in, and is a follower of Christ. Hence we may assume that the theme of this afternoon's discourse will be the propounding of the knowledge of those laws and principles which relate to Christ and to his teachings. I think I may fairly say, and without risk of contradiction, that there has never been a period within the history of mankind when religious thought has been so diligently employed as at the present time, when many deep thinkers are earnestly striving to elucidate and solve many of those knotty religious problems that have for so many generations baffled human intelligence. We live in an age of progress when new theories are being constantly evolved and new conclusions perpetually deduced, in an age when the spiritual activity of mankind is making itself felt in the anxious research after the real Truth of Being. Of Christianity in the abstract we have all of us been familiar since our childhood days, but of Christianity as a science, and as it will be defined this afternoon by the distinguished lecturer, I venture to think many of us here are in utter ignorance. The truth about any doctrine is more or less of an interesting subject, but the truth concerning the great scientific proposition, which now at the close of the nineteenth century is engrossing so much public attention, cannot fail to be of paramount interest to many here present. Free investigation into the working of this Science, as into the working of any other religious organization, is the recognized right of every man and woman in this country, where freedom of thought obtains, for no one can be expected to believe in a thing before it has been explained intelligently to them and reached their understanding. But if, after due investigation into the working of this Science, any of you should find a valid justification for its existence in the fact that it does, according to your experience, make men and women happier, or bring mankind nearer to God, then I say you will owe a deep debt of gratitude to the Discoverer and Founder of this Science, the truth or falsity of which does not depend upon human judgment. If it prove false, then no human power can ever sustain it, but if it prove true, then no human power can ever prevail against it. I shall therefore now ask you to give your earnest and respectful attention to the words that fall from the lips of the lecturer. I ask you to give him a fair hearing, and to his subject a fair and candid consideration. With these few words I have much pleasure in introducing Mr. Miller, Q.C., who will now address you.

At New York, N. Y.

The Metropolitan Opera House was well filled Sunday afternoon, May 28, by an audience of upward of three thousand people who gathered to listen to a lecture on Christian Science, by Carol Norton, C.S.D., of this city.

The lecture was under the auspices of the fourteen Christian Science churches in the metropolitan district. A fourfold review of Christian Science, religious, therapeutical, legal, and scientific, was the subject of the lecture, which consumed nearly two hours in its delivery.

Judge S. McArthur Norton, of Allegany County, presided. He was presented to the audience by Rev. W. P. McKenzie, C.S.B., of Cambridge, Mass., member of the International Board of Lectureship, in the following words:—

Because I am a visiting member of the Board of Lectureship I have been asked to be the herald to announce to you the name of the presiding officer of the meeting, and lest there should be any misapprehension when it is learned that the name of the chairman and the lecturer is the same, and it should be thought that this is a family matter, I will say that they are not relatives; indeed, that they have only been acquaintances for a short time; and that this acquaintanceship is a sample of the friendship and the brotherly interlinking of affection which is being expressed between good men and Christian Scientists all over the country. They are recognizing that Christian Science gives the most practical form of benevolent and Christian action.

About six weeks ago there was a lecture in Brooklyn, presided over by Judge Hatch of the Supreme Court. The gentleman who is to preside at this meeting is, I believe, a life-long friend of Judge Hatch, and belongs to the same judicial district. I will present to you S. McArthur Norton, Judge of Allegany County, and I would remark before taking my seat that the Judge hails from Friendship, which is a town near to Amity, and in the same neighborhood as Angelica, so that we can judge beforehand somewhat of his kindly disposition. I have much pleasure, in fact I count it an honor, to present to this audience Judge S. McArthur Norton.

Judge Norton then introduced the lecturer, saying:—

This is an age in which many people think for themselves; in which many people like to investigate the truth of matters which are brought before them. There is a large class of people who do not care to give any new idea a fair trial. People are less tolerant in matters of religion than in any other subject which may be presented to them. Christian Science is not new.

The idea has perhaps recently been promulgated. It has been before the people of this country for only about thirty years; but the Scientists say this same idea prevailed and was practised over two thousand years ago; that if diseases of the body could be healed then why not now; that this religion is founded upon the Bible, and takes the Bible for its corner-stone. It is not new, nor is it any fanaticism, as it has frequently been styled, but is a religion which has the same object in view that the religion of all other churches has, except it adds to the saving of souls the saving of the human body.

We hear much said and much discussion with reference to this matter recently, and with reference to the legal aspects of it, upon which the lecturer to-day is going to give you some ideas. One of the oldest ideas of this government, and of this country, is that to every man belongs life, liberty, and the pursuit of happiness in his own way, that he may worship God according to the dictates of his own conscience. These people, who are devout and religious, believe that the ills of humanity may be alleviated by this same religion without the aid of drugs, without the aid of medicine, but by the divine Power, which is the power behind everything that is good. Are they to be

Digitized by Google

allowed that freedom? can legislation reach and affect the rights of people to worship as they believe, to heal as they believe? A religion which makes people happier and better and stronger, that makes them better citizens, is a religion which none can condemn. All they ask is a fair investigation.

Many of you, many of us, know something of what Christian Science has done. I know of my own knowledge what has been accomplished in the vicinity where I live. I know that men are made better, that their spiritual welfare is promoted, that the ills of the body are healed, and that great good has been accomplished through the instrumentality of the doctrine of this faith.

In order that the people of the world may understand this, because there are large numbers now who believe in it and who are making this a study and trying to come to an understanding of it, an International Board of Lectureship has been established, so that lectures are given to audiences like this all over the world, that the doctrines and the good of those doctrines may be freely disseminated,—and that you may understand, we are gathered here to-day.

I have had the honor of being called upon to present to you the speaker, a man who has made this a study and who has been among the foremost in its ranks for a number of years. I regret to say that I have not long been familiar with this doctrine, but I am glad to say that I am now a student of this theory and of this idea, and hope to know more about it, and I certainly must say that I have a strong belief in it. I have great pleasure, ladies and gentlemen, in introducing to you the lecturer, the representative of the International Board of Lectureship, a gentleman who is undoubtedly better acquainted with you here than I—Mr. Carol Norton, C.S.D., of this city."

Mail and Express.

At Wilmette, Ill.

Saturday evening, June 3, Mr. Edward A. Kimball gave a lecture on Christian Science in Library Hall, under the auspices of First Church of Christ, Scientist, of Wilmette, Ill.

The hall was well filled and the lecture was listened to with the closest attention. Mr. Louis J. Pierson, a prominent lawyer, introduced Mr. Kimball in the following words:—

Friends:—If Christian Science be true it is the most profound fact of the nineteenth century. If Christian Science be from on high, it will revolutionize the twentieth century. From time to time in the world's history some master mind, some mighty fact, has given a name to a period or an epoch.

Homer sang of the Trojan war and the time of which he sang will be forever known as the Homeric Age. Pericles, that princely genius and that genius of princes, led the thought and action of the most brilliant period of the world's history, and it is the universal verdict of mankind that his age was the age of Pericles.

Shakespeare and his cotemporaries glorified the reign of Queen Elizabeth with the greatest literary productions of the human brain, and thus established and designated for all time the Elizabethan Age.

Will our age rise above the dead plain to that height of greatness which will give it a name as a marked epoch, a distinguished age? If so, will it be the age of steam and electricity, the age of millionaires, the age of trusts, or the age of the renaissance of Christ-knowledge?

The future alone can answer, but—the present can prophesy. Christian Science is destined to one of two fates. Either it will accomplish an all-conquering success and sweep the earth with its power, or it will fail utterly. Its claims are extraordinary. It is more than a creed. It occupies no middle ground of compromise.

If it fails it will be because it is but a half-truth magnified into the semblance of a whole truth, by finite power.

Ten thousand issues sleep in the deep grave of oblivion because they were but half-truths. Mark the fact. The whole truth is God-like and never fails, but half-truths mingled with unwarranted or false human claims and pretenses, die the death. Christian Science has truth in it. It is a perfect, God-given truth or a half-truth. If its claim be divinely true, then we all want it.

Its temples of worship are rising in every hamlet and village and city. Its devotees are increasing in numbers by thousands and tens of thousands. It is a living, active fact. Let us hear its claims. Let us listen, consider, and judge. It may be vital and all-important to you and to me. With these possibilities in mind, I take pleasure in introducing Mr. Edward A. Kimball, C.S.D., the lecturer of the evening.

At Chicago, Ill.

Under the auspices of Second Church of Christ, Scientist, of Chicago, Edward A. Kimball, delivered a lecture, Monday evening, June 12, at the Jewish Temple, corner Goethe and La Salle Streets.

Although the first notice of the lecture was given but five days before its delivery the church was filled with an intelligent and most appreciative audience. Many of the most prominent people of the North Side were present. Mr. Kimball took for his theme "The Promises of Christian Science;" he was introduced by Mr. Bicknell Young, First Reader of the church, who spoke as follows:—

Ladies and Gentlemen:—Second Church of Christ, Scientist, of Chicago, invites you as its guests this evening, to listen to a lecture upon the subject of Christian Science by a member of the Board of Lectureship of the Mother Church. This is both a pleasure and a duty. A pleasure because we never tire of learning more of this infinite Science, and a duty that we gladly fulfil towards you in giving you an opportunity to learn something of what it really is and possibly of having some erroneous impressions corrected.

If any one of you knew of a system of medicine that healed a greater proportion of its patients than any other system ever discovered, if you knew that its practitioners accepted the responsibility of so-called incurable cases as readily as the so-called curable, and healed them with equal facility; if in addition to all that this system healed broken hearts, revived prostrate hopes, and reformed blighted lives, would you not desire to have the whole world know of it? Christian Science does all that and more. I often think of some lines in Portia's speech from the "Merchant of Venice," for like "the quality of mercy" Christian Science

> is not strain'd;
> It droppeth as the gentle rain from heaven
> Upon the place beneath: it is twice bless'd;
> It blesseth him that gives, and him that takes:
> 'Tis mightiest in the mightiest: it becomes
> The throned monarch better than his crown.

You will not, of course, expect to gain a demonstrable knowledge of the Science of the Infinite by listening to one, or even several lectures, however able, but you will have the subject introduced to your notice and your further progress will then depend upon yourselves.

The gentleman who is to speak to you is eminently qualified for this purpose. Since he was healed, some ten or twelve years ago, through Christian Science, of diseases that had been pronounced incurable, he has been engaged as a Christian Science healer, in healing the sick, reforming the sinner, and in binding up the broken hearted.

I have the honor to introduce Mr. Edward A. Kimball of this city.

L. I. S.

At Waterford, Wis.

The lecture on Christian Science delivered here Friday evening, June 9, by Edward A. Kimball, C.S.D., of Chicago, was one of the greatest blessings that ever came to this part of the Field. No lecture could have been more appropriate for the occasion, and the power and influence of Christian Science was felt.

The lecture was given under the auspices of First Church of Christ, Scientist, Norway, Wis. Our church being located in the country the lecture was held in the Amusement Hall at Waterford, the nearest town. This village has a population of about eight hundred, and we had an audience of over four hundred.

Mr. Kimball said this was the first lecture he had delivered aside from a station; another feature of the event was that there were no Scientists in the town where the lecture was held. The fact that we were enabled to have such an eminent speaker lecture at this point has been highly appreciated. The speaker was introduced by S. J. Haugan, who spoke as follows:—

Ladies and Gentlemen:—We are living in an age of progress—progress in agriculture, art, mechanics, and the different sciences, and why should there not be progress in religion, the question that most of all concerns our well-being.

Christian Science is a practical religion based upon a demonstrable principle as unfailing as the science of numbers when correctly understood and applied.

The Scriptures glow with golden promises, yet humanity interprets this to mean in the great beyond, while Christian Science proves that these promises can be realized here and now.

Much abuse and ridicule has been heaped upon this Science because of people's ignorance of its teachings and principles. In view of this a Christian Science Board of Lectureship has been established, of which the gentleman with us this evening is a member, and thus he speaks with authority. I now take pleasure in presenting to you Edward A. Kimball, C.S.D., of Chicago.

CARRIE A. HAUGAN, Clerk.

The following is a clipping from the *Waterford Post:*—

The lecture on Christian Science by Edward A. Kimball of Chicago, drew a large audience, notwithstanding the numerous other attractions the same evening. The gentleman is a speaker of merit, and made some very strong points. It was entertaining and instructive and certainly filled the purpose of explaining the principles of Christian Science.

At Dayton, O.

Wednesday, June 21, was an eventful day for the Christian Scientists of our city. The audience assembled at the Opera House comprised many of our best citizens, who evidently were desirous of learning more of that truth which is attracting the attention of thousands of people throughout our land. The fundamental principles of Christian Science were presented in an eloquent manner by Judge W. G. Ewing, and no thinking man or woman could leave without seeing that Christian Science is purely Christian, founded wholly upon the Scriptures. Those unable to attend, not only missed a very interesting lecture, but a treat of oratory, as Judge Ewing, late of the Superior Court of Chicago, is an orator, well known throughout the West. In conversation with the Judge, he informed us that he was led to Christian Science through being healed by it of ills that *materia medica* could not reach.

Judge Ewing was introduced by Judge Dustin, of the Common Pleas Court, who said:—

I am not yet a believer in Christian Science, but I am a believer in fair play, and in giving every honest man, sincerely desirous of doing good to his fellow-men, a respectful hearing upon any subject of religion, science, or policy, or in public interest, especially where its only object and purpose is to pacify the hearts, ennoble the soul, and heal the bodies of men.

The remarkable progress of Christian Science in the last ten years indicates to us, who are yet unbelievers, that there must be something in it worthy the attention and consideration of every thinking man. And it is fortunate for us that we have the opportunity this afternoon to hear upon this interesting doctrine, one of its most learned and distinguished advocates, in the person of Judge W. G. Ewing of Chicago, whom I now have the pleasure of introducing to you.—*Evening Herald.*

At Newark, O.

William G. Ewing, late judge of the Superior Court of Chicago, delivered an impressive lecture at the Auditorium Saturday evening, June 17, on Christian Science. The lecture was given under the direction of the First Church of Christ, Scientist, of this city, and was listened to by a very large audience.

Judge Ewing is an intellectual man. His diction was refined, his language that of a jurist but invigorated with an earnestness seldom heard in an argument to a jury.

The speaker, who was entertained while in the city at the home of Mr. and Mrs. Henry S. Fleek, as well as all the members of the Newark church, were much gratified at the large attendance and at the interest taken in the lecture.

Daily Advocate.

The lecturer was introduced by Judge Jonathan Rees in the following words:—

Fair play is a prominent quality in the American character, and has taken form and substance in the organic law of the land, that no one shall be condemned without a fair and impartial hearing. Reposing in this marked American trait I bespeak for the distinguished lecturer this evening an intelligent, patient, and unbiased hearing of the exposition of the cause he advocates. And that so many good and eminent men and women are to-day with sincerity and zeal devoting themselves by words and works to this cause, is an added reason why I should with confidence engage for the speaker an impartial audience. And now permit me to present to you the speaker, who has surrendered a lucrative and honorable place to work for the cause he has espoused, Judge Ewing of Chicago.

At Keokuk, Ia.

A fine audience accepted invitations to attend the first lecture given in this city, June 20, by a member of the International Board of Lectureship, Judge W. G. Ewing of Chicago. In introducing the lecturer, Mrs. Frances Nagel, First Reader of the Keokuk Church, said,—

Friends:—You do not know what a pleasure it is to us to invite you to our feast to-night. We have for you a loving message, and we ask you to listen. It was Love that brought our Saviour into this world with his God-given message of life for all mankind. It was Love that brought the Discoverer and Founder of Christian Science, Mary Baker G. Eddy, into this nineteenth century with her message of Truth, and it is Love that has invited you here. In Christian Science, "Love is our God," who gives us happiness and health, lifts from our shoulders all the heavy burdens of sorrow, age, business cares, poverty, and sin.

That you may learn something of this wonderful gospel of peace on earth, we ask your careful attention to one who speaks with authority. It is my privilege to introduce to you a member of the International Board of Lectureship of The First Church of Christ, Scientist, of Boston, Mass., the Hon. W. G. Ewing of Chicago.

MRS. AVARILLA P. DOLLERY, Clerk.

Digitized by Google

At Oskaloosa, Ia.

The Opera House was well filled Friday evening, June 23, with an audience of Oskaloosa's investigating people.

A. P. Spencer officiated as chairman of the evening, and after a few preliminary explanatory remarks introduced Mrs. Ruth B. Ewing of Chicago, who spoke for about ten minutes.

The chairman then introduced the speaker of the evening, Edward A. Kimball, C.S.D., who entertained his hearers with an earnest and interesting lecture for upwards of two hours. Those who listened to him could not help but feel that the lecturer believed implicitly in the faith he so eloquently espoused. He gave much food for reflection, and it is safe to say that none of the large number of intelligent people present regretted having spent their time with him.

The *Journal* will give a synopsis of the lecture in Monday's issue.—*The Oskaloosa Daily Journal.*

At Cadillac, Mich.

Thursday, May 18, we had the pleasure of listening to a lecture on Christian Science by Edward A. Kimball, C.S.D., of Chicago. Every seat in the Congregational Church was filled, and the lecturer was introduced by the pastor of the church. We are only a small band, and when Mr. Kimball sent us the date of his lecture we only had half enough money, but the balance was raised in about five minutes at the Wednesday evening meeting, showing us plainly that there is no lack of means to spread the Truth. Scientists came from Manton, Kalkaska, Mancelona, and as far north as Boyne City, and were all delighted with the lecture.

MARY LOUISE RUSSELL.

At Kirkwood, Ill.

Edward A. Kimball of Chicago, addressed a large and attentive audience at the Opera House, Tuesday, June 20. The audience embraced many of the most intelligent people of Kirkwood, who gave very good attention for an hour and fifty minutes. Mr. M. J. Higley of Burlington, Ia., introduced the speaker in a very able manner.

Many Scientists came from neighboring towns to hear the lecture, including Galesburg, Monmouth, Roseville, Viola, Dallas, Biggsville, and Burlington, Ia., returning on night trains. We are greatly benefited as the result of the lecture.

L. B. FERGUSON.

At Chicago, Ill.

The lecture delivered by Mr. Edward A. Kimball, C.S.D., for the Third Church of Christ, Scientist, of Chicago, corner of Ogden Avenue and Washington Boulevard, was a thorough and comprehensive presentation of the principles and doctrines of Christian Science. The church, with a seating capacity of nearly one thousand, was filled, with many standing.

The speaker was presented by the First Reader of the Church, Rev. J. L. Fonda.

IDA G. STEWART.

Another Victory.

GOD is our Refuge and our Fortress, our Tower and our Defence, our Strength and our Shield. Again *materia medica* has failed in its organized effort to crush Christian Science. I am sure that the readers of the *Sentinel* will be interested to learn how, under the guidance of divine Love, the Second Church of Christ, Scientist, of Minneapolis, Minn., has been the means of saving the Christian Scientists of Minnesota from an iniquitous medical bill which was designed to prohibit the practice of Christian Science healing in this state.

One Sunday, last February, we learned that a medical bill, prepared by or for the physicians, and introduced in both houses of the legislature, had been by the judiciary committee reported back to the Senate and recommended to pass, and that its consideration and passage had been made a special order in the Senate for the following Wednesday afternoon. This bill made it a criminal offence, punishable by fine or imprisonment, to practise the art of healing, under whatever school or system of treatment or of healing, unless the practitioner had previously passed, before the State Medical Board, the same examination required of physicians and surgeons; and it furthermore authorized the State Medical Board to refuse a license or to revoke a license already granted, if the practitioner should obtain "any fee on the assurance that a manifestly incurable disease can be permanently cured."

This bill had been prepared with the utmost care and, if passed, would by its terms have made the practice of Christian Science a crime. Each day's practice was defined to be a separate offence, so that the law-breaker would soon have become liable to imprisonment for life.

Our church has among its members, their families, and friends, a number of influential men who, at this moment of extreme need, took a prominent part in the defence of our cause. Our thanks are especially due to one eminent statesman, long prominent in the public affairs of this state, who nobly and unhesitatingly devoted his entire time and influence to defeat this bill. Before Wednesday, we had, by earnest and honest work, secured the reference of the bill back again to the judiciary committee, with a hearing to be given to Christian Science at a meeting of this committee in the senate chamber on Wednesday evening. A large delegation from our church and its friends attended this committee meeting, and the senate chamber and galleries were packed with physicians, osteopaths, Christian Scientists, and the respective friends of each. Christian Science was first called upon to present its case, being allowed three speakers. These three persons were Abbot Edes Smith, C.S.B., our First Reader, Mr. Eugene A. Merrill, chairman of our board of trustees, and General William J. Hahn, the husband of one of our directors. After the cause of Christian Science had been thus presented, the physicians and osteopaths were also given a hearing.

The following day, Thursday, this medical bill was defeated in regular session of the Senate, and a special committee was appointed to draw a new bill which would do justice to all. The bill which this special committee reported and recommended, a month later, contained a section specifically exempting Christian Scientists from its operation. The physicians had completely failed in the effort to give what they thought would be a crushing blow to our cause. Subsequently, this legislature adjourned without passing any medical bill, thus leaving unchanged the present law, which does not in the least interfere with the practice of Christian Science.

LOUISE W. CHAPMAN, Clerk.

The Address of Mr. Smith was as Follows.

Mr. Chairman and Gentlemen of the Committee:—Over one hundred years ago, our forefathers founded a nation whose corner-stone is liberty. At the risk of life, they made the declaration, "All men are created equal." A third of a century ago, our beloved country sustained an awful sacrifice, to maintain and establish on a higher platform this fundamental principle of freedom. We are here to-night, not to beg a favor, but in the name of Almighty God, in the name of the Constitution of our country and of our state, to demand our right of religious liberty and of freedom of conscience.

And here let me emphasize the fact that Christian Sci-

Digitized by Google

ence is a religion. The Bible is its rule and guide of faith and of practice. It claims to be the primitive Christianity of Jesus restored to its original simplicity and purity, as taught by our great Master nineteen hundred years ago. The mission of Mary Baker G. Eddy, the Founder of Christian Science, which now has over one million adherents, has been to proclaim the importance of accepting, as the practical law of human life, the teachings of the Bible taken as a whole, in their simple and natural meaning.

The religion of Jesus, as Christian Scientists understand it, was and is essentially a religion of healing, mentally, morally, and physically. The command to heal the sick always accompanied his command to preach the gospel, and to-day Christian Scientists prove their faith by their works. Of the truth of this statement, were the present a proper time and place, the most overwhelming and conclusive evidence could be given; and if the committee should desire, any number of witnesses they may wish to hear will gladly testify, under the sanction of an oath, to the wonderful potency of this method of healing. The time has passed for mere denial. To one who investigates in the spirit of fairness, the facts speak for themselves.

The healing of Christian Science is by virtue of a Divine law, more or less clearly understood, which is in itself as eternal and unchangeable as the principle of mathematics. It manifests the power of the infinite Mind, the divine Principle, which we call God. The Bible teaches that the Infinite is no respecter of persons, and we claim that the healing power of Christian Science, derived from a spiritual interpretation of the Scriptures, is the same Truth which enabled Jesus, his apostles, and their followers, the early Christians, to perform the works of healing, which were called miracles by those who did not understand them. These works were manifestations, not of a special Providence, but of an eternal law, not yet fully understood. And to-day, the Christian Scientist who lives a life of purity and self-sacrifice can demonstrate that even a little understanding of the infinite love and power of God works wonders.

I have thus briefly given a hint of the nature of our religion, not with any thought of convincing you of its truth, but hoping you may realize the sincerity and earnestness of our conviction that enlightened prayer to God, which is our only method of healing, is a religious duty. You may believe the thousands of your fellow-citizens who have been healed by Christian Science in this state, equally intelligent with yourselves, to be deluded and mistaken, but you cannot deny to them the same right to their own opinions that you claim for yourselves; and the unrestricted right to pray and to be prayed for is guaranteed by the constitution of the state and of the nation. Think of it! Is it not absurd even to suggest that you should forbid your fellow-citizens, deluded though you deem them, to pray to God for the healing of the sick, unless, forsooth, an examination has first been passed in anatomy, chemistry, and obstetrics?

Who demands the passage of this bill? Certainly it has not been prepared and pressed by the people. Not all, but a part of the physicians of this state, in the same spirit which creates all trusts and monopolies, under the pretence of seeking to protect the dear people against the will of the people, from the ignorance of the people, are in reality seeking to protect themselves from the results of their own mistakes and failures.

When any theory or system of practice seeks a monopoly of the right to heal, and either to exclude other methods of treatment, or to measure their right to heal by its test, the burden of proof is upon such theory or system to show conclusively, not only that it is absolute and unchanging science and meets with unvarying and unqualified success, but that the other methods of treatment which it seeks to exclude or to test have never alleviated human pain or sickness. In this present case, no such claim is or can be made. Such a science will be universally recognized and will easily protect itself without legislative aid. Truth is mighty and it will prevail.

The Kansas Medical Bill.

PERHAPS it would be of interest to the readers of the *Sentinel* to know something of the attempted passage of the medical bill in the Kansas Legislature during the winter just passed.

As a member of the House, I had the pleasure of watching its progress from the cradle to the grave.

The Hanna Bill, as it was known, was introduced in the House and Senate simultaneously early in the session. Its provisions were intended to be very stringent, and to apply particularly to the practice of Christian Science, the clause defining the practice of medicine specifying, among other things, those who attempted to heal by "mental impression or otherwise."

In both House and Senate the bill was referred on second reading to the committee on hygiene and public health. It was soon recommended for passage by the Senate committee, and stood on the calendar subject to amendment and debate for several weeks.

The House committee, composed principally of M. D.'s, had it under consideration for some time. The Topeka Scientists were alert, and had copies of the medical supplement of the *News Letter* and some other literature distributed among the members of both houses. The members of the committee were quietly reasoned with, on the ground that while they might regulate the use of drugs if they chose to, they had no right to interfere with those who used no material means, but relied wholly on divine Power. They finally decided not to report on the Hanna Bill, but prepared a substitute which they recommended for passage, and which was as mild and harmless as a sugar pill.

When the substitute came up for discussion, one of the M. D.'s said that they had been trying for several years to get a decent medical bill passed in Kansas, but somehow or other they always seemed to be stepping on somebody's toes, and the bills failed to pass; but he hoped that there would be no failure this time, as the bill before the House was so drawn as to interfere with no one except those practising material medicine. There was but little debate on the bill, no objections offered to it, and only one or two minor amendments, and it seemed sure of passage. On the following day, however, when it was read the third time and the roll called on its final passage, the doctors seemed to have become disgusted with it, saying that it was too weak to be of any use, and so voted against it, thus ruthlessly slaughtering their own offspring.

In the Senate, the original bill stood on the calendar until near the close of the session, but was never considered or discussed; and when the calendar was revised, the medical bill disappeared, and died from inanition, and returned to the dust from whence it came.

H. A. BAILEY, Argentine, Kan.

Work in the South.

Dear Editor:—It was my earnest desire to communicate the contents of this letter to you in person while in Boston during our Great Feast, but your many duties and special engagements prevented my doing so. For the past nine months business has called me into the South, and my great desire to do something for the cause I so dearly love, prompted me to a special effort toward helping those

Digitized by Google

in my territory who, like us all, are doing their best to serve God through Christian Science, as taught by our beloved Leader.

I am sure it will be interesting to you to hear from the South, where, with but few exceptions, Christian Science is little known. The work done by a few faithful ones in many places is indeed a beautiful testimony to their fidelity and trust in God.

Many of them have been taught by teachers who are far from them, and in many cases they are at a loss to know just how to proceed in organizing their churches and meeting the many efforts of error to hinder the progress of Truth.

I wish to speak first and particularly of Jacksonville, Fla. I have been there twice within a few months, and have had ample opportunity to become acquainted with the work. Mrs. W., the First Reader of the First Church, is an earnest and loyal Christian Scientist; one who dearly loves the cause and Mother. From what I learned she has passed through the fire. She now has a very nice hall, well filled.

At St. Augustine, Fla., I met Mr. V., who is a machinist in the Florida East Coast shops. He is a bright, earnest worker, and although he has but about twelve followers, he has rented a small hall in a good part of the city and holds Sunday service and Wednesday meetings, he being the First Reader. In the face of all opposition at the shops among the workmen, and from those in other walks, he is going on winning over one at a time.

At Savannah the work is growing most beautifully, and the church at that point seems to be well managed, and the cause well served.

I cannot find time to tell you about the work at Atlanta coming under one of our brave standard-bearers, whom to know is to love. You are perhaps better acquainted with her work than I am, especially as lecturer.

At Charlotte, N. C., there lives a woman of whom I wish to speak, and whose fidelity to the cause of Christian Science is most wonderful. In this city of about fifteen thousand inhabitants two women are working to spread the Truth as taught by Science and Health, and against the greatest opposition on the part of relatives and friends, they daily stem the tide.

Mrs. H., of whom I wish to speak most particularly, was healed by Christian Science while at Baltimore, but removed to Charlotte, N. C., some time since, and has endured persecution from all her friends and relatives, and seems to stand alone except for one lady friend. She placed a copy of Science and Health and some Journals in the library and made the fact known, and asked some who opposed the cause so bitterly to get Science and Health and read it. A few called for it, but were persuaded by the lady in charge *not* to read it, stating that it was not a good book for any one to read. The pulpit of this place has been very active in opposing our cause.

At Charleston, S. C., there is a small body of Christian Scientists, earnest and honest in the cause. I am satisfied that this beautiful city, so much in need of Christian Science, would be a very good field for a good strong Scientist, and I feel sure that those at present in the work there would welcome such a one.

The same seems to apply to Charlotte, N. C.

At Macon, Ga., as you know, there is a church. This city to my sense is a very good Christian Science field. There are several very active workers but there seems to be a restless under-current.

I am only trying to do something to pay a debt I owe Christian Science for what it has done for me, and I feel that all I can do will be but a drop compared with what I owe.

I travel a part of Pennsylvania, all of Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Louisiana, Tennessee, and Mississippi, visiting most of these states several times a year, and it would afford me much pleasure to be of any service in advancing the cause so dear to me, without any desire to interfere in any way with those already in the Field.

Yours in Truth and Love,

GEO. W. SMITH.

A Lesson from a Coin.

BY WALDO PONDRAY WARREN.

ONCE there fell into my hands a plugged quarter. My first thought was to pass it on, as it had come to me unnoticed, and I felt entitled to receive as much in turn. My sober second thought was to do nothing of the kind. I could see that plugged quarter wending its way from hand to hand for years and years to come, troubling and worrying everybody as to how they might pass it; and I could see that in a few years it might have disturbed the peace of over ten thousand people. And I thought what a vast amount of trouble I might head off by a little self-sacrifice. So I just took a hammer and mashed that quarter so flat it could never be passed again. To this day there has not been another bad coin passed on me.

This lesson is especially applicable to petty discords, gossip, and unpleasant things we hear about others. Let us deny ourselves the foolish satisfaction of voicing them again, but just crush them flat every time they come to us. It will save a great deal of trouble for other people, and this counterfeit intelligence will become less frequently passed on us. And instead of the false testimony concerning man and the universe, we shall be hearing the true evidence of spiritual harmony. Let us ever be weaning ourselves from the senseless clamor of mortal mind, and learning more and more of Life's sweeter meaning and vaster joys.

Recites Buddhist Prayers.

Boston, Mass., June 16, 1899.

Editor Sentinel:—When I first read the chapter on "Prayer" in Science and Health, the reference to the praying machine in Thibet appealed to me strangely.

Several days since I cut from a morning issue of the *Boston Globe,* the following clipping, which will prove interesting, I think, to any reader of the "little book:"—

Phonograph as Prayer Machine.

Who can believe now that Thibet is not up-to-date. A short time ago a Burmese pedler arrived at Lhassa with a phonograph in his pack. The instrument struck wonder and terror to the hearts of his audience when it suddenly declaimed a chapter of a particularly holy book.

Nabi-Sanna, supreme head of the religion, was immediately communicated with, and he saw that this wonderful machine might be of great use to him as an assistant high priest. He promptly bought it, and now it recites Buddhist prayers hundreds of times a day, to the edification of devout worshipers, who consider it the finest prayer machine that has yet been known in Thibet.—*Sketch.*

WILLIAM L. SHOWERS.

Thanks for the Sentinel.

Cossitt Library, Memphis, Tenn., June 14, 1899.

Editor *Christian Science Sentinel,* 95 Falmouth St., Boston, Mass.

Dear Sir:—Your gift of *Christian Science Sentinel* which you have been sending us for some time past is

Digitized by Google

greatly appreciated by the library's patrons, and I have been instructed by the Directors to thank you for it.

We hope that you will continue to send it.

Very respectfully,
CHARLES D. JOHNSTON, Librarian.

Miscellany.

Treat All Alike.

Those members of the Kings County Medical Society who are actively engaged in prosecuting Christian Scientists and other faith healers in Brooklyn may be actuated by the most laudable motives. It would not be fair to say that the regularly anointed M.D.'s are suffering from the competition of the mental therapeutics and seek to drive them from the field by legal persecution. But this much may be said—if faith healers are to be prosecuted every time one of their patients dies the regulars cannot complain if they are subjected to a similar inquisition. And such a thing is very likely to come to pass. If the regularly graduated physicians lost no patients they would of course be perfectly safe in attacking the faith cure people. Yet every one knows that people die under the care of physicians as well as under the ministrations of mental healers. Therefore, if the faith healer is to be haled into court every time he loses a patient the graduated Æsculapian cannot expect to avoid like proceedings. Both must be treated alike. Both must be held accountable for their failures to cure their patients, and we have an idea that when it comes to percentages of death certificates the regulars will not have much to crow over.

Chicago (Ill.) Chronicle.

Couldn't Arouse Her.

A hypnotic experiment, which narrowly escaped having a serious ending, was indulged in by two young people at 177 Oregon Street, Cleveland, O., recently. George McGann, who has recently discovered that he is the possessor of hypnotic power, and Miss Belle Bard were interested in the case. McGann and Miss Bard were talking of hypnotic matters, when McGann averred that he could place others under the influence of the mysterious power.

Miss Bard agreed to allow McGann to make her the subject of an experiment. McGann succeeded in inducing the hypnotic state, but when he attempted to recall his subject to her normal condition his powers failed him. Finally the aid of L. W. DeLawrence, a professional hypnotist, was sought. DeLawrence said, "When I reached the girl she was in a lethargic state, which is very unusual and dangerous, next to death, in fact. After partly rousing her four times I succeeded in getting her eyes open. They had a dull and lifeless stare. I then got further control and awakened her. She had been in a comatose state five hours."

Cincinnati Commercial-Tribune.

Religious Organizations.

In the January number of the *New York Independent,* an interesting summary is given of the religious organizations in this country and their gains or losses for the past year. It seems that there are forty-eight distinct sects, representing a total membership of twenty-seven million. Most of them made gains during the year, the most pronounced being the Christian Scientists, who took a jump from forty thousand to seventy thousand. Well down toward the tail-end of the grand procession are the Spiritualists with a membership of only 45,030, hardly enough to constitute a quorum. They have made no gains whatever in the past twelve months, and can consider themselves in luck that they have apparently held their own. It was once the boast of this organization that it was more than a million strong, but the doubtful character of the inspirational speakers and trance mediums sent out to furnish proofs to an unbelieving world, queered the whole hobgoblin industry and insured the swift and certain disintegration of the army of believers in ghosts.

Song to the Divine Mother.

The *Literary Digest* says that Mr. Edwin Markham prefaces his poem, "Song to the Divine Mother," with the following interesting note:—

This song should be read in the light of the deep and comforting truth that the Divine Feminine as well as the Divine Masculine Principle is in God—that he is the Father-Mother, Two-in-One. It follows from this truth that the dignity of womanhood is grounded in the Divine Nature itself. The fact that the Deity is Man-Woman was known to the ancient poets and sages, and was grafted into the nobler religion of mankind. The idea is implied in the doctrine of the Divine Father, taught by our Lord in the Gospels; and it is declared in the first chapter of Genesis in the words: "God said, Let us make man in our image, after our likeness. . . . So God created man in his own image, in the image of God created he him; male and female created he them."

Christian Science is not a Fad.

Christian Science has been before the American public for more than thirty years so it can hardly be called a fad. It has about four hundred worshiping congregations in this country, and nearly a million believers in America and Europe, and it is rapidly spreading into all parts of the civilized world. Its text-book, Science and Health, has passed through more than one hundred and fifty editions of one thousand copies each. Christian Science makes neighbors better to their neighbors, husbands better husbands, wives better wives. It inculcates honesty, virtue, temperance, and brotherly kindness, and it helps men to be better, healthier, happier. Christian Science rests on reason as well as revelation, and it appeals not to blind credulity, but to open-eyed intelligence.

The Walla Walla (Wash.) Union.

Substantial Sympathy.

Among the responses yesterday to the *World-Herald's* appeal to help the Herman cyclone sufferers was that of the First Church of Christ, Scientist, of Omaha. In addition to many individual gifts from its members, it was decided to devote last Sunday's collection to the relief work, and an announcement was made to that effect at the regular Wednesday evening meeting. The contribution was a most liberal one and the *World-Herald* relief bureau was the recipient early Monday morning of a check for an even one hundred dollars. The church directors expressed confidence that the bureau would attend to its proper distribution or use it where it would do the most good.

Omaha World-Herald.

Wisconsin Tornado Sermons.

Eau Claire, Wis., June 18.—In nine pulpits here to-day the New Richmond tornado was the subject of the sermons. The general sentiment expressed was that it was a mysterious dispensation of Providence, but the Rev. Joseph Moran, of the Episcopal Church, said it was the devilish work of an unknown power, and not the act of God.—*St. Louis Globe Democrat.*

Extraordinary Spread of Christian Science.

Membership in Christian Scientist Churches:—

In 1897 (official)	40,000
In 1898 "	70,000
In 1899 (estimated)	150,000

Questions and Answers.

How may I know that I am properly "a student of the books of Mary Baker G. Eddy"?..If found belonging to that class of students, to whom should I apply for answers to such questions as a student would refer to his teacher?

E. H. B.

We republish the following from the *Sentinel* for March 23.

"What constitutes a student of Science and Health?

J. C. B."

"We suppose, in a general sense, any one is a student of 'Science and Health with Key to the Scriptures,' who is earnestly and conscientiously studying this book for the purpose of ascertaining and applying the truth contained therein. More specifically speaking, we suppose that a student of Science and Health is one who has so understandingly studied and absorbed the teaching thereof, as to be able to apply the same in healing disease and overcoming sin in himself, and to aid others in so doing. When this student accepts Science and Health as divine revelation, and its author as the revelator, and is able to prove such acceptance by doing the works therein commanded, to that extent, we believe, he comes within the definition concerning which the above question is asked."

We presume to say it is a question for the student to decide for himself as to whether he is included in the class referred to.

As to the second question, we feel assured that whenever the honest, conscientious student of our Leader's works is in need of personal assistance, he will find that need supplied in God's own time and way. We can direct him to no person or class of persons. He may feel that he is called upon to "walk by faith, not by sight," by his faith will grow stronger by reason of this, and he will find all questions answered and all needs supplied.

***

If Jesus frequently said to those he healed, "Go, and tell no man," and our Leader usually did likewise when she received patients, why do we give testimonials of physical healing, in our publications and at our Wednesday evening meetings?—Mrs. C. W.

It was Jesus' mission to teach, by works as well as words, that God is the Healer of sickness as well as the Saviour from sin; but he could not devote all his time to healing disease. Perhaps it was because he desired to avoid the multitudes that would throng him if these cases of healing were generally known, that he said, "Go, and tell no man." Although he healed multitudes, and we have no record that he ever turned any one away, he sought to impress the people with the thought that God, and not his personality, was the healer.

He taught the twelve and the seventy, and then sent them out into the world to preach the gospel and heal the sick. Thus by teaching others how to heal the sick and cast out evils, a greater number were reached than would have been if he had devoted all his time to this line of work.

Since her discovery of Christian Science, the Rev. Mary Baker Eddy has taught the Principle which heals and saves. Her effort has been to impart to others the understanding of Truth which makes free indeed. By pursuing the course she has, the greatest possible number have been reached and vastly more has been accomplished in physical and moral healing than if she had devoted all her time to physical healing alone. The giving of testimonials in our publications and at the Wednesday evening meetings, is right in line with the work of Jesus and what our Leader is endeavoring to do; *i.e.*, to show to the world that God is the Healer of sickness and Saviour from sin.

To-day there are hundreds of Christian Science practitioners, and as the experiences are usually given without reference to any personal healer, the effect is to turn the thought of the hearers to God, and show them that all can gain the understanding of Truth which heals sickness and sin.

Expressions of Gratitude.

I MUST not delay to bring my tithe of loving gratitude into the storehouse for all the blessings that divine Love has showered upon us at this Communion season in the Mother Church. Through the kindness of friends it was my great privilege to attend the Communion services. We came, not knowing what was in store for us, but knowing we should be fed bountifully by divine Mind. We came bringing our humble tithes of spiritual growth, of sacrifice of the material sense to the spiritual, and we did indeed find that the windows of Heaven were ready to pour us out such a blessing as we had scarcely made room to receive.

Can we, as we go back to our homes, ever doubt again that God will furnish a table in the wilderness at all times, and that divine Love does meet every human need, no matter what error would have us believe to the contrary?

Our dear Mother has fed and refreshed us in the affluence of Love until we tearfully strive to be made meek partakers of the Truth that is poured forth in such full measure. My love to her who has indeed been Mother to our infant growth in the understanding of Life that is casting out all fear and is bringing in the new creature clothed in the "beauty of holiness," can only find expression through my daily demonstration of the Truth which is the way that leadeth unto Life eternal.

Seeing her we saw something of the selfless love which she embodies and shows us how to reflect, and it brought home very clearly to us that only as we grow in love can we meet with her in divine Mind's abode, far away from all personal sense. My grateful thanks also go out to those who so lovingly ministered to us of their treasures of love and enlightenment during our Communion season, and this reflection of Love will go out to the ends of the world, bringing renewed love, light, and strength.

C. L. M., Chicago, Ill.

Louisville, Ky., June 14, 1899.

Dear Editor:—The *Sentinel* of June 8 has come to the Field so filled with the bright reflection of Love's Communion, that its pages fairly scintillate. Deeply grateful for the bread broken for all, I cannot forbear expressing sincere thanks to you for sending it abroad to hungry hearts; while, to the dear Mother, words cannot convey the uplifted thought, kindled by her Communion Message and address at Tremont Temple. When I first read of her personal presence at the Annual Meeting, a sense of disappointment and self-reproach came to me, that I had not been one of the happy three thousand. But the sense of loss was at once overcome as I remembered I had followed my highest light, and could not lose anything by so doing. And how true it seemed. As I read the Mother's beautiful words, "Where God is we can meet, and where God is we can never part," I felt I could no longer say, "I have never met the Mother." As I sat alone and drank in her inspired words, I seemed to be kneeling with the brethren, and my soul to have entered the Holy of Holies. What though the calendar on the wall said it was too late, the Feast had closed! Truth knows no past. Mother love has opened wide the "Gate Beautiful," that all her earth-worn, trusting children may enter and be refreshed.

Gratefully in Truth,

E. L. MANSON.

Testimonies.

From a New-Churchman.

Editor Sentinel:—The article "Healing the Body through Spiritual Means," by L. M. H., copied from the *New-Church Messenger,* in your issue of May 4, recalls an experience of mine some ten years ago, at which time I was an earnest student of Swedenborg's system of theology. At the instance of a lady friend, I had bought and read a copy of the thirty-first edition of "Science and Health with Key to the Scriptures," by Rev. Mary Baker G. Eddy. Although I did not at that time grasp the Principle taught therein, yet I believed in it, so far as I could comprehend it.

The experience to which I refer was an attempt to heal myself of the mumps, upon the lines laid down by Mrs. Eddy in her book. I was awakened one morning, after having been exposed to the contagion, with a pain in my right jaw, and upon putting my hand to my face found one of the glands considerably swollen. The thought suggested itself, You've got the mumps now, sure. Almost simultaneously with this thought came to mind this passage of Scripture: "All things were made by Him; and without Him was not anything made that was made" (John, 1 : 3). The contrast between the two thoughts caused me mentally to ask myself the question, Did God make the mumps? and immediately the answer came, *No;* He never made anything that was evil or false; so this must be one of those illusions, as I have read in Mrs. Eddy's book. If so, I don't need to have the mumps, for as a child of God I cannot be sick. So I mentally determined that I would not acknowledge the claim, but would deny its reality whenever it suggested itself, which it did quite vigorously at the breakfast-table whenever I put anything sweet or sour into my mouth. After breakfast I had considerable fever, so I went into an adjoining room and lay down, and began mentally to deny the reality of the claim of disease, and affirming the Scripture passage above quoted as the basis of my evidence for so doing. I do not know just how long I lay there, but when I arose it was with a happy feeling, that Truth had overcome, for the fever had abated, the pain had ceased, and by the next morning the swelling had subsided.

This was the first demonstration I had witnessed of purely mental healing, and it led me to see that the system was practical. Later investigation led me to lay aside my Swedenborgian theology entirely, for the simple, practical, and demonstrable Science of God and man, as expounded by Mrs. Eddy in her wonderful book, which I began to apprehend, as the word of God, and not merely a woman's opinions. This filled me with a profound reverence and awe, as I began to realize how far I fell short of reflecting that perfect Mind which was manifested by Christ Jesus, and also showed me the folly of clinging to unspiritual and non-healing systems of religion and medicine.

During all these years in my family of four children, my wife and I have never resorted to aught but the Truth-healing, and we have had some very serious claims to meet at times, but Truth has been our "strong deliverer," and we realize clearly now, that mortal mind is the seat and cause of all disease, and that divine Mind is the efficient and perfect remedy for every ill "flesh is heir to."

The physical healing is a small matter compared with the spiritual cleansing and uplifting that has come to us, as a result of this teaching.

Having been a New-Churchman myself, I can understand some of the difficulties that stand in the way of those who have immersed themselves in this intensely humanized thought of God. If there are among your readers others who, like L. M. H., are desirous that "Spiritual healing should be better understood and more widely practised," by New-Churchmen, I would be pleased to give such the benefits of my experience.

James Erwin, Chattanooga, Tenn.

From England.

Little Lennox Albert was born Wednesday, May 18, 1898, about a quarter to two in the morning. The Scientist who was treating me came about ten o'clock at night and stayed with me; and a nurse, who had given up her nursing under doctors for Christian Science, did all that was necessary. The old fear came upon me at the last, so I cannot say the birth was painless; it was more especially afterwards that the great difference between similar circumstances under *materia medica* was very apparent.

I had a comfortable night, and my husband was glad to find me sitting up in bed without support for breakfast next morning, very cheerful and saying how strong my back felt. I wrote a long letter to a friend at ten o'clock that morning, and heard my oldest boy do his reading as usual. Friday I got up after breakfast and washed and dressed myself without help; Saturday I walked into the nursery; Sunday wrote letters and did the service; Monday came down-stairs; went out in the garden that week and had friends to tea. On Whit Monday. baby and I drove over to South Weald, three miles distant, to a lunch party given by the Scientist before going away. This may not seem a very wonderful demonstration compared to many in the *Journal,* but having had two children in the old thought, the difference was very striking to me. Before and after my other children were born I had suffered very much from constipation, but this was removed by treatment, and I had no trouble after baby was born so long as the Scientist treated me; afterwards self-treatment put me right. Before I knew of Christian Science, whilst nursing my other children, I was put on a most careful diet, and still the children suffered; this time I made no difference in my diet from the first, eating solids, salad, green vegetables, lemonade, currant cake, but it meant work to know that baby could not suffer thereby, and he did not.

I am proving daily that the best thing one can do for children is to bring them up according to the teachings of Christian Science. I am one of the many mothers whom Christian Science is teaching that "God is Love," and that "perfect love casteth out fear." I thank God for Christian Science and for sending the dear Mother to show us that the understanding of God and His laws, as revealed by Christian Science, is the Truth that makes free, and makes us love to serve God.

F. H. B., Brentwood, Essex, Eng.

A Prayer.

BY CAROL NORTON.

Oh, make me childlike, make me glad
As the joyous brooklet never sad.
Oh, let my feet Love's errands run
From early morn till setting sun.

Oh, make me trusting, guileless, pure,
And let my path be straight, and sure.
Then as a little child in heart
Will come to me, Life's better part.

Notices.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JULY 13, 1899. | Vol. 1 No. 46

In Praise of Labor.

MAJOR-GENERAL NELSON A. MILES visited Pittsburg, Pa., June 30, 1899, as the guest of "all organized labor." In the evening he addressed two large audiences in the Grand Opera House and Avenue Theatre. His address at the Opera House was in part as follows:—

From the earliest records and traditions that we have of the existence of mankind upon this earth we find that those people who have been industrious, economical, prudent, and temperate have been prosperous, happy, and strong. Industry gives physical and mental strength to men and awakens all the intellectual energies which have characterized the brain of the intelligent laborer, of the inventor, of the discoverer, and, generally speaking, of the genius so productive, fruitful, and so beneficial to the welfare and happiness of mankind. Wherever indolence and prodigality have appeared as the result of slothfulness or extravagant luxury, there we have found that decay, poverty, and desolation have come to the people and to the nation or race.

Through all the ages up to the present time the purpose of man to earn an honest livelihood, to support himself with the skill of his own hand, or by the genius of his brain, has been most commendable if not always fully rewarded. The condition of him who toils has been constantly improving for many generations. If we go back to the time when labor was forced by tyranny and oppression—and to do so we need not go far beyond our own time—or when labor was often "unrequited toil," as Abraham Lincoln termed it, we find that the condition of man has been constantly improving, and was never more favorable than at the present time.

This has been the result largely of general education and universal intelligence. Labor has been gradually ascending to a higher mesa, to the clear sunlight of reason and progressive thought. It is being more intelligently directed and better utilized; more generally respected, and more highly appreciated. That fancied superiority of those who, by the accident of birth, were fortunate or unfortunate enough to be able to live without labor, has passed away and no longer prevails.

✠

It is the character of the man, his sense of honor, his known integrity, his unswerving honesty, his kindness of heart, his nobility of sentiment, of purpose, that constitutes the true man of the present age. Whatever his situation or circumstances in life may be, or whatever his occupation, so long as his work is honorable and honest, he should ever be respected. With all the intellectual power and clear-brained statesmanship of that great commoner and most uncommon man, Abraham Lincolm, there was no one element of his character that so endeared him to the American people as the consciousness of his unquestioned and infallible honesty.

Possibly in no part of the world have the circumstances been so favorable to the elevation of the great mass of the people as in this country. Among those circumstances is the fact that our forefathers more than one hundred years ago were the men who felled the forests, cleared the fields, established their homes, built their forts, dammed their rivers, improved their harbors, and laid the foundations of their various industries, at the same time erecting their schoolhouses and founding their colleges, establishing their courts of justice, and in time wrought out a form of government more beneficent, more comprehensive, and more liberal and far-reaching for man's benefit than any government or constitution ever before established in the whole history of the world.

It was a government which secured to all men equal rights, and absolute freedom of thought and action, and conceded the inalienable right to life, liberty, and the pursuit of happiness. Since our fathers framed that constitution and established our government, the condition of mankind in this country has improved more in one hundred years than in any one thousand years of previous history, and its influence upon the inhabitants of other countries has been written in the progressive advancement of a whole line of republics, extending from our northern boundary to the extreme southern cape. Not only that, but its influence has been plainly felt in the more liberal customs and laws which we see in vogue and coming into vogue in other governments of the earth.

✠

There never has been any great measure adopted that did not have, either in its construction or establishment, some adverse element, some defect; and never a great human achievement without some trials, possibly some storms and disasters; and all evolutions beneficial to humankind make progress not without occasional retrocessions and embarrassments; but the tendency of every just cause and honest purpose is onward and upward, and in the end right and justice must prevail.

You have reason to rejoice in this celebration that your cause has made so much progress by peaceful, wise, and judicious organization and intelligent thought directed for the benefit of all. Truth and justice can never suffer through open and candid discussion. It is only the cause of wrong that can be advanced by the suppression of truth. Tyranny and oppression have always flourished where igno-

Digitized by Google

rance among the masses has prevailed, and where the dictum of authority has been accepted without examination and verification through candid discussion. By this I would not be understood as counseling disrespect of authority, for constituted authority is presumed to speak, in this country especially, the wishes of the people; but the wishes of the people are, or should be, expressed in law, and that expression cannot be wisely given without full interchange of views and in the forms provided.

Here let me repeat what I stated years ago, that, "so far as I am concerned, I believe I can sincerely say that my sympathies have been, from boyhood to the present time, with the man who labors in any honest and honorable occupation."

It is possible that sometimes our advantages and institutions may not be fully appreciated. If there is any body of people in the United States that ought to constitute the strongest patriots, it is that body of men who toil and seek honest occupation for the benefit of themselves and their families. They ought to cherish the institutions of this country, as they undoubtedly do, with the most earnest and devoted patriotism, for if the temple builded by the fathers and maintained by the children, sustained and loved by you of the present day, is once thrown down and destroyed, the condition of the American citizen will be thrown back to that of the slave or the serf of a century ago. Should this republic be destroyed, either through elements of power from without or corruption and iniquity within, a cruel despotism will follow.

One eminent in your councils several years ago expressed a wise and humane thought in the following sentences: "We insist upon the right to organize, the right to think, to act; to protect ourselves, our homes, and our liberties, and work out our emancipation. We are confident we shall secure them, and that the world will stand surprised that they were accomplished through the means of an enlightened public opinion and by peaceful means."

While the republic has in one hundred years vastly outgrown the proportions and conditions anticipated by its founders, the principles of government, the responsibilities of citizenship and statesmanship remain the same. While there are new and complicated problems without, that must be settled on principles of justice and humanity, there are still mighty interests and responsibilities within affecting you, your children and children's children, requiring the most earnest and unselfish wisdom and patriotism on the part of all its citizens.

I congratulate you on the progress you have made. I congratulate you on this joyous celebration, which you have every reason to enjoy with pride and pleasure. I congratulate you on your bright prospects for the future. So instruct your children that they shall appreciate the true principles of our government; that they shall seek an honest and honorable occupation, and above all, that they shall take an intelligent part in the discussions of the economic questions, a deep interest in all the political phases that affect the welfare of the municipality, state, or nation, and that it lies with them to shape for themselves their future welfare and happiness.

Teach them to be true to themselves in maintaining the purity and integrity of that mystic power, the sovereignty of citizenship, and to exercise it as a sacred trust and invaluable privilege for the welfare of themselves and their descendants. Adjure them to promote patriotism in the broadest and highest sense and maintain the institutions of the great republic, that it may in truth be the citadel, the home, and the safeguard of a free, enlightened, prosperous people through all the coming ages.

Items of Interest.

The Fourth was celebrated in the usual noisy and patriotic manner throughout the United States, in the colonies, and in many foreign countries.

At Boston the oration to the city government was delivered by ex-Mayor Matthews in Tremont Temple, to a large and appreciative audience. In many parts of the city and suburbs were to be found amusements and entertainments as varied as the inclinations of the masses who desired to participate.

At Philadelphia the bell in the tower of the Old Independence Hall was struck one hundred and twenty-three times, one for each year of the nation's life.

At Manila all nationalities participated. The foreign ships and consulates, including the Spanish, raised their colors in conjunction with the stars and stripes. Several hundred boys and girls—Filipinos, Spaniards, and Chinese—each carrying an American flag, sang "America" in a curious mixture of dialects.

At London, Ambassador and Mrs. Choate held elaborate receptions at the United States embassy. A reception was also held at the United States embassy at Paris.

The following letter accompanied the silver loving-cup presented to the French Ambassador, M. Cambon.

The Department of State, June 29, 1899.

Excellency:—The President directs me to request your acceptance of this cup, which he has caused to be made, in token of the services you so kindly rendered us in the negotiations of the protocol of August 12, 1898, which led to the treaty of peace between the United States and Spain.

I am further requested by the President to convey to you, Mr. Ambassador, the assurance of his sincere regard and esteem.

I remain, with sentiments of the highest consideration, your excellency's most obedient servant,

JOHN HAY.

Professor J. S. Schurman of the United States advisory commission of the Philippines, has returned to Manila from a three weeks' tour of the southern islands. He says the masses are awaiting the settlement of the war in the island of Luzon before declaring themselves. He was received in a friendly manner wherever he went, and in several of the principal towns he was tendered banquets. Mr. Schurman thinks that when Aguinaldo is defeated the allegiance of the southern islands can be secured by diplomacy.

Benjamin Trueblood, Ph.D., secretary of the American Peace Society, has just returned to Boston from The Hague, where he has been since the beginning of the Peace Conference. He was the only American besides the American delegation who was present at the Conference. Dr. Trueblood says the Peace Conference was a great success. The delegates themselves think they have accomplished all that could reasonably have been expected.

The annual convention of the National League of Commercial Travelers of the United States opened at Albany, N. Y., June 30. President Dowe, in his annual address, declared that thirty-five thousand commercial travelers had been thrown out of work through trusts, and twenty thousand more had had their salaries reduced. One in every ten was affected. Resolutions were adopted condemning the organization of trusts.

A new statue of Webster has been unveiled at Washington, D. C. It is heroic in size, measuring twelve feet in height, and stands on a pedestal of granite eighteen feet high. The statue represents Webster at about fifty years

Digitized by Google

of age, when he was at the height of his fame. It represents his familiar pose when addressing an audience. The statue will be formally dedicated some time after the assembling of Congress.

The directors of the Boston and Albany railroad have recommended that the road be leased to the New York Central for 999 years. The consideration for the lease is the payment of eight per cent per annum, payable quarterly, on the capital stock of the road, which is twenty-five million dollars. The New York Central has also made an offer for the Fitchburg road, but the offer was refused.

Secretary Long will present to Admiral Dewey the splendid sword voted him by Congress. The presentation will take place on the east front of the Capitol, where the Presidents are inaugurated, on the day the Admiral arrives at Washington. President McKinley, members of the cabinet, Rear Admiral Sampson, General Miles, and other prominent people will be present.

The governor of Texas has telegraphed to Washington asking the assistance of the War Department on account of the recent floods in the state. It is estimated that twenty-five thousand square miles are under water. A large number of lives have been lost, and those who remain are enduring great suffering. All the assistance possible will be rendered at once.

The Society of California Pioneers of New England, recently passed a resolution endorsing the recommendation of Admiral Dewey that Congress pass a law granting citizenship to the sixty Chinese who fought under our flag in the battle of Manila. Admiral Dewey said, "They were good enough to fight for us, and they are good enough to be American citizens."

The United States Treasurer's report for the month of June shows that the total receipts for the month were $47,126,915, and expenditures $31,382,762.

The Treasury deficit for the fiscal year ending June 30, is $88,875,989. The cash balance at the beginning of the new year is $218,380,468.

Captain Dreyfus arrived at Rennes, France, at 6 A.M., July 1. Owing to the precautions taken, the prisoner and his escort reached the prison without being disturbed. Immediately after his arrival Mme. Dreyfus was granted permission to see her husband, and will be allowed to do so daily.

Judge Walter S. Cox, justice of the Supreme Court of the District of Columbia, has tendered his resignation to the President. Justice Cox has been on the bench for more than twenty years. He presided at the trial of Guiteau, the assassin of President Garfield.

The Edward W. Kinsley Post 113, G. A. R., presented a handsome sword to Major-General Joseph Wheeler. General Wheeler sent a grateful acknowledgment of the gift, in which he said the magnificent sword would be a "lasting memento of Memorial Day, 1899."

The American delegates at The Hague have succeeded in obtaining from the Peace Conference a unanimous vote in favor of having the question of private property at sea in time of war, dealt with at a special conference to be summoned hereafter.

In the race between the Columbia and the Defender for the New York Yacht Club cup, the former won by the narrow margin of three minutes and thirty-three seconds. The race was sailed over a triangle off the Sandy Hook lightship.

Captain N. M. Dyer of the Baltimore, who had just returned from Manila and from Admiral Dewey's squadron, was given a rousing reception by one thousand people when he reached his home at Melrose, Mass., July 4.

According to the statement of the adjutant-general of the army, about thirty-five hundred troops are on their way to Manila, and four thousand are at San Francisco ready to start as soon as transportation can be provided.

Judge Henry Clay Caldwell, presiding judge of the United States Circuit of Appeals, eighth district, indorses the new Colorado law which allows the agreement of nine jurymen to constitute a verdict in civil cases.

The first order for recruiting troops under the clause authorizing the enlistment of thirty-five thousand men was issued June 30. The order is to enlist men for the three skeleton regiments in the Philippines.

Rev. Anna Howard Shaw, one of the American delegates to the International Congress of Women, preached to a large congregation in the Westminster Congregational Chapel, London, July 2.

Mrs. May Wright Sewall, president of the United States Council of the Women's International Congress, has been elected to succeed the Countess of Aberdeen as president of the Congress.

Information is received from Madrid that Spain has decided to reduce the budget estimate of the strength of her army from one hundred and seven thousand to eighty thousand.

The National Social and Political Association, assembled at Buffalo, N. Y., passed a resolution denouncing the war as "an affront to every sentiment of humanity."

The eighteenth International Christian Endeavor Convention assembled at Detroit, Mich., July 5. Eleven thousand delegates attended the opening session.

Albert, Prince of Monaco, has invited Dreyfus to come to his autumn residence in France as "soon as the holy work of justice has been accomplished."

The information is received from Washington that there are about sixteen thousand claims on file in the pension office growing out of the Spanish war.

According to the report of Secretary Baer, there are now 55,813 Christian Endeavor societies, having a membership of three and a half millions.

The disarmament proposal was definitely settled at the Peace Conference by being remanded to the consideration of the respective governments.

Brigadier-General Joseph Wheeler has been ordered to report to General Otis at Manila for service in the Philippines.

The gold reserve in the United States treasury shows a gain of sixteen million dollars in about six weeks.

The cost of transport service on the Pacific coast since the war began, amounts to $5,930,218.

The organization of a union of fifty thousand workmen in Greater New York has been begun.

Last year's product of the Pennsylvania silk industry was valued at $32,334,620.

Christian Science Sentinel

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. — CAMILLA HANNA, C.S.D. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

The Washington News Letter.

Dear Editor:—Having received a letter from Captain John F. Linscott, C.S.D., of Washington, D. C., in or about May, 1898—informing me that Colonel Sabin of that city, editor of the *Washington News Letter,* had become a Christian Scientist, and by reason thereof had lost the principal patronage of his newspaper,—I immediately requested all Christian Scientists to subscribe for said newspaper one year. In a letter Colonel Sabin pleasantly assured me that their generous subscription had resulted in the present prosperity of his paper. I had never heard of Colonel Sabin up to the above-named date, and have never had the pleasure of meeting him.

In answer to the questions from the Field: "Are Christian Scientists under obligations to continue their subscriptions for the *Washington News Letter?*"—they are under no further obligations to me.

MARY BAKER EDDY.

July 10, 1899.

The Present Need.

MORE Christian Scientists are not so much needed at present as better ones. There is danger of forgetting that progressively higher demonstration is the only way to help establish true Christianity.

It is comparatively easy to win converts to almost anything, but the numerical strength of its adherents is no proof of the truth of a doctrine. If numbers could prove anything, the Mahometans might properly challenge Christians to a comparison of evidence.

Christian Science is pre-eminently Science. It rests upon demonstration and nothing else can sustain its infinite claims. It makes the bold declaration that all the accumulated lore of *materia medica* is worthless compared with the healing power of divine Love, as taught by Jesus, and that God is able to do all things. More than a million cases of healing constitute the evidence that Christian Science does heal the sick, and this evidence is rapidly accumulating. As the workers draw closer to God and deny self, the healing will be done as promptly as it was by the Master, and this is the right way to make converts.

The present need is for men and women who are above all puny ambition to extend their personal influence, and who cannot be lulled to sleep by the praises of the foolish; for men and women who will not set limits for themselves in doing good; for men and women who are capable of a broad view of the work to be done and who have a determined willingness to do it.

In Christian Science the warfare against evil is not like that of the world, where army fights army almost automatically. Ours is a hand-to-hand conflict, and each soldier must be a David, able to stand alone and fight.

When we look at the wickedness of the world it seems so impossible to redeem it that we are tempted to be discouraged. We need not worry about saving the world—the way to redeem it is to redeem ourselves. So much goodness and purity as we have will exert a wonderful transforming power on the world.

Distributing the Pamphlets.

Editor of Sentinel:—The following is a systematic plan for reaching the interested public with such of our literature as will remove prejudice, inform the ignorant, and feed the hungry with the Word of Good. By this plan, in obedience to the Mother's desire, there may be given a wide circulation to that very important booklet, "Christian Science History."

Christ Jesus said, "The children of this world are in their generation wiser than the children of light."

When the children of this world undertake to carry their cause to success in an election, they look after each individual voter. Is not the cause of God as worthy as the cause of any party?

The starting-point of this plan is an efficient central committee, who have general charge of the work. Their first duty is to put in the hands of local Scientists slips of paper on which they are to write the names and addresses of non-Scientists to whom they agree personally to give or send such literature as is given them by the central committee. These lists are all returned to the committee who carefully look them over to avoid duplicates, and make a copy of the names for future use. The intention is to get the "Christian Science History" into the hands of all those who have been helped in Science, those who have read Science and Health, those who have ever attended a service, those who have come for inquiry, and to all the thoughtful and open-minded citizens.

The complete list of names may be made up from the patients of the practitioners, from the friends of the committee and church members, and from a careful study of the city directory.

On the arrival of the literature, the committee at once sets aside the supply for each individual who has made out his slip of names, and that there may be no misunderstanding, the names he had listed are put with his literature.

To the remainder, the Histories are mailed enclosing with each copy, as far as possible, the card of some member of the committee known to the recipient, thus making the present the gift of a friend to a friend.

The same plan somewhat modified is applicable in case of a lecture or other event to which the general public is invited.

This plan is in harmony with the general method and spirit of our Cause. The fruit that is to be gathered in Christian Science must be hand-picked. The heavenly voice which wins the multitude is not thunder, but it must come to each as the voice of God. The wandering sheep are to be herded not in droves, but gently guided one by one into the true fold.

The signs of the times are auspicious. Hostility is giving place to inquiry. In reference to Christian Science the public, which was once an exclamation point, has now become an interrogation mark, and is ready and willing to be transformed into the peaceful period. Our literature, especially the works of our Leader, if widely circulated, will hasten the joyous advent of this peaceful period.

IRVING C. TOMLINSON, Concord, N. H.

An Interesting Editorial.

FROM the *Pittsburg Dispatch*, a leading daily newspaper of that city, we republish the following interesting and candid editorial comment:—

The growth of the number of professors of Christian Science, with the spread of the peculiar doctrines known by that name, is just now attracting a great deal of attention alike in this country and abroad. It is well known that there has been much opposition to the new teachings, both among the ministers of some of the churches and generally among the medical fraternity; but the fact is pointed to, none the less, that the cult is spreading rapidly. It is claimed that Christian Science, as it is now known, was only formulated within the past quarter of a century, and hardly taught until about ten or fifteen years ago. The Scientists claim a professed following to-day of over a million people in the United States. They have a flourishing congregation in Pittsburg. A good deal of local interest attaches to the announcement of a free public lecture, to be delivered at the Carnegie Hall here to-morrow evening, by Mr. Carol Norton, on "Christian Science: its Religion, Therapeutics, and Philosophy." Mr. Norton is a member of the Board of Lectureship of the Mother Church of Christian Science, Boston, and the local believers expect his discourse will correct what they claim to be popular misconceptions of the subject.

With a view to explaining some of the principles of the Science and meeting a few of the more radical objections, one of the most earnest and intelligent Christian Scientists of Pittsburg yesterday prepared the following brief statement for a Dispatch reporter, setting forth a few of the points upon which it was conceived the public will gradually become better informed.

"Not long ago the very name of Christian Science was unknown here, and whoever affirmed his faith in its doctrines must of necessity cite some marvelous cure as a proof of its efficacy. Now from many quarters come reports of the healing of diseases alleged to have been hopeless, and almost every one numbers among his acquaintances a Christian Scientist who will gladly testify to its power. It is claimed by the Christian Scientists that no subject before the public has been so grossly misrepresented. Agassiz once said, 'Every great scientific truth goes through three stages. First, people say it conflicts with the Bible; next, they say it has been discovered before; lastly, they say they have always believed it.' Present appearances indicate that Christian Science is entering upon the last stage, though there are still many people who, because of their appalling ignorance of its teachings, believe that it conflicts with the Bible. If those who are under this impression will only read the text-book, Science and Health, by Mary Baker Eddy, and then 'search the Scriptures,' they will find that it is nothing but pure Christianity.

"Some one has designated Christian Science as 'Science with Christ left out.' Can there be any Science with Christ left out? If Jesus was the Christ he must have had all knowledge. If a knowledge of material science were necessary in order to attain perfection, would he not have left some rule concerning it for our guidance? Did Jesus ever counsel obedience to the laws of matter? No; he performed all his wonderful works on the basis of spirit, walking on the water, turning water into wine, healing the sick, and raising the dead in direct opposition to the so-called laws of matter; and because these things were incomprehensible to the material minds of the people of that day they were called miracles. So we have always believed they were exhibitions of a supernatural power given for a short time; but we have absolutely no authority for this belief. Jesus promised that his followers should do 'greater works than these,' and he made the 'fruits' a test of discipleship.

"He overcame all material laws by the demonstration of the great law of Spirit, and Christians to-day may avail themselves of this same law with the same results. Indeed, have they any right to call themselves Christians if the 'signs following,' which Christ himself demanded, are lacking?

"The great stumbling block to those who know little of Christian Science is the statement that there is no matter, and it is natural that this should seem absurd, when we remember that we have received all our education in the school of matter. (Read what St. Paul says of 'the natural man' in 1 Corinthians, 2 : 14). What would be thought of a man who, never having heard of chemistry, should take up a text-book and expect to find what he read intelligible? Or would one who was barely able to add two and two quarrel with the principle of numbers because he could not understand a problem in higher mathematics? What evidence is there before the material senses that the earth revolves around the sun? Yet science tells us that this is true, and we believe it. So material sense would have us believe that there is life in matter, and we do until Science shows us the falsity of this belief.

"To prove this statement take the following example. It is suggested to a hypnotic subject that his hand is badly burned and he apparently suffers actual agony. Where is this pain? Is it in matter? His hand has not been touched, so the sensation must be in mind. Now, it is perfectly patent that the mind that can cause or feel pain is not the mind of God. 'Let no man say when he is tempted, I am tempted of God: for God cannot be tempted with evil, neither tempteth he any man.'

"Then what is this mind? Christian Science teaches that it is a false consciousness or belief of mind apart from God, when, in reality, no such thing can exist. God is Spirit, Mind, and is omnipotent. If the mind which is God is all powerful, is there any room for its opposite, evil? There is no real power in this material mind—it has only the power we ascribe to it. Jesus denied the existence of any power outside of God, realizing that he had no mind apart from God. 'Neither pray I for these alone, but for them also which shall believe in me through their word. . . . And the glory which thou gavest me I have given them; that they may be one, even as we are one.'

"Christian Scientists are not alone in claiming that Mind is all. Professor Borden P. Bowne, in his recently revised work on metaphysics, after stating the proposition that in this world there is nothing but Mind, says, 'A thought world is the only knowable world; and a thought world is the only real world.' Why do people oppose a religion that teaches nothing but good? Are the existing religions of to-day as satisfying and comforting? Have we not all prayed with Matthew Arnold,—

> Calm soul of all things, make it mine
> To feel amid the city's jar,
> That there abides a peace of Thine
> Man did not make and cannot mar.

"To give to tired humanity the assurance of God's everpresence and the realization of the peace which passeth all understanding is the aim of Christian Science, and such should be the aim of all true Christians."

Pills and Prayers.

MRS. CLARENCE FOWLER has been held to await the action of the Grand Jury for having, in the opinion of a coroner's jury, caused the death of Charlotte M. Barguet, the wife of Liston W. Barguet—the latter being also held as an accessory to the offense.

Mrs. Fowler is a Christian Scientist, and she endeavored to cure Mrs. Barguet of dropsy by prayer. It is not claimed that her fellow-believers who prayed for and with Mrs. Barguet did anything against her wishes. Mrs. Barguet herself did not believe in regular doctors. She had no faith in pills. She had great faith in prayer. She was sixty years of age, and of sound mind—unless it is

Digitized by Google

to be assumed that any one who believes in prayer and disbelieves in pills is insane.

At sixty years of age men and women, unless insane, are presumed to be able, and to have the right to decide for themselves what they shall eat and drink, and how they shall live, including what kind of medicine they will or will not take—or whether they will take any or none.

But Coroner Banning is of a contrary opinion. He holds that, since Mrs. Barguet might have been cured of dropsy, or at least have had her life prolonged by the aid of a regular physician and regular pills, she had no right to trust to an irregular physician and irregular prayers. She, of course, being dead, cannot be prosecuted for attempting suicide by prayer, as she logically would and should have been if she had survived. But Mrs. Fowler and her associate faith-curers, who substituted the unavailing prayers for the possibly efficacious pills, can, and Coroner Banning believes they should, be punished for manslaughter.

Resembling the Barguet case in many points, yet differing from it in others, is the case of the child, Lizzie Kranz, who was found suffering from gangrene, and taking another style of "faith cure" from Mrs. Louise Muller.

Mrs. Muller's treatment consisted in reciting incantations from a book of magic, called "Egyptian Secrets; or, White and Black Art for Man and Beast." All that little Lizzie had to do was to believe in the curative power of the book. As a result, she is now in the Eastern District Hospital, and her left leg having been amputated, she will probably recover under regular surgical treatment.

The essential points of difference in these two cases are:

First, that the woman said to have been killed by prayer was an adult, while the girl who has lost her foot by the incantation treatment is only a child. And, while an adult person may try healing experiments on his own life, his right to imperil the life of his child in that way is a far different proposition.

Second, Mrs. Dr. Fowler used prayer and taught faith in prayer—prayer, that is, in the Christian sense of the term, which recognizes God as the hearer and answerer of earnest, devout prayers. Mrs. Muller used magical incantations, which is quite another and purely pagan affair. And that is a very important distinction.

The relative utility of pills and prayers opens up a large question. To say that prayers have no effective value in the treatment of sickness is to charge the whole American nation with lunacy; for did we not appoint a day of national prayer for Garfield, when he lay dying, and assemble in our churches to ask God to spare his life? Did not the English nation do the same thing when the Prince of Wales was ill? And if his recovery was wholly a matter of regular doctors and pills, why did they mock the Almighty with meaningless and purposeless prayers? Unless we are to repudiate the whole Christian practice of prayer it will not do to say that pills are everything and prayers nothing. There must be a proper ratio between pills and prayers, a reasonable blending of doctors, drugs, and devotion—or else, why not shut up the churches and depend wholly on the hospitals?

The trial of Mrs. Fowler for hastening Mrs. Barguet to death by prayers will give an airing to this very interesting question, and may help us to a clearer appraisement of the relative value of pills and prayers.—*New York World.*

Persecuting a Cult.

PHILADELPHIA physicians, with a spirit worthy of the Roman persecutors during the early Christian era, have decided to commence a national war against the Christian Scientists. It is said that these medical folk are now collecting information from different parts of the United States concerning the practices of Christian Scientists as healers, and when sufficient evidence is obtained, it will be laid before the attorney-general of the United States as an evidence of the necessity of calling the attention of Congress to the alleged abuses of these healers, and securing the passage of a bill that will have the tendency to stop the practice by imposing a heavy fine for its violation.

It would seem to the person who has followed the rapid growth of the new belief that the Philadelphia physicians will have a very large contract on their hands, in this proposed attempt to put down a cult through an appeal to Congress. All over the country the faith cure has earnest and influential followers. Those who believe that they have been helped by the Christian Scientists are ready to stand by the leaders of the new movement, and to give it moral and financial support.

The opponents of Christian Scientists attempt to enforce their arguments by announcing isolated cases in which certain persons, who submitted to the faith curists, have died. To the Philadelphia physicians who hope to crush out this new belief, one might suggest that the Christian Scientists have the undoubted right to collect evidence against the medical profession, on account of failures to cure in certain cases. A surgeon will operate on a patient in the hope of effecting temporary relief, even if he knows that the operation will finally result in the death of the patient. The operation is generally pronounced "successful," and the public is satisfied. In the case of the Christian Scientists, who allege they can effect cures through the mind acting unconsciously upon the body, they are generally condemned when some person dies upon their hands.

The physicians, in dealing with their patients, act through reason. Their knowledge of the human anatomy and of the effect of medicines, as a rule, is sufficient to alleviate pain and to save the lives of patients. But if the curists allege that the mind is a medicine chest and, when properly administered by faith, is a cure for all ailments, the doctors have no right to say that the cult is entirely wrong and dangerous. In various states of the Union the principal opponents of the new religion are medical societies. In Georgia the faith curists are treated with scant courtesy. There are three boards of medical examiners, one for each of the recognized systems of medicine, the eclectic, allopathic, and homœopathic, and it is a criminal offence for any one to practise the healing art without a license from one of these boards. If this isn't a medicine trust, what is it? West Virginia, Montana, Tennessee, and Kentucky have laws which oppose the practice of curing by faith.

Without doubt there are members of the new cult who place too much reliance on their belief. But viewing the matter from a practical standpoint, it would seem that the followers of the new cult have as much right to believe that a man can be healed by faith as physicians have to believe that they can effect a cure by administering certain drugs and nostrums. In one case the practitioner experiments with the mind, and in the other, the body feels the effects of medicines.

The Daily Press-Knickerbocker and *Albany Morning Express.*

Medical, Legal, and Religious Aspects of Christian Science.

To the Editor of the Troy Record:—I am asked, as a Christian Scientist, to give my views of the general medical and legal questions brought to the attention of the public by what is known as the Mount Vernon case—the recent death of a Mrs. Barguet of that city, while under Christian Science treatment. By way of preface I desire to say that I am not acquainted with the details of the case proper. I do not know how long the patient was sick,

Digitized by Google

what her general chances of recovery were, or at what stage of the development of her trouble the Christian Science treatment began. Therefore I shall leave those who know directly of the details of the case to speak of these points. The bare facts of the case stand as follows: An intelligent woman, surrounded by an intelligent family, the majority of whom believe in its religion and healing, desired Christian Science mind-healing rather than that of either allopathy or homœopathy. According to the medical opinions advanced since her death, she was suffering from a recognized disease called dropsy. In spite of the treatment, the case ended fatally. These are the plain facts of the case. The legal, medical, and religious conclusions to be drawn from these facts can be briefly put as follows:—

THERAPEUTICAL ASPECTS.

First. The practitioner who attended Mrs. Barguet, and who did her best to heal the case, represents a school of therapeutical practitioners which has at the present time in the United States and Canada alone a following of upwards of two million intelligent and thinking people. This school of healing has established itself through rational common-sense results, and not by or through superstition, fanaticism, or unprovable claims.

Second. Among the practitioners of Christian Science mind-healing are to be found ex-allopathic physicians, some of whom have practised over forty years; ex-homœopathic physicians who have practised upwards of twenty years; hundreds of ex-trained nurses and medical students who have adopted the healing methods of Christian Science because through them they have obtained results beyond the possibility of either allopathy or homœopathy.

Third. Homœopathy, during its early history and establishment, was as bitterly opposed by allopathy as Christian Science is now antagonized and persecuted by the combined forces of allopathy and homœopathy. Hence we are not unduly disturbed or frightened if the old schools of established medical practice seek to perpetuate medical monopoly through persecution in the guise of prosecution, or through the extension of legislative action, which is nothing more or less than an effort to create a Medical Trust.

Fourth. The newspapers of New York City daily publish a list of death notices. Of this list undoubtedly eighty per cent of the cases represent instances of medical failure. In common justice, why should these so-called regular failures escape newspaper publication while the occasional so-called irregular failures of Christian Science, which is healing thousands upon thousands of authentic cases already given up by the doctors, is made the occasion of undue publicity, satire, and cries of "danger to the public health"?

Fifth. The rights of a particular school of therapeutics are based first, last, and always upon the actual results obtained by this school in the healing of disease. I know of a case of consumption of the lungs healed by Christian Science after everything else failed, and am ready to give the confirmation of an allopathic physician in relation to this case. Another case of cancer healed by Christian Science after everything else had failed, confirmed by a physician of fifteen years' practice. Another instance of softening of the brain and cancer healed in a few weeks by Christian Science, confirmed by a physician of fifteen years' practice. Another case of valvular disease of the heart of twenty years' standing healed by Christian Science and confirmed by a physician of nine years' experience. The names of the principals in these instances, as well as those of the regular graduated physicians, will gladly be furnished any honest sceptic. These definite and visible cures multiplied in thousands of cases account for the present spread of Christian Science and its steady march toward religious, legal, and medical recognition. An isolated failure proves nothing. A system should be judged by its definite results and the actual outcome of the application of its principle in the majority of cases, not by the occasional failures which, taken as the symptoms of any system, would lead to immediate rejection and condemnation.

LEGAL ASPECTS.

First. The legal aspects of the Mount Vernon case appeal to me as follows: Christian Scientists give no drugs. Therefore they do not practise medicine. Christian Scientists do not operate through prayer cure, faith, or mind cure. Their method of healing has nothing in common with hypnotism, animal magnetism, auto-suggestion, suggestive therapeutics, or incantation. The strongholds of Christian Science in America are the centers of intelligence and knowledge. In the ranks of Christian Scientists are to be found physicians, clergymen, judges, authors, teachers, successful business men, reformers, musicians, and thousands upon thousands of the intelligent masses. Christian Scientists are not a class of people who appropriate unto themselves the claims of infallibility, neither are they followers of fads and passing fanatical theories of this age of eclecticism. The majority of them have been healed by Christian Science of organic diseases after the best medical skill of the century had failed. They therefore have practical reason for their faith.

Second. The healing of disease without drugs or material means is a part of the Christian religion as established by Jesus Christ. The divine basis of the entire Christian ministry rests upon the command of Christ, "preach the Gospel." The divine basis of the healing system of Christian Science is the correlated command of Christ, "Heal the sick." Christian Scientists affirm that if they imitate Christ's method of preaching the Gospel they should also imitate his method of healing the sick. Thus the legal aspects of this method of treatment are brought at once into direct contact with the religious privileges, duties, and essentials of the Christian religion, and our subject becomes a religious question as well as a legal one.

Third. The attitude of leading legal authorities upon this question can be clearly seen by the following utterances of recent date:—

Judge J. E. McKeighan, of St. Louis, Mo., says, after quoting certain articles of amendments of the Constitution, "The healing of physical disease as well as the salvation from sin in Christian Science is founded on the distinct and definite religious basis arising from the true relation as taught in the Bible and Science and Health, the text-book of Christian Science, by Mrs. Eddy, between God and man. It is the application of this principle which, according to Christian Science, rescues the sinner from sin and heals the physically sick. And I therefore maintain that any law, federal or state, which would undertake to punish Christian Scientists for healing the physically sick by the application and use of their religious principles would be unconstitutional and in violation of the foregoing provisions of the federal and similar provisions of the different state constitutions."

Judge Joseph R. Clarkson, of Omaha, Neb., writes, "The system of Christian Science healing proves itself an institution of God. Through its adherents, healings are accomplished, sinners are saved, suffering of every sort alleviated, and death in many instances successfully defied. With such facts knocking at the door of human understanding would it be legal from any point of view for mankind to say to mankind you shall not turn to God for aid? Knives, scalpels, saws, poisons, plants, animals, minerals, experiments, conflicting human opinions, irreconcilable human theories, remedies all right to-day all wrong to-morrow, everything but God must be your choice? No. Christianity without healing is not the Christianity Jesus taught, practised, and bequeathed to mankind."

Digitized by Google

Colonel Watres, attorney-at-law and ex-Lieutenant Governor of the State of Pennsylvania, writes, "One has a perfect right to employ an allopath, homœopath, eclectropath, or any other kind of a doctor, and they have a right to employ no doctor if they see fit, but rely upon divine power, and this without fear of molestation. The Truth will maintain itself, and the harder it is pressed the more it will be demonstrated."

Governor Thomas, of Colorado, in vetoing an obnoxious medical bill which aimed at the suppression of Christian Science mind-healing in that state, writes under date of April 25, 1899, "The fundamental vice of the bill is that it denies absolutely to the individual the right to select his own physician. This is a right of conscience and is that which enables the citizen to worship God as he may desire."

Professor William James, of Harvard University, says, "The state is not a medical body, has no right to a medical opinion, and should not dare to take side in a medical controversy."

Fourth. The rights of individual privilege, the constitutional rights of every citizen, and the privileges of religious liberty all grant to the sick and suffering such healing methods as they individually desire.

Fifth. The recent medical bill which has become a law in the State of Illinois, gives the Christian Science practitioners of that great state definite legal status as follows: "Provided that nothing in this section shall be construed to apply to any person who ministers to or treats the sick and suffering by mental or spiritual means without the use of any drug or material remedy."

RELIGIOUS ASPECTS.

First. The power of God, alias divine Mind, is as great over the body as over the soul, according to the teachings of Mary Baker Eddy, the Discoverer and Founder of Christian Science. Therefore, mental therapeutics is a vital part of the Christian Science faith. Christianity originally meant health to the body and salvation to the soul. It is again meaning this to the Christian religionists of this century, and nothing can prevent its general acceptance. Men want it, humanity needs it, Love gives it.

Second. All that is herein stated is voiced in the spirit of deference and kindness to the representatives of law, medicine, and religion who hold contrary views. The spirit of honest criticism is abroad. Christian Scientists can afford to be tolerant with opposition and kind with persecution because their positive results greatly exceed even the effects proceeding from the abuse of their tenets by minds of fanatical tendency and unbalanced procedure. In the skilled hands of the well established Christian Science practitioners mental therapeutics is an agency which stands as the best friend of the public health, and will in the days to come reunite the regenerative work of Christianity with the power for healing practised by Christ as recorded in the New Testament. These views are set candidly before a thinking public, prone to justice and impatient with injustice and unthinking condemnation.

Very sincerely yours,

CAROL NORTON, C.S.D.
The Troy Record.

Christian Healers are not Persecutors.

THAT those who object to the drug system of medical treatment do not persecute those who favor that system of treatment is a *well known fact.* They do not ask legislatures to enact special laws to protect them in their practice. They do not object to any law that is enacted or proposed to protect one believer in the drug system from any other believer or advocate of that system. In fact, they all believe (so far as I am informed) that stringent laws ought to be enacted to protect those who believe in the intelligent power and efficacy of the drugs used in that system from injuring each other by their use. Christian Scientists, and all others who object to the use of drugs in the treatment of disease, simply ask the privilege of being permitted to use their own judgment regarding what treatment they shall employ when they find they have need of help to overcome sin or sickness. They only ask that they may enjoy the same freedom in selecting a doctor to assist them to overcome physical infirmities that the state permits them to have in selecting ministers to assist them in overcoming the influences of sin, and in gaining a better understanding of God's will regarding man. Now, in the name of all that is reasonable and right, tell me, is there anything unjust or unreasonable in this demand? Understand, they do not even attempt in any way to force their system upon people—they only ask that intelligent men and women read the Bible and their text-book—forsake idolatry and sinful ways, love God and man, and so govern their bodies that they will reflect Christ, Truth. They believe that Jesus spoke the truth when he said, "The truth shall make you free."

Regarding the benefits of the two systems they only ask that the people compare results. Christian healing never produced a drunkard or opium-eater, never poisoned a person, never caused a death by administering "the wrong" medicine, never salivated any one, in a word, never injured any one. But at this point some one may quote that stale and oft repeated saying: "Yes, but you let people die without doing anything for them." Now without prejudice let us look at this statement. First, I wish to say that it is unjust for any one even to try to make it appear that I underrate or fail to appreciate and value the physicians who practise the drug system. I believe that the drug physicians of this community are far in advance of the average physicians of most cities of the same size, and no one in this community respects them more highly as men of education, of moral worth and honesty of purpose, than the writer, and personally the most kindly feeling exists between us. Men may be educated, may be honest, may firmly believe they are doing God service, when they are persecuting Christian healers. Before Paul became a Christian himself, he thought he was doing right when he persecuted Christian healers and had them imprisoned. Remember, we are considering systems of healing the sick. If the drug system has been a success—so successful that those who practise that system can give us assurance of even half the length of life that it is evident God intended man to enjoy on earth—then there would be some excuse for them to claim as they do that they should have special laws enacted in their favor, and that all who do not believe in that system should be prosecuted if they refuse to take drugs or employ drug doctors. That the system has not been a success, after having the most favorable laws enacted to assist those who practise it, is a fact admitted to-day by many of the best practitioners of that system. That the drug system is a *curse* to humanity instead of a blessing, I believe with all my heart. My parents worshiped at the drug idol shrine. When but a few weeks old I was left a motherless child. The best physicians of the drug system in America ministered to her. She received the approved treatment of her day, but treatment which the same school to-day declares to be *murderous.* Jesus never practised this system, and never spoke favorably of it. That he spent much of his time in healing all manner of diseases, no Bible student will deny. That he did not rely on drugs to assist him is admitted by all. That he was the Great Physician, Teacher, Demonstrator, and Wayshower has been clearly proven,—that in his practice of the system he inaugurated, he never failed to effect a cure, is certain. This, then, shows the system to be per-

Digitized by Google

fect, and further shows that any failure on the part of those who practise this system is not the fault of the system itself. During the thousands of years since Pagan priests first inaugurated the drug system, there has been a gradual increase in the number of diseases, and in the number of (so-called) remedies used, while the number of (so-called) incurable diseases has steadily increased. Jesus spoke as never man spoke before or since, but never a word did he utter that can possibly be construed in favor of drug medication. On the other hand, he did say, in the presence of the most terrible manifestation of disease, "All things are possible to him that believeth." He manifested and taught the All Power of God. He demonstrated that divine Mind was sufficient to overcome all claims of disease. "Let this Mind be in you," is the Scriptural injunction.

The Christian healer in exercising this Mind does not "let the patient die without doing anything." The Christian Healer uses the word of God, which is said, Hebrews, 4 : 12, to be "quick and powerful, and sharper than any twoedged sword, piercing even to the dividing asunder of soul and spirit, and of the joints and marrow, and is a discerner of the thoughts and intents of the heart." We are also told in this same chapter that we may "come boldly unto the throne of grace, that we may obtain mercy, and find grace to help in time of need." Can you conceive of a more powerful remedy to use than God's word as here described? The Great Physician said to his students, "Ask, and it shall be given you," and assured them in the most emphatic language that our "Father which is in heaven [would] give good things to them that ask him."

Peter and John at the Beautiful Gate did not tell the poor lame sufferer to go for a doctor, or to try drugs, yet they did something for him, which healed him and "All the people saw him walking and praising God." So to-day hundreds of thousands are rejoicing and praising God, because of the revelation that has come to them enabling them to demonstrate that the same Mind which enabled Peter and John to heal and bless, is here in this age to heal and bless; and that no other diploma is needed than such as Peter and John possessed.

Healers to-day act independently of drug idolatry, and the rapidly increasing number of those who are forsaking the great three-face Diana god of the drug temple, is the cause of the frantic effort being made at present to prevent by arbitrary law those who trust God from treating disease by the power of divine Mind as taught by the Great Healer.

The Lectures.

At Lincoln, Neb.

Edward A. Kimball of Chicago, lectured Wednesday, June 28, to a large audience on Christian Science. It was given under the auspices of First Church of Christ, Scientist, at the church edifice corner of Fourteenth and K Streets. His object was to enlighten people on the true meaning of Christian Science. Hon. E. E. Brown, a prominent lawyer and banker of the city, presided at the meeting, and introduced the speaker by a few remarks as follows:—

Ladies and Gentlemen:—When I accepted the invitation extended to me by the ladies of this congregation, to be present on this occasion and introduce the speaker of the evening, my only regret was my ignorance of the subject we have assembled to hear discussed, and owing to pressing business engagements, I should be unable to give any thought to what I might be expected to say concerning it.

Christian Science is to most of us still in its infancy, but this is an age of rapid development and scientific research, and I am not sorry to learn that some of our best thinkers and brightest intellects are giving to this subject a careful and thorough investigation. History teaches us that the promulgation of every newly discovered scientific truth, and more particularly those which pertain to our moral and spiritual well being, meet with strong opposition, and not unfrequently with the ridicule and contempt of the conservative element of society. But it is not to the conservative element of society, that the world is most deeply indebted for its rapid development of either scientific or spiritual truth, but rather to the radical minority, who, when they discover a truth, have the courage to proclaim it, and are not deterred from so doing, through fear that it may not meet with public favor, and render them unpopular.

I am told that the object and aim of Christian Science is, in a word, to alleviate the sufferings and augment the happiness of the human race—certainly this is a "consummation devoutly to be wished."

How this can be accomplished, should receive the careful attention, and zealous support of all good citizens. St. Paul tells us to "prove all things and hold fast that which is good." We should gladly seek, carefully investigate, and be slow to condemn, any science or plan which has for its object, so grand and noble a purpose. How this science will accomplish this end is what we have met here to-night to learn, and as our instructor, I have the pleasure of introducing to you, Mr. Edward A. Kimball of Chicago, who will address you.—*Nebraska State Journal.*

At Pana, Ill.

An audience which completely filled the first floor, and overflowed into the balcony of the New Grand Opera House, assembled to hear Edward A. Kimball of Chicago, lecture Sunday afternoon, June 11, on "Christian Science; What It Is."

Mr. Kimball spoke without notes for nearly two hours, and not only charmed his audience with his easy manners, fine presence, and easy flow of language, but also commanded and held their attention by the logical presentation of his subject. The audience was a mixed one, all classes being present.

Mr. Kimball was introduced by Rev. Dr. Clarke, Pastor Emeritus of the Presbyterian Church of this city. His remarks were brief, well worded, and delivered in that manner which has endeared him to the Pana public. In substance he said that he was glad of this opportunity for the people of Pana to hear more about what Christian Science is; that he thought all science should be Christian and Christianity should be scientific; that any religion that accepted Jesus Christ should be respected; that many doctrines had been misrepresented; that he knew his own had been; and that he was glad to hear something of Christian Science from one having authority.—*Weekly Palladium.*

At Washington, Ia.

Thursday, June 22, a lecture was delivered by Edward A. Kimball of Chicago, at the Opera House, under the auspices of the First Church of Christ, Scientist. The speaker was introduced by Prof. C. M. Grumbling, Principal of the Washington Academy.

The audience was a representative one, containing some of our best citizens. We have already experienced good results from the lecture. I enclose a clipping from one of our local papers, the *Washington (Ia.) Democrat.*

"Mr. Kimball, the Christian Science lecturer, drew a big house and is a very excellent speaker. He set folks to thinking, and even if they don't believe his theories they will be slower to condemn them. It is not wise nor fair

Digitized by Google

nor smart to condemn what we do not understand. He made a good impression here."

MRS. ELLEN E. EVERSON.

At Marshall, Mich.

The lecture given at the Opera House by Edward A. Kimball of Chicago, under the auspices of the First Church of Christ, Scientist, of this city, Monday evening, June 5, was fairly well attended, considering the disagreeable weather, a large proportion of the audience being ladies. Mr. Kimball is an intelligent appearing gentleman.

Starting with a quotation from Gov. Sterling Morton of Nebraska to the effect that if the promises of Christian Science were true then the millennium would come, the speaker announced as his text, "The Promises of Christian Science." He claimed that the mass of people who oppose it do so through ignorance of its principles and practice.

The audience was very attentive and evidently interested in the subject.—*Statesman.*

At Indianapolis, Ind.

An audience of representative Indianapolis people, which almost filled the large assembly-room at the Propylæum, listened to an interesting lecture Tuesday evening, March 14, on the principles and practice of Christian Science, delivered by Edward A. Kimball of Chicago. In the audience were many unbelievers, but they were forced to admit the plausibility of the speaker's argument. The audience was democratic, and consisted of people from every walk in life. The speaker was introduced by J. Guy Haugh of this city.—*Journal.*

At Bunch, Ia.

Edward A. Kimball of Chicago, lectured at the Fox River Church of Christ, Scientist, Sunday, June 25, to a large and intelligent audience. Christian Scientists were present from Brazil, Centerville, Moulton, and Bloomfield. The lecture was a strong one and was well received. Much good will come of it. P. I. KINSINGER.

The New Life in Christian Science.

BY BERT POOLE.

ON looking back over the past three years, they seem indeed like the mortal dream which Science and Health tells us is the condition of most of earth's millions. My only thought in writing this experience is to help and encourage those men in professional life from whom the juice and joy seems to have vanished.

I can say of a truth, I was driven to take Christian Science. Also, that my mind could not go back to its former attitude of what constitutes existence, to the position which I held up to May 1, 1898.

From 1879 to 1889 I was a fairly prosperous artist of the commercial type. Without academic training, I had followed lines of picture-making that were commercialized, and I traveled much. Moving to Boston in 1889, a studio was opened, and a hard struggle ensued in the endeavor to become established in a home line, so as to be with our growing family of four children, also to allay the nervousness of my wife, who suffered mentally during my enforced absences on business trips. With varying fortunes for a year or two, a position was obtained on one of the city papers as cartoonist. I had not the art-training necessary to satisfy my own mind, but the work seemed to suit my employers, and for two years the position was retained. Then came a wish to secure a larger income, and I again set up a studio for myself. For four years success seemed to be coming my way, and all I thought and planned for was to increase my income and become famous. I became mad with ambition, and the praises and encouragement of publishers and friends only made me blind.

Through the blindness, however, I was ever mindful of the fact that my work was technically faulty, though graphically effective.

I studied nights to remedy these faults, and partially succeeded, but the frequently unreasonable demands for work and constant attention to them, not wishing to disappoint good patrons, together with the night and Sunday studying, ground me down to a rut of servile work which I began to wish to throw off. With all the newspaper work which came to me I had developed a platform cartoon field, and made frequent lecture trips and engagements which were invariably followed by busy days in the studio.

In the spring of 1895 a letter was received from a manager in the West offering me a position to travel with the late Bill Nye, to illustrate his lectures on the platform while he spoke, and also to perform some of my own specialties in cartoons while I spoke. In June we met in Washington, articles were signed, and we were to "star" the country as the Bill Nye-Bert Poole Combination. In October we started on the trip. My salary was a big one, and the engagement was for twenty-two weeks. How my pulses beat. The goal was reached. I was to become known throughout the land, and with it all, fortune was to perch on my banner the while, and I could go to Paris in the summer and study. Then, if our season was a success, others were to follow and a competency would be secured. Well, we started in. I had spent several hundreds in fitting out and was a little in debt.

Before we had proceeded a week it was apparent to the "combination" that all was not well. Mr. Nye was in failing health; he would not acknowledge it to us, but rather avoided the subject. Although we had bookings weeks ahead, owing to the above condition, within two weeks we "busted," as show people say, and "dispersed to our several homes."

The collapse came so suddenly that my mind was in a daze.

What should be done? For a month I did hustle round and succeeded in filling several of our dates with other talent. But that soon ended. Then came a week at a well-known vaudeville house.

This was followed by an offer from a Western house of a twelve weeks' engagement at a good price in vaudeville. This was not accepted for one reason: Sunday work was to be a feature, and I declined to play the role of entertainer on the Sabbath. I was called a fool. Then a New York bureau offered the inducement of $100 a night to entertain Hebrew clubs on Sunday nights. This also was declined.

Fool, again. Then hard times, as we call it, set in. I became discouraged at ill fortune, and at the thought that as I had tried to be honorable that reverses should be so thrust upon me. During all these years I had been an active Methodist. But I wandered a long way from God in thought. Although I used frequently to study and work at the problems of life on Sunday, still I could not bring my thought to do entertaining on that day. So while in the midst of unrequited work, accumulating debt, and a sorry existence, hope again came in May, 1897, with an offer of an exceptional position on a prominent youth's periodical. A glad summer followed, and with a small salary comparative happiness reigned again.

In the fall it was found that the confinement of the office life and insufficient light at my desk were breaking down my health. A nervous malady developed to an alarming extent. In the March following, the work and worry of my physical and mental condition developed into an utter prostration, and I came home and remained in bed about two weeks. The firm, not wishing to support sick people, wrote a nice little note, saying that "owing to the slackness," etc.

Digitized by Google

And so I was discharged from the custody of that prison. In April I was asked to look into Christian Science, but I only laughed at my good mother, who proposed it. Nevertheless, early in May I wrote the following letter to a friend who I knew was a Scientist: "If you can tell me what it is the Scientists do to cure a man that they say is never sick, I should like to hear about it. I am sick, and I know it, and although I haven't brains enough left to grasp an idea, I am willing to have it *pumped* into me if you have the pump.' The good fellow responded with alacrity, and lent me Science and Health. On the car homewards I opened the book and read, "Leaning on the sustaining Infinite, to-day is big with blessings." I felt at once that here was something at least to lean upon—and what better than the Infinite? And then the thought, "Will this book tell me how to find the Infinite? I fear it will be full of a lot of Bible quotations to learn and all that sort of drudgery." But no. I read on and found that the "key" unlocked the Scriptures, not the words of them, but the *Thoughts,* the *Spirit,* the *Truth* of the Book of books.

I had been having the evening papers read to me while reclining on the lounge, and listening with closed eyes and throbbing head. This night I took up the new book, and sitting by the light began to read. For three or four months I had not done this. My wife looked on in silent wonder, but said nothing for some time. I had been retiring at eight o'clock exhausted, weary, and discouraged. This night I read till after nine o'clock, until admonished that I would be sick. I knew differently, but let the book drop and retired, feeling that as sure as the sun would rise, so would I the next morning, feeling better. I had been having worrying, fitful, sleepless nights. This time I slept till morning, and rose with a light heart instead of dire dread.

I took the book and read it all the way to the city on the car. I was seeking a business opening, but did not feel as if I could recommend myself as being in good physical and mental trim until this morning.

The joy I began to have was unbounded as the grand verities of man's immortality unfolded themselves through the pages of the precious book. Then the Friday night meeting was attended, and the presence of so many in the Truth acted as a calming influence upon me that passes description. The weeks went by and the summer came. I did not cease to make endeavors to obtain a business opening. The dreaded dizziness and fear of evil happenings well-nigh vanished. Only rarely did they return, and then more as a disturbed memory than as the old trouble. And now the way broadens and brightens in Science. The lessons, the services, the grand testimonies, the living presence of the divine Truth, helpful words from other Scientists, and the unfolding of the Christ-thought in the Scriptures, Science and Health, and the various publications from the pen of our Leader; all these make me very grateful for the day that I turned, a groping, sick, weary mortal, to find, at the first step of seeking, the grandest and most simple system of knowledge by which man can understand his oneness with God. Every day brings proof of the futility of mortal mind and fleeting dust to set up any valid claims for us to depend upon.

In the early fall, I again entered the field of commercialized art work. With a clear, calm realization of the abundance contained in Truth and right living, and an industrious determination, work was cheerfully begun. Need I tell the Field that we have lacked nothing? The ventures paid moderately well, and we have been able to make those to whom we owe gratitude as well as money wear smiling faces.

There remains with me the ever-sustaining thought of God's presence, every hour, every moment. Mortal thought used to say, "you cannot live on thoughts." God's Truth demonstrated teaches that right thinking brings the capacity to perform right things, to use right methods at opportune times. And all this without anxious care and distrust. How can His children worry and dishonor the Father when all reality is Mind? Eternity is now. We are in the midst of it as really as we ever shall be. Toiling honestly brings its own sweet sense of living for others and not for self.

And so the new life in Christian Science is just beginning. There is constant but glorious work to do for God, whose image and likeness we are, and while our friends who do not yet see the light think we are impractical dreamers, the evidences to the contrary are too numerous to allow that thought to prevail always. Ours is a life to be lived. We are to show by signs following that we are Christ's true disciples, and demonstrate the beautiful, uplifting truth of the Scripture. "To him that overcometh will I give to eat of the tree of life which is in the midst of the paradise of God" (Revelation, 2 : 7).

Battle with Error Described.

THE letter given below is from a man who was, but a short time ago, in the greatest distress. He had become such a slave to the appetite for liquor that he had lost his self-respect and had about ceased to make any pretence of supporting his family. At last his wife and child were literally turned out into the street on account of not having money to pay rent.

From the street, the wife and child were taken into the home of a neighboring woman who is a Christian Scientist. This woman poured into the ears of her homeless sister the good news of Christian Science—told her that her husband could be healed of his sins and be restored to her and her child, clothed, and in his right mind. The faithful wife heard the news gladly and told her husband, who after much hesitation called upon a business man in St. Louis to whom his wife's friend had given him a letter.

The result of his interview was very remarkable. The business man explained some things about Christian Science, showing his visitor how it would take away all desire to do wrong. The visitor's heart was open to receive the words spoken together with the loving thought back of them. The man went his way. In a few days he returned to the Christian Scientist with the astonishing information that all desire for liquor had left him. He was overjoyed, and from that day he turned toward God with his whole heart and has been wondrously blessed.

A position was secured for him to represent an Eastern concern. He took hold of the work vigorously and was seemingly getting along very successfully when he received a message one Sunday morning on his way to church saying that the firm which he represented had failed, and that he must not expect to receive anything that was due him. This sudden reversal was a severe trial of his faith for a little while, but the firmness with which his friend,—the Christian Science business man,—held him to the Truth prevailed over his doubts, and he faced the whole matter as a claim of error and nothing more. The friend, who happened to know the men in the defunct concern, wrote to them in behalf of his *protege,* demanding that he be paid.

At this point the struggle with error became very interesting. The letter shows in detail how it was fought out with Truth for a "shield and buckler."

St. Louis, June 2, 1899.

My Dear Mr. H.:—I will not do more than refer to the New York position, in connection with which you will recall my mentioning, that the "confusion" would cause me to do some demonstrating to meet expenses that I had calculated would have been taken care of by revenue from that source. Well, on Tuesday I started out to hustle, re-

Digitized by Google

lying upon God's guidance to show me how. It was practically my first experience in demonstrating from a Christian Science standpoint. I did not forget your assurance that everything would be all right, and certainly not God's assurance that "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

Nothing materialized Tuesday, though it seemed to me that I had worked hard and tried to do right. Late in the afternoon while sitting at my desk, error suggested "Why not borrow enough to tide over?" when along you came and invited me to ride home with you. I accepted the invitation, and, I am ashamed to admit, error went with me, suggesting, "Ask him." "The Lord shall preserve thee from all evil: he shall preserve thy soul," I repeated. Well, I did not ask you, but went home and told my wife I was sure everything would be all right to-morrow.

Wednesday I hustled hard all day and met with no better success than on Tuesday. I rode home with you again, and found the same old error was as usual with me. "Borrow from him, for he is going away to-morrow morning—last chance you will have," again suggested error. I did not ask you and went home with five cents in my pocket.

Error followed me home. There I found my dear wife and boy waiting for me and getting ready to go to church. With voice perhaps a trifle shaky I told my wife that nothing had yet materialized. She could see from my manner that I was disappointed, and although she too looked disappointed, she was brave and true and assured me that she knew I had done my best and what was right.

What thoughts ran through my mind can only be conjectured by those who have been placed in a similar position. Was it possible that I had not followed God's guidance, and that I should after all have asked you or some one else, and had I not better start out to find some one to borrow from? As a matter of fact, I did actually start from the house with that object in view. I did not go far, however, before I returned home,—error still with me,—although it did not stay much longer after my wife and I both agreed that if God had intended I should borrow from you or any one else, I would have been guided to do so during the day.

We both felt that "God moves in a mysterious way His wonders to perform," for while we felt that we had done our very best, we did not see why nothing had materialized. Perhaps we did not understand the full import and meaning of "Thy will be done." Anyway we settled down for the evening searching Science and Health for light and comfort, but somehow my mind did not seem clear. Was it possible we were not worthy to receive God's help? Everything seemed dark. I turned to the evening lesson in "Daily Light," May 31, for comfort. It reads, "He that wavereth is like a wave of the sea, driven with wind and tossed. . . . Let not that man think that he shall receive anything of the Lord. . . . I marvel that ye are so soon removed from him that called you into the grace of Christ." I felt that this could not apply to me, for when I accepted Truth in all sincerity, God promised that the Lord would preserve me from all evil, would preserve my soul, and even further, the Lord promised to preserve my "going out and my coming in, from that time forth, and even for evermore." Now do you believe that any child of God with such bracing support as this could waver? No sir; therefore it could not apply to my wife and me.

With this returning confidence I turned back to Science and Health, and seemed to have a clearer understanding. I awoke in the morning more confident than ever that everything would come out all right. All thought of borrowing had vanished, even if I did have only a nickel in my pocket for immediate use. I knew that my friend, with his great big heart, was going away, and I wanted to get down in time to shake hands and bid him good-bye, but all thought of borrowing from him or any one else had gone, I hope forever.

My dear wife awoke with the same confidence, that everything would be right. That morning I started down town with a clearer realization and conviction that God is All-in-all and the source of supply, and while I did not get to the station in time to talk with you before you left, I really believe I was glad you had gone, for who knows had I met you, error might have fought me another round, to say nothing of perhaps causing my friend to be led into temptation. God's will had to be done, and nothing should stop it. When I saw you run for your train I felt more stable in my ways, more confident, and firmer in my belief that God is all. I know I showed it in my manner and in every way. I went among my old insurance acquaintances and business associates during the day, and instead of finding they were trying to take my renewals away from me, they had actually started in to take care of them for me. One man in particular, F., shook hands and greeted me more cordially than he has at any time in the last seven years. My first day's commissions came close to thirty dollars. Friday was a good day, and so was to-day. Everything looks well, and then last, but not least comes the following telegram, which speaks for itself:

"New York, June 2, 1899.

"C. H. H., Union Trust Building, St. Louis.

"Mailed check to-day for $116.—A. L."

Has Christian Science done anything for me? Who will say no? My dear wife and boy and I, who ought to know, will say yes. You will say yes too, for you it was who first pointed out the way. So will Mrs. H. say yes, for it was she who, with a heart full of love for my dear wife, gave her a letter of introduction for me to you—and I believe every one whom it is my pleasure to meet and do business with will soon be able to testify favorably, for God says that as a *branch* of the *Vine* I will bear fruit.

Very truly yours,

G. M.

A Profitable Meeting.

THE Wednesday evening meeting at the First Church of Christ, Scientist, this week, was such a demonstration of loyalty to Christian Science and its Founder, Mary Baker Eddy, that I feel impelled to send a report of it to the Field.

After the usual opening exercises, the leader of the meeting read extracts from a pamphlet entitled "Christian Science History," contradicting some malicious attacks made upon Christian Science and its Founder. The reading was listened to with profound interest by all present, after which the meeting was given to the people for testimonies.

It was remarkable that all who spoke were men. All the testimonies given were expressions of a firm, unfaltering conviction that Christian Science is the Truth which redeems men from sin and sickness. It seemed as though the supporting power of the masculine element was there represented, acknowledging and protecting the young child—the spiritual idea—and its mother, the Discoverer and Founder of Christian Science, when malice, hate, and envy were aiming to injure them.

ERNESTINE W. BRACH, Chicago, Ill.

From Altoona, Pa.

THE Altoona Church of Christ, Scientist, have had the pleasure of placing "Science and Health with Key to the

Digitized by Google

Scriptures," by Rev. Mary Baker G. Eddy, in the Altoona Mechanics' Library. The Christian Science Publishing Society, at our request, have kindly placed the *Journal* and the *Sentinel* in the same library.

We are a handful of students, or more properly seekers after Truth, having been started wrongly and led in mortal mind ways until error destroyed itself and left us with the Bible and Science and Health as our Leader. For nearly four years we have been struggling along. Some of our members, probably a dozen, are members of the Mother Church. W. W. BURBANK.

About Man.

Dear Editor:—I send you a clipping from the *New England Magazine* which will fully explain to you what you are made of, and I have no doubt that you will be grateful to me for forwarding this information. It is as follows:—

All the constituents of a man weighing one hundred and fifty pounds are contained in twelve hundred ordinary eggs. There is enough gas in a man to fill a gasometer of 3,649 cubic feet; enough hydrogen to fill a balloon that would lift himself; enough iron to make seven tacks; enough fat to make three to seven pounds of candles as well as a good cake of soap; enough carbon to make sixty-five gross of lead pencils, and enough phosphorous to make 8,064 boxes of matches. Six salt cellars full of salt, a good bowlful of sugar, and a nine and one-half-gallon cask of water are other component parts.

I think, however, in your case, being an editor, letting your light shine so well, and doing so much *pencil work*, the supply of *carbon* is somewhat used up, and would probably not equal sixty-five gross of pencils, also the seven pounds of candles must be short. I want you to understand, too, that in your case I draw the line at the *gas* constituent,—for I have never seen any such indications.

But to be serious, if mortal mind knows what its frame is composed of, why hasn't it enough sense to know, too, that carbon, phosphorous, iron, water, etc., can't get sick when in the form of a body any quicker than otherwise.

W. B. Dickson.

Miscellany.

Christian Science Brought Relief.

To the Editor Boston Traveler:—In a recent *Traveler* my father, Mr. H. H. Maxcey, writes in regard to Christian Science treatment of my mother, and, in love for her who has left us, I would like to put before the world what I know would be her thoughts in relation to it. I will take up my father's word where he says, "Later" (after surgical operation) "however, she began to fail again. The surgeons could give her no hope other than to keep her as comfortable as possible until the end came." Then it was that this sick and weakened woman listened to stories of Christian Science healing. So far I wish to agree with my father's statement. Up to this point my mother was in almost constant agony and despair; but, to my personal knowledge, as soon as a Christian Science healer took charge of the case a peace and happiness came into her life that was with her to the last. She passed away a firm and trusting believer in God's omnipotent care and love. I know that if she was here again she would turn unhesitatingly to the omnipotent God in time of trouble instead of the physicians, because she knew, as she so often quoted, that "He is my refuge and my fortress: my God; in Him will I trust."—X.

Died in Doctor's Chair.

It was only a nose-bleed that troubled little Eddie McCabe, the nine-year-old son of big Policeman E. J. McCabe, of the Broadway Squad, when he was taken to the office of Dr. Joseph Muir, at 41 West Thirty-sixth Street. A slight operation was necessary, said the physician, to stop the bleeding, and the grandmother, who accompanied the boy, consented.

That the boy might feel no pain, Dr. Muir administered an anæsthetic, and then went on with the operation. When it was all over the doctor tried to arouse his little patient. There was no response. He listened for the beats of the heart. There were none.

They took the body of Eddie home to 408 West Thirty-fourth Street and to-day the distracted parents will bury it.

The New York World.

"The evils we forebode and prophesy," says the *Christian Register*, "we help to create. In religion, sociology, and practical ethics, optimism, and a cheerful outlook will go far toward making life worth living."

When we get to the commands that God has laid down in his Book and follow them, then the church of God is going to have power just as it did in apostolic times. We want the ministers filled with the Spirit of God, and then we want our church officers filled with the Spirit of God. Isn't that the need to-day? I tell you, my friends, when we wake up to this fact, and seek with all our hearts the filling of the Spirit of God, we are going to see signs and wonders. May the day soon come!—MOODY.

In *The Christian Guardian.*

Colonel C. C. Slaughter of Dallas, Texas, is believed to be the cattle king not only of America, but of the world. Colonel Slaughter owns the cattle upon 1,300,000 acres of pasture lands; and, more still, he owns most of the land upon which these cattle graze. Incidentally he also leases and controls 850,000 acres of pasturage on which he has a herd of 50,000 high grade cattle. While none of these are the old long horn steers one thinks of when Texas cattle are mentioned, but all are graded up to the best market standard, yet they are not the main feature of the Colonel's cattle industry. His special pride is a single, separate herd of three thousand Herefords.

Boston Evening Transcript.

A Problem Solved.

He was a hypochondriac, a man of one idea;
That one—that Death lurked near him—inspiring him with fear.
He studied quack advertisements and conjured up new ills;
His system was a storage house for physics, drugs, and pills.
He haunted doctors' offices, and told in great dismay
Of feelings which each healthy man has twenty times a day.
But that which most his ease disturbed was that his frame inclined
Toward spareness, and in consequence grave doubts reigned in his mind.
He squandered half his fortune trying all the "anti-leans,"
Became a daily patron of the "find your weight" machines,
And drank cod liver oil like beer, in order to gain flesh;
But as his weight did not increase, remained in Terror's mesh,
Till one fine day a bright thought came. He said, "I'll bet a hat
What keeps me thin is worrying because I don't get fat."

Questions and Answers.

If it be true that no one will, or can, suffer "eternal punishment," what did Jesus mean when he said: "And these shall go away into everlasting punishment"?

An Earnest Seeker.

The literal meaning of the Greek word *aionios,* which is translated "everlasting" in the common version of the New Testament, is "age-lasting" or "age-abiding," and is so translated by Young, Rotherham, and others. The word *kolasis,* translated "punishment," also means "correction."

By substituting the literal meaning of these two words the text will read, "And these shall go away into age-lasting correcton." This brings out the Scientific sense. It does not mean that the sinner will anywise escape the punishment due for his sin, but it does mean that his punishment will be effectual in correcting him. By "age-lasting correction" is meant a period, of longer or shorter duration, which will suffice to correct all that needs to be corrected. The good and true in each individual consciousness needs no correction, for it is of God; but whatever of evil is found therein must be corrected [destroyed] before the individual attains perfection.

Which is more in harmony with the declaration "God is Love," which is so beautifully portrayed in the parable of the Prodigal Son, the teaching that certain human beings will suffer punishment throughout eternity, or that suffering for sin will finally compel all mankind to turn from sin?

What is the purpose of punishment? Is it vindictive or reformatory? Surely the latter is more in harmony with the teaching that God is Love. The former might do for a personal deity whose wrath could endure throughout eternity, and who took pleasure in the suffering of others, but it is not consistent with the character of a loving Father who would have none of His children to be lost, and is patiently drawing them to Himself.

The question arises, If age-lasting punishment is not eternal, what about age-lasting, or everlasting life? Will that likewise come to an end?

By no means. The law of cause and effect is eternal, and so long as the cause exists, the effect is sure to follow. The cause of suffering is sin or error, in some form. When the cause is removed the effect ceases to be, just as the fire goes out naturally, when fuel is no longer added. Punishment endures as long as there is anything that deserves to be punished, but no longer.

God is Life and Life is eternal. God is the cause of all that is real, and the effect must of necessity remain so long as the Cause exists. Age-lasting life endures as long as there is anything that deserves to live. The good, pure, and perfect deserve to live throughout eternity, because God is their author. It follows, then, that the righteous, who because of their right doing inherit everlasting life, have gained the true sense of Life, which is eternal—without end.

***

What authority has the author of "Science and Health with Key to the Scriptures," for using the word Good as a synonym for God? Critics say the use is an improper one.—A. H. S.

Good is the Saxon name for God. All will admit that God is good. As used in this sense the word refers to quality, but Good, when used as a synonym for God, is a proper noun, and means both quantity and quality. By using the word in this way we see that God is not only good, but He is *Good,* meaning thereby that He is the source of all good. Good is infinite, and there is but one Good in the sense that God is the Creator of all that is good. Thus the term Good conveys a thought which is very necessary to a true conception of God, and as used in Christian Science it is right and proper.

A Good Recommendation.

A FEW weeks ago it was my pleasure to spend a few days in Concord, New Hampshire. While there I made the Eagle Hotel my stopping-place. In a conversation with one of the gentlemanly clerks employed at this excellent hostelry, I was given his idea of Christian Scientists, and it was so interesting to me that I venture to pass it along, in the hope that it may indicate to the Field how Scientists are watched, so to speak, to see if they live up to the tenets they profess.

This bright young man said that he had been in the hotel business in other places for several years, and in that time had "roomed" thousands, and thought he knew something of the peculiarities of human nature as shown to hotel clerks. Some time ago he came to Concord, and at that time knew nothing of Christian Science except what he had read against it in the daily press of the country. He was in fact prejudiced against it because of what he did not know, and frankly said so. He said his work in Concord had brought him in contact with hundreds if not thousands of Christian Scientists, and in all his experience he had never fallen in with such a delightful class of people.

It was his statement that in "rooming" all these he had never heard an ill-natured remark or complaint, and he said that this had so impressed him that he told a traveling man only the night previous that if he ever was to seek any religion he should certainly be a Christian Scientist, for he had seen more love expressed by them than by any other class of people he ever met.

These remarks were his honest opinions, and shows the silent influence for the upbuilding of the cause that we all can wield. When we so live that we attract all people to us by Love, we shall be living as we are trying to.

Herbert S. Fuller.

Testimonies.

A man and his wife from the country were among the strangers at one of our Wednesday evening meetings. The man told me he knew nothing about Christian Science, but had heard we did healing work. I told him about it, and after the service he was so impressed with the truth of what he had heard that he said many times before leaving the hall, "This is the Truth as Christ taught it;" he seemed to be full of the thought.

He had been suffering from rheumatism for eighteen years with no help from the doctor, although he had tried everything. The next morning his rheumatism all left him. He came to the next Wednesday evening meeting and gave his testimony. Toward spring he came in with another demonstration of the power of Truth over error. He said he had suffered with pain in his left elbow for two days the previous week, and finally said to his wife, "I fear that old claim has returned. She denied it and the pain left. He said, "I want to tell you something I have never told you. I could not throw with my right hand for twenty years, now I can throw as well as I ever could."

In the latter part of March, 1899, he was sawing logs in the woods. He had an iron wedge under his side of the log, and in some way it flew and struck him on the side of the head landing him some twenty feet away. He was unconscious for an hour and a half, during which time he was carried home and a Christian Scientist sent for. When he regained consciousness he suffered severely from pain in the head. About the time the Christian Scientist received word he fell into a quiet sleep, which lasted about an hour. At noon he was able to eat a hearty dinner. During the afternoon his neighbors came to see whether he was alive or not, and he entertained them by preaching the Truth of Christian Science.

Ellen A. Phelps, Greensburg, Pa.

Healed by Christian Science.

Noble, Iowa, June 11, 1899.

Editor Washington (Ia.) Democrat:—Enclosed you will find a statement of mine that I would like to have you give a place in your paper, as I feel it a duty I owe to God and my fellow-men to acknowledge the great blessing I have received through the understanding of Christian Science. For a number of years I had been a great sufferer, afflicted with kidney and bladder disease in its worst forms. After being treated by a number of the best physicians and trying all kinds of material remedies, I could receive only temporary relief. I gradually grew worse and endured great suffering. I was almost ready to give up in despair; it seemed to me that nothing but death could release me. At this time a friend came to see us, and in our conversation I enquired about his father, knowing he was blind, and to my astonishment he said his father was well and his sight was all right; that he had been healed by Christian Science. He told me there was a Scientist living in Washington, Iowa. I said that if Science could help him, why not me? So I called on this man and told him what I had heard, stated my case to him, and asked him if he thought the Science could do anything for me.

He said "There is nothing impossible with God." I then asked him what was necessary for me to do. He said I must give up all material remedies of every kind. I told him I would try. He then treated me, and to my great joy and thankfulness to God I was healed at once and never had to use material remedies again. He still treated me for some three weeks, in order to destroy my fear and nervousness. Now, some people say that the healing of Christian Science is not permanent; but it has been over three years since I was healed, and I have never been troubled with the complaint since. I was not only made well, but I have felt like a young man again.

Yours sincerely,

JACOB ZINGG.

Healed of Many Ills.

I had been a sufferer from infancy, not knowing what it was to be free from pain five minutes at a time. I seemingly had all the diseases that flesh is heir to. The physicians said that no part of my body was in its proper condition. I had congestion of the lungs in its worst form and was never without pain. I had four operations performed by the leading physicians of Philadelphia for tumors, and their verdict was I could never be cured, as the tumors would continually grow and have to be removed, and the only way I could exist was by having an operation performed every two years. I remarked to the physician that I could not stand many more operations, as every one was making me less able to go through another, for the torture was almost unbearable and my nerves seemed entirely shattered. The answer was that either operations or death is all that can be done for you. Thanks to Truth I have been perfectly cured, and I now know I am a free citizen not subject to the laws of man, neither indeed can be, for there is only one Power which is God.

I had worn glasses for fifteen years. My eyes were healed and glasses have been thrown aside. I was also healed of many other diseases. After suffering many things of many physicians and was no better but rather grew worse, I heard of Christian Science. What an awakening it was! I found that I was relying on the knowledge of man to heal me instead of on the power of God, who is the all and only Power. I saw that if I would only become as a little child, willing to be guided by Him and obey Him, I should realize that in Him is perfect health and be free indeed, no longer bound by the chains of slavery, for that was certainly my condition.

Florence E. Nichuals, Camden, N. J.

Mental Surgery.

We had a lecture recently from Mr. Edward A. Kimball. For some days the passage of Scripture that kept recurring to my attention was, "I shall be satisfied, when I awake, with thy likeness." In preparing for the lecture I knew "Truth satisfies all." After the lecture we had an hour's ride to take home a Scientist who is our healer, and, of course, we talked of the lecture, with gratitude for every detail. It uncovered so much to handle. When finally settled for the night, the unexpected happened.

The middle of my face felt so queer! what could it be? The bridge of my nose seemed to wriggle. No possible volition of mine could move it without hands! At once I realized, "Divine Mind is healing the fracture." I went to sleep.

Eight or more years ago, the bridge of my nose was broken during a cable car fracas. The lower part of the bone could be moved, and the break was evident.

The morning after the lecture, when I awoke, the nose was all right except for a slight swelling which disappeared with a treatment. Of course, it continues to be all right.

W. W. K., La Crosse, Wis.

St. Vitus' Dance.

A young man who works in a shingle mill, had what is called cedar poison in his hand, and was laid up for several weeks. He was under the doctor's care and had it lanced several times, but it did not heal. At last, becoming alarmed about it, he applied for Christian Science treatment. Within one week his hand was healed and he went back to work, and has had no trouble with it since.

A young girl was taken with St. Vitus' dance in its worst form. She could not feed herself nor talk without breaking down and crying. She doctored two or three months, but only grew worse. The doctor said it would take a year or more to cure her, and it would be likely to affect her mind. The family having received help before in Christian Science, concluded they would have her treated, and in three weeks the girl was well and is in perfect health.

Mrs. C. F. Buchanan, Whatcom, Wash.

Rheumatism Healed.

I would like to give a demonstration of Truth over error, in the healing of rheumatism by reading the Sunday lesson, without any thought of overcoming the error at that time and in that way.

I had been suffering with rheumatism in my shoulder for two days, and had not been able to overcome it. when I went to meeting Sunday morning. While reading the lesson in the class I forgot all about self. I was so wholly absorbed in the lesson that I knew nothing about bodily conditions and they could not trouble me. I thought nothing more about the rheumatism until that evening, when I found it had entirely disappeared and I have felt nothing of it since. This experience illustrates the statement in Science and Health, page 319, line 27.

Ira R. Simmons, York, Neb.

Notice.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this list is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send order to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3 00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5 75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen; all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH*."—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., JULY 20, 1899. | Vol. 1 No. 47

A Modern View of Inspiration.

Professor Morgan an Advocate of the Higher Criticism.

THE following article, which was published in the *Christian Oracle* of Chicago, contains the views of Professor Oscar T. Morgan, who was removed from the chair of Sanscrit, Hebrew, and Greek in Drake University, because he would not refrain from teaching his views.

In view of the fact that a widely circulated statement has gone out to the daily papers in regard to my disbelief in the inspiration of the Bible, and in response to an invitation from the *Oracle* management, I am glad to make the following statement concerning my position on the inspiration of the Bible. I do not do this as a matter of personal defense. The effect that the report may have on my individual prospects does not greatly concern me. But for the sake of Drake University, and for fear that some hesitating soul may be made to stumble over the supposed fact that one who has been a teacher of the Bible has been led to deny its inspiration, some explanation seems to be demanded.

I have never expressed nor do I have any doubts whatever as to the inspiration of the Bible, or that it contains —or is, if you prefer that form of expression—a revelation from God. In spite of this fact, however, I am not ready to give a definition of inspiration. It is much easier to observe what inspiration does than to tell what it is. It is a process and not merely a fact; a mode of operation and not a result simply. Jesus has forever set an embargo upon the effort to limit the operations of the spirit by a definition. When Nicodemus wanted him to state just how the spirit works in the new birth, he told him that the operations of the spirit are like the activities of the wind; its results may be known, but the process must remain undefined.

✠

A comparative study of the nations of antiquity reveals the fact that there was a force, a life, in Israel such as was found in no contemporary nation. A further study reveals the fact that their uniqueness does not consist in their greater knowledge of science, in their artistic ability, nor in their general education. Their claims to attention rest entirely on their religious and moral supremacy; on those things which they would get by a close touch and walk with God. The footprints of God are seen in their lives. As we read their literature, we are enabled to see God as we do in no other books. Nowhere else do we get such a revelation of God, or so feel the presence of the Divine Spirit. If then by the application of the most rigid principles of logic, we can discover the power of God in the Hebrew nation, and see the fruits of the Divine life, what reasonable man can doubt that God, from whom alone these things can come, was in this nation as He was in no other?

If He was in their daily lives, shaping them in accordance with the Divine ideal, it would be strangely inconsistent to hold that He is not in their writings. Was He with them except when they sat down to write, and then did He desert them? That would be strange reasoning, indeed. An uninspired record of an inspired history would be worth much to us; but an inspired record of an inspired history is invaluable if an inspired history is invaluable.

✠

Is it any more logical to say that they were not inspired except when they were writing? David could make mistakes and commit sins in his ordinary life. Was he miraculously preserved from such errors when he was writing psalms? Are we bound to endorse all the utterances of the imprecatory psalms? I am fully aware of the objection that is raised that if there are mistakes in the Bible, we do not know what is right and what is wrong. This will weigh with equal force against the value of David's life. The Bible is not careful always to tell just when its heroes are doing wrong. It does not tell us that it was wrong for Abraham to lie to Pharaoh about his wife, nor that God did not approve the life of David when he was living as a freebooter. Are we then to decide that the lives of Abraham and David are worth nothing to us as examples? No candid person would so reason. If, then, we can select out the right from the wrong in a life, why can we not do so in a book? Was God more concerned that David should reveal Him to future generations through his writings than that he should reveal Him to his contemporaries by his life?

While we are all willing to recognize the divine element in the Old Testament, the cause of truth gains nothing by denying the human element. The message came from God, but it came through men, and it must necessarily have been colored by the medium. God cannot give to a man a fuller revelation than he is capable of receiving. Even though God would give to man a full truth, he sometimes can understand and receive but half of it.

The Bible is the product of God's effort to reveal Himself to the world. As Luther said, it is the record of man's experience with God. It is the interpretation which men made of the life of God which they saw about them. What we have in our minds is an interpretation of this interpretation. For the Bible then to be an infallible guide to our mind, our interpretation must be infallible. Infallibility does not lie in us, nor in the Bible; but in the life which

Digitized by Google

the Bible portrays. Herein is found the superior value of the New Testament over the Old. In the Old Testament, we have the record of God's revelation of Himself through imperfect man. In the New Testament, He is incarnated and revealed through a perfect One: His own Son. Christ was able to reveal God because he embodied the life of God. The apostles were able to reflect the life of Christ because he had come into their lives, and they were dominated by his spirit. They would have been unresponsive indeed, if they could have associated with that life for three years and not have been inspired by it.

After all, as has been often said, the best proof to us of the inspiration of the Bible is that it inspires us; it comes into our lives and asserts its authority over us as we read. If it fails in this, whatever theory of inspiration we may hold, it is not inspired for us. We demonstrate the power of the Bible by showing that its truths have produced in us a life devoted to God and right.

Such, imperfectly but honestly expressed, are my views on inspiration. I have not taken the trouble to investigate whether they are orthodox or not. By this I am ready to stand or fall. They have made the Bible a new and more valuable book to me. If the views are not orthodox, so much the worse for orthodoxy. They are true.

Items of Interest.

The speech which Aguinaldo made during the recent celebration at Tarlac of the anniversary of the proclamation of Filipino independence, shows that he has not weakened. He encouraged the Filipinos to defend their fatherland until independence is secured, assuring them that at last the great American nation will acknowledge the right which is on their side. He said, "The doctrine of the great Monroe, that America is for Americans, is not forgotten, just as we affirm that the Philippines are for the Filipinos." This declaration of defiance is accepted as final, and practically removes all hopes of surrender.

The Young Men's Christian Association at the Philippines reports that they distributed during March and April twenty-three hundred papers and magazines, 1050 colportage books and 350 New Testaments. Religious services have been conducted at the Philippine Theatre in Manila and at the First Division Hospital with an attendance of seventy-five or one hundred convalescents every Sunday afternoon.

Owing to the great influx of Cubans into Bayamo, province of Santiago, in expectation of payment for the surrender of arms, the merchants attempted to profit by the situation and raised prices beyond reason. The mayor of the city issued an order regulating prices and providing a heavy fine for violation of the order. As a result food is now cheap and liquor high.

The Secretary of State has replied to Ambassador Cambon of France, that the government is not liable for damages to Miss Ivan Favre who was a passenger on the French steamer Olinde Rodriguez which was captured by the cruiser New Orleans, during the blockade of San Juan. The answer will establish a precedent in a large number of similar claims.

The Chinese consul-general objects to the decision of Governor-General Brooke that commercial treaties between Spain and other foreign countries do not apply to Cuba as was formerly the case, and future treaty arrangements must be made with the United States in the name of Cuba. The ground of his objections is the fear of immigration restrictions.

Information is received that Queen Wilhelmina personally thanked Ambassador White, the head of the American delegation to the Peace Conference, for the American tribute to Grotius, and expressed special admiration for Mr. White's speech on the occasion of placing the tribute on Grotius's tomb at Delft.

General Otis has cabled that about one thousand of the volunteers now in the Philippines will re-enlist. Those who do so will receive travel pay from Manila to the place of original enlistment in the United States, amounting in most cases, to about four hundred and fifty dollars.

The Carnegie Steel Company has signed a contract with the Russian government for the largest order of steel ever given in the history of the world. The contract calls for one hundred and eighty thousand tons of steel rails which is enough to lay thirteen hundred miles of road.

During the month of June the imports of merchandise into the United States amounted to $61,686,208. The exports for the same month were $94,828,732. The imports of merchandise during the fiscal year amounted to $697,077,338, while the exports were $1,227,433,425.

The Citizens Railway of Detroit, Mich., has inaugurated three-cent fares. It is supposed that the move is made with the idea of influencing the people toward Governor Pingree's municipal ownership scheme, which has for its object the institution of three-cent fares.

The sixth annual convention of the National Association of the Deaf opened at St. Paul, Minn., July 11. Fully two hundred delegates were present. Governor Lind and Mayor Kiefer welcomed the guests, their remarks being duly interpreted for the deaf mutes.

The delegates to the Peace Conference were entertained at a magnificent banquet, July 7, in the palace at Amsterdam. Queen Wilhelmina made an address which was responded to by the President of the Conference, M. de Staal.

A large co-operative colony is to be established near Toledo, Ohio. It is the intention to build a city which will engage in a commercial trade, the profits of which are to be divided equally among the men of the colony.

The Pressed Steel Car Company of Pittsburg, Pa., is now working its factories twenty-four hours a day and employs six thousand men. Contracts have been closed by the company to supply twelve thousand cars.

During his administration President McKinley has appointed twenty-one separate commissions, with an aggregate membership of nearly one hundred, and at an aggregate expense of more than two million dollars.

One hundred and eighteen warships and twenty-five thousand men will take part in the English naval manœuvres. One of the principal objects of the manœuvres is to study the value of torpedo boat destroyers.

The Peary Arctic Club will send out an expedition to communicate with the explorer on the western coast of Greenland, taking up supplies and bringing back a report of his work during the past twelve months.

A dispatch has been received from General Otis requesting that twenty-five hundred horses be sent to the Philippines in order that a brigade of cavalry may be organized for use at the end of the rainy season.

The letters exchanged between Admirals Dewey and von Diederichs have been published. To the German's congratulations, Dewey replies that he rejoices their differences were of "newspaper manufacture."

Attorney-General Oren of Michigan has declared that the one cent per pound sugar bounty law of 1897 is unconstitutional. The question of constitutionality will be settled by the Supreme Court.

Oberlin Smith of Bridgeton, N. J., says it will not be long before rubber-tired locomotives will be running between New York and Philadelphia. It is simply a question of designing proper rails.

Boston sent thirty-eight hundred dollars to the sufferers from the Texas flood. The amount was the balance of the fund originally raised for the sufferers from the Johnstown, Pa., floods in 1889.

The United States Vehicle Company, with an authorized capital of twenty-five million dollars, has filed a certificate of incorporation at Dover, Del. The company will use compressed air.

Admiral Cervera and the other commanders of the Spanish fleet destroyed in the battle of Santiago, whose conduct was the subject of inquiry by a special court-martial, have been acquitted.

Captain Victor M. Concas, who commanded the Infanta Maria Teresa in the Battle of Santiago, has written an article bitterly arraigning those who precipitated his country into war.

Contracts have been sent to the Carnegie and Bethlehem companies whereby the manufacturers will furnish about twenty-two hundred tons of armor at four hundred dollars per ton.

The municipal government of Cuba will be chosen by the natives as soon as possible. Preparations are being made for taking a census to ascertain the number of qualified voters.

The Hon. William J. Bryan was the principal speaker at the banquet given by the Young Men's Democratic Club of Cleveland, O., July 7. Fully one thousand persons were present.

The President has issued an order through the War Department, extending the privileges and protection of the American flag to the shipping of Porto Rico and the Philippines.

The army transports, Newport and Ohio, arrived at San Francisco, July 12, with the Second Oregon regiment. These are the first troops to return from Manila.

Revenue stamps may now be had in denominations of one hundred, five hundred, and one thousand dollars. Heretofore the highest has been fifty dollars.

The Russian ambassador at Washington says the Philippines have a population of twelve millions instead of eight millions as has been reported.

The Navy Department has dispatched to Admiral Dewey the medal awarded him by an act of Congress to commemorate the battle of Manila Bay.

President McKinley sent a message of condolence to the Czar of Russia upon the occasion of the death of his brother, Prince George of Russia.

The Michigan Supreme Court has decided that the law under which the "Detroit street railway commission" was appointed is unconstitutional.

A number of the delegates to the International Congress of Women were received by Queen Victoria at Windsor on the afternoon of July 7.

The custom receipts at Havana for the month of June were $1,012,899. Total receipts since January 1, 1899, were $5,146,830.

Reports from recruiting offices, show that volunteers are enlisting for service in the Philippines at the rate of two hundred per day.

The ninth annual convention of the Baptist Young People's Union of America assembled at Richmond, Va., July 13, 1899.

The ordinance forbidding the use of automobiles on the boulevards of Chicago has been declared void by Judge Gibbons.

During the fiscal year just closed 16,123 men enlisted in the naval service. Of these, 2,147 were enlisted for the war only.

The total expenditures resulting from the Spanish war up to the close of the last fiscal year were $280,500,000.

A copy of the first folio of Shakespeare was recently sold by auction at London for eighty-five hundred dollars.

A conservative estimate of the loss occasioned by the Texas flood places the amount at eight million dollars.

Professor George Harris of Andover Theological Seminary, has been elected president of Amherst College.

According to the statement of the archbishop of Manila there are about five million Roman Catholics there.

The copper production of the United States in 1898 was over five hundred and twenty-six million pounds.

It is stated that there are 170,000 churches in the United States, and about 232,000 licensed saloons.

A silver dollar bearing date of 1804 was recently sold at Chicago for one thousand dollars.

It is reported at Rennes, France, that the trial of Dreyfus will begin about August 10.

The National Educational Association assembled at Los Angeles, Cal., July 12.

Mt. McKinley in Alaska, is 20,460 feet above sea level.

Admiral Dewey arrived at Port Said July 13.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Unkindness in the Pulpit.

THE wise advice of Gamaliel to his brethren to let the Christians alone, was approved by the other Pharisees and it has been unanimously applauded for nearly nineteen centuries by theologians of all schools, but some of them depart from wisdom occasionally and bitterly attack Christian Science.

Gamaliel said—referring to Peter and the other apostles—"Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: But if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." Ministers of other churches proclaim that their doctrines are true. If their doctrines be true, they surely need not defend them by means of vituperative abuse of Christian Science or of any other doctrine which may to them seem false, for it is a truism that Truth cannot be overthrown by error, and therefore the doctrines held by other churches are in no danger from Christian Science unless they are false, and Christian Science is true.

It would seem that if such ministers have any vital message to preach, any message that is true and that is needed by a sick and sinful world, they should be too busy preaching it to have any time for abusing Christian Scientists, especially when it is a matter of common knowledge that Christian Scientists do not make any effort to gain proselytes in other churches, but strictly mind their own business. It is also a fact of such general knowledge that it is difficult to understand how ministers could fail to be aware of it, that Christian Science has accomplished a vast amount of good in the world, reforming many sinners and healing many sick people, whom, in the one case the older churches had failed to reach; and in the other, the doctors could not cure.

Christian Scientists have no grudge against other denominations. They have no desire to interfere with any good work other churches are doing, but would be glad to see the orthodox churches distributing ten fold richer blessings than they are, even that they should participate in the Christly work of healing the sick as well as of preaching the gospel. Christian Scientists have a better opinion of the possibilities of the orthodox pulpit for doing good, than to think it has nothing better to offer hungry hearts than sermons filled with petty witticisms, unfair and even false statements, and malicious denunciation of Christian Science and Christian Scientists. Surely the least qualified minister of the Gospel even, must realize that he is lowering the standard of Christ's teachings, when he yields to the temptation to preach slander and malice from the sacred desk.

If the ministers of other churches are conscious of the world's great need of even the half of Christ's ministry, to the service of which they have been ordained,—namely the preaching of the Gospel of peace on earth, good will toward men,—how can they excuse themselves for turning aside to foment bitterness and strife?

Christian Scientists would be glad to see the world filled with devoted, love-inspired Christians. Meantime they, themselves are trying to do good in the way which to them seems right. To them it is a source of great comfort to have signs following their preaching of the Gospel, such as in the days of Jesus and the apostles, were considered to be the divine method of proving their teachings true.

Poisoned in Hospitals.

THE following are two cases of death in hospitals, resulting from the blunders of attendants in administering powerful poisons instead of the drugs that were prescribed. The details given in the newspaper accounts of both cases, show how easy it is for such mistakes to occur. The blame should not rest so heavily upon the persons who administered the poison by mistake as upon the system of drugging with all sorts of poisons, which prevails.

When such mistakes can so easily occur under the system of drug treatment, and when they so frequently occur, it is surprising that doctors should have the boldness to condemn Christian Science treatment when it saves such a large percentage of patients who are out of the reach of material methods of treatment, and especially when it is impossible, under Christian Science treatment, for such sad mistakes to happen as in the two cases that follow.

Given Strychnine by Mistake.

Foxboro, July 1.—Although the report of Dr. Charles E. Woodbury, superintendent of the Hospital for Dipsomaniacs at this place, to the State Board of Insanity, relative to the death of Benjamin Gifford, a patient at the institution, shows that Gifford died from apoplexy, still it is admitted by all the officials connected with the hospital that one of the attendants had administered strychnia by mistake.

The case discloses the fact that there are men employed at the hospital as attendants who are regarded as anything but experts, and that some of the duties which they have been called upon to perform are the selection of medicines from the ward medicine chest, which, as shown in the case of Gifford, has also contained dangerous drugs.

It is admitted that Gifford, at least, suffered from an error on the part of his attendant.

These attendants are underpaid, only receiving twenty-five dollars a month, and for this reason no competent persons, it is claimed, try for the positions when there is a vacancy.

The result is, it is said, that men who know almost absolutely nothing of the duties required of them have applied and been given positions as attendants at the institution.

The hospital officials have themselves taken action in the matter, and both Hunnewell and the head attendant, whose place he was taking while the latter was enjoying a twenty-four hours' leave of absence, have been suspended, pending the inquiry.

Gifford was suffering from partial paralysis, both his legs being affected, and he was obliged to use two canes in getting about. Hunnewell, who had only been at the hospital a week, during the absence of the head attendant, had been given instructions by Dr. Woodbury, the superintendent, to administer at intervals to several patients within his charge a dose of iodide of potassium, supposed to contain some one hundred and twenty grains. The solution

Digitized by Google

was in the ward medicine chest, to which the attendants have access, and among the bottles there was one bearing the label of sulphate of strychnia. Hunnewell got mixed up in the choice of the bottles, and soon after had given the patients, four in number, doses of the strychnia, instead of the potassium that Dr. Woodbury had ordered.

Shortly after this Gifford began complaining of violent pains, and said that his muscles felt peculiar. Later the other patients felt the same effect, and the doctors being called in, discovered the error and worked over the men, three of whom fully recovered, but Gifford died of cerebral hemorrhage Wednesday night.

Boston Post, July 2, 1899.

Fatal Mistake.

Coroner Spencer and a jury yesterday afternoon held an inquest into the death of Alice Pollard, who died very suddenly on Wednesday morning at St. Michael's Hospital. The result of the inquiry was the following verdict, which was signed by all the jurymen:—

"We find that the deceased came to her death on June 29, 1899, at St. Michael's Hospital, Toronto, by being accidentally poisoned by carbolic acid. We do further say that the nurse who administered it was in no way to blame, as the solution had been placed in the wrong bottle, and the jury recommend that in future all poisons should be kept in blue glass bottles."

Dr. F. B. McNulty of the house staff was the first witness to be called, and in his evidence the whole story came out, the following being a summary of it:—

Alice Pollard, who was seventeen years of age last April, came to the hospital on June 19 suffering from some internal trouble requiring operation. The operation was performed on June 26, a week later than her arrival. Although it was of a serious nature, she came out of it well, and was improving rapidly, there being no doubt of her ultimate recovery. On Wednesday morning the nurse received orders to give her an enema of sulphate of magnesia. The nurse took from the cupboard a bottle labelled properly, and prepared the dose. While administering it, however, a bubble broke on her finger, and the burning sensation from the acid first apprised her of the mistake. After smelling and tasting the contents of the dose she made sure of its nature, and hastened to Dr. McNulty, who administered antidotes and did his utmost. The dose was given at 10.30 A.M., and the patient died at 12.45.

Dr. Swetnam was the next witness to be called. He was attending Miss Pollard, and upon his order the sulphate of magnesia was to have been given. He understood that instead the patient had received a fifty per cent solution of carbolic acid in a dose of nearly two ounces. The bottles for both medicines, he said, were kept in the same cupboard, in a stock solution, and as both were of identical appearance they would only be distinguishable by the label. Such a dose, Dr. Swetnam said, would burn severely, and the patient had become unconscious after a very short time. In answer to questions by W. Mulock, jun., who acted for deceased's parents, Dr. Swetnam said that he had not operated under any specific permission from Miss Pollard's parents, but that both of them had understood that she had entered the hospital with a view to being restored to health. They had also known that an operation would probably be necessary, and the operation itself had been spoken of in the mother's presence.

The most important witness was the Sister who has charge of the dispensary, and admitted being the cause of the accident. She had had an experience of seven years in the dispensary, and had never had an accident before. She mixes all the plain elementary medicines, and prepares stock solutions. In addition to this she also keeps stocks of various other drugs, among them the carbolic acid, and from them fills the bottles which are sent downstairs when empty. Certain bottles come to her at frequent and regular intervals, and among them are the carbolic acid and the sulphate of magnesia bottles. She presumably became very familiar with these bottles, and when the sulphate of magnesia one was last sent down, being without very distinct labelling, she made a mistake and filled it with carbolic acid. This bottle was sent up-stairs, and from it the nurse administered the poison which caused Miss Pollard's death. She admitted having had no previous course of study, and only depended upon her experience.

Toronto Globe, July 1, 1899.

An Interesting Meeting in New York City.

To the Editor of the Sentinel:—On Thursday evening, July 13, the recently organized Medical and Legal Relief Society of the Metropolis, held a public meeting in the Waldorf-Astoria to consider the question of proposed legislation designed to protect the public from the practice of Christian Science. The meeting was well described by all the city papers, which give much space to it. The *Tribune* describes it in part as follows:—

The meeting, which was held at the Waldorf-Astoria, was attended by more than two hundred influential men and women. Among them were many prominent lawyers, physicians, and clergymen. In organizing the meeting the society promised that to Christian Scientists an opportunity would be afforded for putting forward their reasons why their practices should not be regulated, and the invitation extended to them to be present was responded to by a fairly large number of faith healers. There were others, however, who adhered to the purpose of the meeting, but opposed the idea of restricting the exercise of mental healing, on the ground that it tended to interfere with the liberty of the individual.

A Case in Massachusetts.

It was this oversensitive fear of encroaching upon the constitutional principle of personal liberty that defeated the effort made in Massachusetts to make faith healers amenable to the law. But, as has been frequently contended, this argument carries no weight, inasmuch as the law protects would-be suicides against themselves, and a sick person who trusts for his recovery to the exercise of faith healing powers is apparently somewhat irresponsible so far as his well being is concerned.

No attempt was made last night to commit the meeting to any definite course of action. The purpose of the gathering was solely to discuss the matter from both standpoints, and this resolution was adhered to. The opponents of Christian Scientists, however, made their intention clear to seek restrictive legislation, and a committee will be appointed to-day to devise remedial measures.

Theodore Sutro presided, and among those present were Albert Turner, Mrs. Theodore Sutro, George W. Delano, Alex Gustafson, A. V. Daniels, John D. Benedict, Colonel Michael C. Murphy, Dr. F. H. Dillingham, Albert Day, Dr. George J. Helmer, Dr. J. N. Helmer, Dr. E. C. Helmer, John Sabine Smith, Edward Lauterbach, George R. Phoebus, Alderman Howard P. Okie, George E. Early, Dr. Edward F. Smith, the Rev. Dr. Francis J. Clay Moran, W. F. Lunt, United States General Appraiser; T. W. Burger, and W. W. Urquhart.

In his opening address, Mr. Sutro, after outlining the purpose of the meeting, went on to say: "The immediate operating cause which inspired this meeting has been the startling disclosures which have lately appeared in the public press of cases which unquestionably required the art of surgery and the science of medicine, being treated

Digitized by Google

by Christian Scientists without the accessory of any of the accepted methods of treating illness and disease. Consequently deaths have resulted, and wide interest has been excited by reason of the fatal terminations of these cases throughout the country and even beyond the borders of the United States. It is a very serious matter, and a subject which appeals to our self-interest and our self-preservation. The men who have called this meeting have not done so for the purpose of antagonizing any creed or the so-called Christian Scientist as such, or any method of faith healing as such. But we have felt that when believers in this creed, to bring about results which can only come by the intervention of medicine and surgical instruments, persuade weak-minded people to dispense with these necessary instruments of science, then we think the time has arrived for serious public discussion to ascertain if there is any basis for the contentions of the Christian Scientists, and if there is none, then to appeal to the Legislature to restrain these apparently very dangerous practices."

Alderman Okie's Measure.

After it had been decided to limit each speaker to ten minutes Alderman Okie opened the discussion. He pointed out that the Medical and Legal Relief Society had determined to take the necessary steps to put a stop to the business of teaching people not to seek medical aid. To that end he had drafted a measure which he suggested might be presented to the Legislature, which he read as follows:—

First: A person who advises, persuades or attempts to persuade any other person not to employ medical or surgical aid in a case of illness or physical injury of that other person, or in a case of illness or physical injury of any person influenced or controlled by him, is guilty of a misdemeanor; it is no defence to a prosecution under this section that the defendant did not believe in the existence of such illness or injury.

A person who:

(1) Advises or persuades any person afflicted with illness or physical injury not to employ medical or surgical aid is, if said afflicted person shall die of said illness or physical injury without receiving medical or surgical aid, guilty of manslaughter.

(2) Advises or persuades a person having influence or control over any person afflicted with illness or physical injury not to employ medical or surgical aid for the person so afflicted is, if the person shall die of said illness or physical injury without receiving medical or surgical aid, guilty of manslaughter.

(3) In a prosecution under the preceding section of this act, proof that the person receiving such advice was the husband, wife, father, mother, brother, sister, master, or guardian by appointment or adoption of the deceased is proof that the person bearing such relation to the deceased had influence over him.

"I have put no long sentences in the bill, but I think we might get some good long sentences from it," Mr. Okie grimly remarked. Speaking of Mrs. Eddy, he said that, while she taught in her books that food neither strengthened nor weakened the body, and that clothing was not necessary as a protection from cold, yet she was evidently in need of both, as she charged high prices for her books.

W. F. Lunt strongly opposed such a bill as outlined by Alderman Okie. "It is not in the interest of the citizen," he said, "and such a bill should be opposed by everybody who does not want the shackles of tyranny to rest upon him or his family. I have been a close student of criminal law for many years, and I have never read of anything since the Dark Ages that can compare with its provisions. I should fear to have the liberties of the citizen left in the hands of a Legislature that would pass a bill of this kind, which provides that a person who advises another, shall be guilty of manslaughter if the man dies. Such a thing has never been known in the annals of common law since they pressed witches at Salem." Mr. Lunt was loudly applauded by the Christian Scientists, who were gathered together in one part of the room.

Edward F. Smith also opposed the bill, and then Alex Gustafson made a strong appeal for its adoption. "At present," he said, "Christian Scientists are favored by the law. The law is unable to reach them, despite the fact that they are not qualified to heal. We therefore should advocate that the law be changed, and advocate it in the name of common justice to all."

Mrs. Laura Lathrop then arose to speak and was invited to ascend the platform. She has snow-white hair, a fresh complexion, bright eyes, a mellow voice, and a convincing manner.

"I stand here before you," she said, "the pioneer of Christian Science in this city, a woman who for twenty-three years was a helpless invalid, for whom all the skill of all the doctors could do nothing; but now cured by Christian Science. Nevertheless I do not want to say one word against doctors. They were the best friends I had all through those dreary years. I love physicians. I have treated a good many of them, and I have certificates from them in which they freely acknowledge that they received certain benefits from my treatment which they could not get anywhere else. The trouble is that these doctors who speak against Christian Science do not really know what Christian Science is. They set up a man of straw, in their arguments, for the pleasure of knocking him down again."

A Question Asked.

Alderman Okie here interrupted the speaker by asking permission to put a question to her about the alleged teaching of the Christian Scientists that the body does not really exist.

"We do not deny the existence of the body," replied Mrs. Lathrop. "That is another point on which we are misrepresented. We admit that the mind cannot exist in this world without the body. Our corporeal frame is the embodiment of the mind. When we begin to perceive that God is the one and only Mind in the universe, then we begin to understand that our bodies and minds will be absorbed in the Mind of Christ."

Carol Norton followed Mrs. Lathrop. "All Christian Scientists," he said, "respect the motives of this meeting, but the bill savors too much of paternalism to succeed in a free country. The history of Christian Science is the history of the advance of Christianity. Christian Science is the restoration of a temporarily lost element in the Christian religion. The necessity of healing the sick goes hand in hand with religious duty, and with the healing of disease through mental processes. I speak in the name of two million persons, who got no relief from their ailments from the best physicians in the world, but who were cured by Christian Science. Our ranks are being recruited daily from the ranks of doctors in all the schools of medicine, and I stand ready to give certificates from many of these physicians that Christian Science is to-day healing cancer, consumption, locomotor ataxia, and other diseases too numerous to mention.

"We treat on the basis of mental anatomy, not physical," he added, in reply to an interjected question from Alderman Okie, and then went on to answer the attack which a previous speaker had made on Mrs. Eddy, because she charged a steep price for her book. "Mrs. Eddy," he declared, "has been giving all the money she gets to charity for the last fifteen years."

Christian Science Defined.

Dr. Bond Stow here asked if there was any distinction between faith cure and Christian Science, and the speaker

Digitized by Google

declared that the difference was radical. "The faith curist," he said, "teaches that if enough faith is exercised, God will, in direct answer to the prayer of the sick person and his friends, cure the disease. Christian Science bases its healing on the doctrine of the allness of God, or Mind. The metaphysical therapeutics of the system is based on mental causation, mental cause and effect, and all that relates to the cure of disease as a whole in Christian Science is based on Mind. Christian Science is not faith cure. The systems are at polar extremes, and should not be confounded."

Alderman Okie here urged Mr. Norton to give his opinion of the bill, and the speaker said: "We do not advise against the patient calling in a physician, and we are in harmony with the framers of the proposed bill, if it is amended so as to make it a misdemeanor also for any one to advise a sick man not to call in a Christian Scientist."

Mr. Norton was succeeded on the platform by Mrs. Augusta E. Stetson, for thirteen years pastor, and now First Reader in the First Church of Christ, Scientist. She began to show the beauties of Christian Science, but was called to order by Dr. Stow, who insisted that she speak to the bill. She then said: "As a Christian Scientist I shall never oppose the calling in of a physician by sick persons whom I may be treating."

Alderman Okie asked if she would refuse to treat any longer a patient who called in a doctor. Mrs. Stetson said she would.

"Would not that be practically advice to the patient not to call in a doctor?" she was asked.

"It might be so taken," said Mrs. Stetson boldly, "but that is what I would do."

A. C. Butts, Assistant Corporation Counsel, then introduced some real old Tammany knockdown arguments into the debate, by asserting that all Christian Scientists were of a low order of intellect, and all who had addressed the meeting were abnormally developed in their minds. He challenged them to produce any people who had been cured of what are considered by doctors to be incurable diseases, and insisted that all Christian Scientists were criminals, and as such the Legislature should protect society from their murderous machinations.

E. H. Benn was called on by Chairman Sutro to speak, and he responded with a few words.

"I have no faith in Christian Science. I can see no difference in being cured by this belief and by hypnotism, but I believe that this bill, if passed, will do more harm than good. We have too much legislation, and in this law we should not be fair to those who firmly and conscientiously believe they are doing good, and in some cases are really doing a good work."

The meeting was one of great interest, and was conducted by its chairman in a manner that represented marked justice to the questions under consideration. At an early stage of the meeting it was evident that the majority of the persons present were either directly in favor of Christian Science, or if not avowed adherents, were radical believers in individual liberty and progress in therapeutical science. The physicians of both the so-called regular schools were greatly divided. One would denounce Christian Science healing as a menace to the public health, another would support its methods, and advocate a closer study of mental laws in the practice of medicine. Most of the lawyers present were not of the Christian Science faith, and yet spoke against the proposed law. One doctor said the Christian Scientists had arisen and were taking the very bread and butter out of the mouths of the physicians. Some of the most pointed remarks in opposition showed great ignorance of the system of Christian Science mind-healing.

While the whole meeting was one of great activity and vigor, it went on in a spirit of well-ordered deference, and showed to all present in a most conspicuous way that the Truth and practice of Christian Science cannot be condemned and made unlawful by those who wholly misunderstand it, for broad-minded people, lovers of liberty, progress, and true Christianity, though outside the ranks of Christian Science, come forward in solid phalanx and stand for its truths and uphold the rights of Christian citizenship and progressive living. Very sincerely

CAROL NORTON.

The Future of Religion.

Is religion passing away? Is faith becoming extinct?

Many students of the times are inclined to believe so, because of the decadence of the church. Not only is the church disintegrating into an ever-increasing number of denominations, but in all denominations heresy has taken root.

Higher criticism has undermined many an old established belief, and the advance of science has destroyed many a cherished superstition. Liberal ideas are spreading in both pulpit and pew. Pastor and people alike give nominal credence to outworn doctrines which they no longer, at heart, believe. Where is the end? What creed or what tenet is secure from attack?

In the mean time, the so-called liberal churches, which are in reality highly illiberal in their antagonism to traditional faith, are struggling to establish a new religion. But their efforts are, unfortunately, barren of spiritual results.

Lyceums of culture they often are, and noble philanthropic institutions, but churches, never, in the true sense of the word. They are monuments to the truth that moral philosophy is not adequate to the higher needs of mankind.

Something is lacking. There is one important omission. They try to construct a religion without worship, which is an anomaly, an impossibility. Religion is worship. It is the homage of the soul for something higher than the human. It is the loftiest emotion of the mind. Nothing short of it can lift man to his greatest possibilities.

Therefore, any system which does not present some definite and conceivable object for worship fails utterly as a religion. The human mind is so constituted that it is incapable, in its present stage of development, at least, of seizing upon purely abstract ideals, and converting them directly into purpose and action. There must be some model presented for imitation. As well ask the astronomer to resolve space into planets as to ask man to resolve the principles of ethics into deeds of virtue. The keenest appreciation of abstract truth cannot be converted into noble conduct save through the medium of objective ideals. Hence the failure, or rather, the insufficiency, of all systems which are based on abstract morality.

If, then, man is robbed of the old established forms of religion, what is there to give him in return? You take from him a plain road and visible goal, and give him only blank space and empty directions.

Yet Truth must be followed whithersoever she leads. This is alike the dictate of instinct and the verdict of conscience. Will the world, then, shake off religion, as an outgrown cloak? Alarming prospect! The decadence of France is an example of what may reasonably be expected of an irreligious nation.

Chaotic as the religious thought of the day seems to be, however, it is not without its hopeful tendency. Already the mountain top is gilded with an auroral light which foretells the rising of the sun.

President William DeWitt Hyde of Bowdoin College sums up the situation in a vigorous paper on "The Reorganization of the Faith." He says,—

"The current creed of Christendom is a chaos of con-

Digitized by Google

tradictions. . . . It is high time to attack this chaos, to resolve it into its elements, and to re-organize our faith into a form which shall at the same time command the assent of honest and the devotion of earnest men. . . . We must discover the germ of life in the old and somewhat decrepit body of current tradition, and from that vital germ we must breed the fair and vigorous body of the faith that is to be."

Here is the heart of the whole subject. The disintegration of religion is not the disintegration of decay and death, but of life and regeneration. It is only the germination of the seed. It is but casting off the shell of error and superstition to spring up and blossom in some new and beautiful form.

The fact that men within the church recognize the situation and are brave enough and honest enough to face it, is in itself a wonderful advance. Only a few years ago, such a statement would have been rank heresy. Now it is received with approval and indorsement. It is half the battle when the church admits the need of the re-organization of the faith.

What will be the nature of this re-organization? Evidently the first step is to rid religion of speculative theology and human dogma, and the second to centralize it upon some great essential.

What is the essential of the Christian religion? There is but one. It is self-evident.

Professor Hyde says,—

"An effective spiritual and social movement must have a human head, a personal Lord, a real Master. Such a Lord and Master, the Christian finds in Christ. . . . The modern argument for the divinity of Christ is very simple: Love is God. Christ is our highest and completest historic expression of love. Therefore Christ is the son of God, our interpreter of the Divine, our vision of the Father."

What could be more rational and beautiful? Is not this a middle ground upon which all sects and classes may meet? Is not the time approaching when the whole religious world will unite in the simple worship of Christ? Will it not recognize Christ as the most sublime ideal the mind of man has ever conceived and be content to follow that ideal?

The future of religion may be summed up in one word: Christ. The religion of the next era will be what the religion of the present era has falsely claimed to be, the Christian religion.

The Minneapolis (Minn.) Sunday Times.

An Unreliable Witness.

A REPORTER of a yellow New York newspaper visited Lansingburgh recently, secured membership in a class in Christian Science of which Mrs. Harriet L. Betts is teacher, and he has been writing an *expose*. According to his story, he told that lady many falsehoods before he could induce her to accept him as a student. Then he wormed himself into the confidence of Mr. and Mrs. Betts, and dined with them at their residence. After having confessed himself to be a wholesale liar, and to have shamelessly violated the hospitality of his host and hostess, he proceeds to ridicule and "expose" Christian Science teachings in the most sensational style. Members of the society say that his statements are full of falsities and distortions, and only give an absurd misconception of what is really taught. Certainly a moral pervert of this character could not be expected to tell the truth, even when it would better serve his purpose, and no sensible person, whether hostile or friendly to the movement attacked, will give a particle of credence to his yarns.

The Troy (N. Y.) Press.

The unreliability of the paper in which this alleged *expose* was published has convinced fair-minded persons, who are inclined to give Christian Science the benefit of the doubt, that the attack was unjust and uncalled for.

During the past few months the attacks on the new cult have demonstrated that the faith curists are being persecuted. The fact that persons treated by Christian Scientists died seems to be the principal argument of those who are assuming the role of persecutors. There must be something in a cult which numbers its followers by the hundreds of thousands. Experiment has shown that the human organs are unconsciously affected by the mind to such an extent that remarkable cures have been recorded. Whether or not these changes are effected through spiritual intercession is another question. Those who follow the cult believe that their physical condition will be bettered through faith. There seems to be nothing remarkable in such a belief. The persons who are becoming hysterical over the subject would do well to collect their scattered wits, settle down to personal business and, on the glorious Fourth, "blow themselves" on fireworks.

Press-Knickerbocker and Albany Morning Express.

The Lectures.

At Ogden, Utah.

Judge W. G. Ewing of Chicago, delivered a lecture in the Tabernacle Monday evening, July 3, on Christian Science. A good audience heard the address.

The speaker was introduced by Mr. M. H. Lincicome, First Reader of the local church, who said,—

Thirty-three years ago down east in the state of Massachusetts, a woman met with an accident, receiving an injury from which the attending physicians said she could not recover, and she was given but a short time to live. Being of a religious turn of mind, and having great confidence in the Scriptural promises, when she was given up by her physician and her pastor had said a last farewell, she called for her Bible and requested to be left alone, which was granted. There in the quiet of her own room, alone with her Bible and God, she was healed of her hurt, arose and dressed herself, and walked out to her friends, clothed, and in her right mind. That woman was Mary Baker G. Eddy, the Discoverer and Founder of Christian Science.

As the falling apple led Newton to the discovery of the law of gravitation, so this seemingly miraculous healing of a case which neither medicine nor surgery could reach, was the event which led Mrs. Eddy to the discovery of the Principle of the Christ Healing, and the application of the rules which she has named Christian Science, and it has since been successfully applied in the healing of over a million cases. It is seven years since Christian Science was first introduced in this city, and I think I would be safe in saying that within that time there have been at least one thousand said to be incurable cases healed through the Christian Science treatment. While this has been going on, many erroneous impressions concerning Christian Science and its methods have been given out by those who know little or nothing of the true import of its teachings, and it was with the hope of correcting some of these wrong impressions as well as presenting to a thinking public a true statement of our claims for this Science that this lecture had been arranged for, and we have asked you to meet with us to-night to hear the subject discussed by one who comes to us with authority to speak for the whole cause; a member of the International Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, in Boston, Mass. It is with

Digitized by Google

great pleasure that I introduce to you Judge William G. Ewing, of Chicago, who will now address you.

Ogden Standard.

At Stillwater, Okla.

We have just had a lecture on Christian Science, and perhaps it will not be out of place for me to tell something about our failures and success in securing a lecturer. We first engaged Mr. Alfred Farlow of Kansas City. Just at the time we were preparing to arrange for the lecture he was called to Boston.

Next we wrote to Mr. Kimball of Chicago. He wrote us that he had so many unfilled engagements that he could not come. Then we corresponded with Mrs. Knott of Detroit. We engaged her through her corresponding secretary in Texas, and through a misunderstanding we were again disappointed. Then we wrote to Judge Ewing of Chicago. He said he would be along in early winter.

By this time we had begun to think we would have to write to the Board of Directors, asking them to send us a lecturer. At this juncture we noticed that Judge Clarkson of Omaha, had been added to the Board of Lectureship, so we tried again and this time we succeeded. He came and lectured for us June 19, in the Christian Church. He was introduced by Rev. Mr. Williams of said church, in a few well-chosen and most liberal remarks. We had a full house and every one seemed to be there to learn.

It might be worth while here to state our experience in securing a building. There are seven church buildings here besides our own. As we thought our building too small to accommodate the people, we concluded to try to get a larger one. We first went to the Trustees of the M. E. Church. The leading physician of the city was on the Board of Trustees of this church, so we thought we would get his consent first, then we should have no trouble with the rest. He said we were more than welcome to it as far as he was concerned, that he would help us to get it, and he thought there would be no trouble whatever. He went to the minister first, and our hopes were soon blasted. The minister said it would not do at all, for we were not orthodox, and we were only trying to tear down the churches. The doctor said he did not understand us to be that kind of people, but of course the minister knew best.

Next we tried the Presbyterians. We got the consent of the Board of Trustees and Committee without one dissenting voice. Then we went to the minister. He seemed so afraid we would get into his fold that he had us promise that we would go no further with it, and he refused to give out our notice from his pulpit.

The *Gazette,* our leading paper, spoke well of the lecture, and printed it in full. W. F. STORM.

At Howard, Kan.

Judge W. G. Ewing, lectured at Howard, Kan., Friday evening, June 23. There was a good audience, the Opera House being nearly filled. There is a little band of only six Scientists at this place; but we were able to meet the expenses of a lecture, and the good results are both seen and felt.

Judge Ewing's address was well received by the people here and the Scientists are greatly encouraged.

Judge Ewing was introduced by Prof. Frank Westfall of this place. He spoke as follows:—

Ladies and Gentlemen:—We have assembled to hear something of Christian Science, its principles and practice. Many who are here believe in this religion, and many, like myself, do not; yet we believe there is truth and good in it. This is an age of enlightenment and progress; an age of thought and investigation; an age when the spiritual and material life of man are being studied by man more than ever before; an age when Truth is being sought by men and women wherever they may find it, casting aside all the old creeds and dogmas, relics of past ages.

The Christian Scientists who are seeking to find the whole truth should be praised for their investigations, for their desire for more light, knowledge, and wisdom, and a better understanding of man and his Creator.

We have with us to-night a man of this liberal thought, a man who has held the highest position in the courts of Chicago; a man of high literary attainments, and who holds the highest of social positions. This distinguished and eloquent gentleman is Hon. W. G. Ewing whom I now have the pleasure of introducing to you.

MRS. M. E. NICHOLS.

At Joplin, Mo.

The citizens of Joplin, Mo., were favored with a lecture by Judge W. G. Ewing of Chicago, Thursday evening, June 22.

The members of the School Board, who so kindly granted us the use of the high school building, were visited by the ministers of the different denominations in the city, and presented with a remonstrance against allowing Christian Scientists to occupy even for so brief a period, their fine new building.

They had met in solemn conclave, after our notices were put out, drawn up resolutions, and signed a petition asking the School Board to rescind their decision, withdraw their permission, and refuse to fulfil their agreement; but they reckoned without their host, for they found the chairman of the Board was a man of principle, who replied, "The building was erected for educational purposes, and I have no doubt that these Christian Scientists will give us food for thought. It is only a fair business transaction between man and man, and to withdraw our permission is not right, is not principle, and though I am not a Christian Scientist myself, and never expect to be, yet I believe in fair dealing."

The lecturer was introduced by Ex-Lieutenant Governor Claycomb of Joplin. MAY R. BOLTON, Clerk.

Lectures at Other Places.

Salt Lake City, Utah.—Judge W. G. Ewing, Sunday, July 2.

Toledo, O.—Edward A. Kimball, Tuesday, May 30.

Alpena, Mich.—Mrs. Annie M. Knott, Tuesday, June 27.

Augusta, Me.—Rev. William P. McKenzie, Thursday, June 29.

Denver, Col.—Edward A. Kimball, Thursday, June 29.

The Religious Press.

THE distinctive Baptist doctrine of the separation of Church and State is in grave peril from certain tendencies that are developing in American churches and missionary societies; but those who see the peril are coming to a larger recognition of the validity of the doctrine. For example, Dr. Charles H. Parkhurst, the eminent New York Presbyterian clergyman and reformer, has recently said,—

You cannot make a man believe in God if you do not convince him you believe in Him yourself. Peter, by brandishing his sword, denied the divinity of Jesus; and any other man cheapens God when he goes about to yoke God's Spirit alongside of carnal contrivances. It is the absence of such carnal contrivances that explains the rapid extension of Christianity during the first three centuries of our own era. God worked mightily because he had no back-

Digitized by Google

ing. Up to that time armies and navies were on the side of the pagans. Christianity is never so powerful as when it is unprotected, and evangelization that depends upon soldiers and gunboats has no future. The instant Christianity begins to lean on anything, its divine vitality dries out of it. The cause of Christ prospered in the Roman Empire till it became the State religion—till it came to have the government back of it—then Christianity deteriorated into a pious kind of politics, with a good deal more politics than piety.

In contrast with these utterances we put the declarations of the Rev. Dr. Radcliffe, the moderator of the Presbyterian General Assembly, who last week said in his annual sermon:—

In the presence of these opportunities, the Church cannot be careless. We dare not refuse obedience. God calls us to subjugation. Force is the only argument known to savages from Joshua to McKinley. The earth must be subdued that it may bring forth the rose and the fruit, that it may bring forth the trees of life whose leaves are for the healing of the nations. Our national life has new impulse and dazzling ambition.—*The Watchman* (Baptist).

Settled Notions Disturbed.

Perhaps no illustration of this relativity of our consciousness can be more apt than that relating to the existence of air as a liquid. It is true, indeed, that gases in small quantities have been transformed into liquids in the chemist's laboratory, and have been shown to students in the lecture room. But it is only when the process assumes commercial proportions and air is liquefied by the gallon and made available to everybody that the masses awaken to a realization of its remarkable properties. True, it is a liquid; but it is a liquid which does not wet anything. A handkerchief soaked in it and then shaken out, is as dry as before. It may be poured into a tumbler as may any liquid, but, unlike any known liquid, it boils furiously even in the ordinary air, and in boiling produces a cold several hundred degrees below the zero of the thermometric scale.

Of itself it does not give off a vapor; but the gas resulting from its evaporation condenses to a solid the moisture in the air and so surrounds itself with an almost impenetrable mist or fog.

At such a low temperature most substances lose their characteristic properties. Iron becomes as brittle as glass, copper loses its electric resistance, soft rubber is made hard and fragile, mercury is solidified, and absolute alcohol, which is able to stand the winter's cold of the Arctic regions, is converted into a hard and dense solid like ice.

Certainly it would seem that our ordinary experiences are wofully disturbed by such a substance and our consciousness of things about us caused to suffer a very rude shock.

George F. Barker, LL.D., Professor of Physics, University of Pennsylvania, in *The Independent* (Presbyterian).

Foreign Mission Problems.

The annual report of the Woman's Baptist Foreign Mission Society of Pennsylvania for 1898 shows that for every dollar forwarded to the Woman's Baptist Foreign Missionary Society in Boston more than fifteen cents was spent for "State Expenses" in Pennsylvania. The "State Expenses" do not include the expenses of the Associational organizations. In 1898 the cost of sending one dollar from Pennsylvania to the foreign field through the Woman's Baptist Foreign Missionary Society was considerably more than twenty-eight cents. The cost of sending one dollar to the foreign field through the treasury of the American Baptist Missionary Union in the same year was less than eight cents. That is, it cost considerably above twenty cents more to send one dollar to the foreign field through the machinery of the Woman's Society than to send the same amount through the treasury of the Missionary Union.

Mary Clark Barnes in *The Watchman* (Baptist).

Higher Sense of Prayer.

There is no way of making one's prayers real and strenuous save as God is made real and present in one's thoughts. It is impossible to speak with any sense of reality to an absent deity, or to put soul and passion, faith and love, into words that are spoken into empty space; and we can never know what Jesus meant by prayer, nor what prayer meant to him, until we have bathed our spirits in his rich and satisfying thought of God. Once let that thought take possession of us, and prayer is lifted forever above the mere realm of petition, and all doubt or misgiving as to its answer is lost in the higher wish, not that our particular requests shall be granted, but that the will of God may be known and done.

Rev F. W. Baldwin, D.D., in *The Congregationalist.*

Creed of Stevenson.

The following, which may be termed the creed of Robert Louis Stevenson, is a creed that does not declare Christ, but contains the spirit of Christ's teaching:—

To be honest; to be kind; to earn a little and spend a little less; to make, upon the whole, a family happier for his presence; to renounce when that shall be necessary, and not be embittered; to keep a few friends, but these without capitulation; above all, on the same grim condition, to keep friends with himself: here is a task for all that a man has of fortitude and delicacy.—*The Outlook.*

A Chapter on Medical Legislation.

BY ROBERT L. ZILLER.

Texas has added another chapter to the history of unsuccessful attempts at monopolistic medical legislation. Before the Legislature assembled in January, printed copies of a proposed medical bill were sent to the members through the mails, with the request that they give their support to this or a similar bill. The wording of the following quotation, which is taken from a printed note attached to said bill, plainly shows that there was a general understanding in the several states as to what course should be pursued in the Legislature regarding medical legislation. "Note:—This is a copy of a bill prepared by the Illinois State Board of Health to submit to their legislature for adoption. Its provisions are ample and simplify the business," etc. One of the "ample provisions" reads in part as follows: "Sec. 9. That any person shall be regarded as practising medicine within the meaning of this act who shall operate for or upon, prescribe for, or otherwise treat, or profess to heal or cure any physical or mental ailment or any physical injury to or deformity of another," etc. The bill, however, was not formally introduced, and while another and more drastic measure was being prepared, the time was used to the best advantage by bringing Christian Science to the attention of the members, both by reading matter and by personal effort. Soon another bill made its appearance, and was formally introduced and referred to a committee. This bill was known as H. B. No. 627, and a more vicious bill could scarcely have been framed. A part of the most objectionable section reads as follows: "Any person shall be regarded as practising medicine or surgery within the mean-

Digitized by Google

ing of this act who shall use the words or letters 'Dr.' or 'Doctor,' 'Professor,' 'M. D.,' or 'M. B.' in connection with his or her name, or any other title intending to imply or designate him or her as a practitioner of medicine or surgery in any of its branches, and who in connection with such title or titles, or without the use of such titles, shall prescribe, direct, recommend, advise, apply, give, or sell, for the use of any person or persons, any drug or medicines, or any other agency or application for the treatment, cure, or relief of disease, and it is further provided that the use of any of the aforesaid titles, or the exposure of a sign, circular, advertisement, or any other device or information, indicating thereby the occupation of the person or persons shall be considered *prima facie* evidence, and it is further provided that the provisions of this act shall apply to all persons professing or attempting to cure disease by means of the so-called systems of 'faith-curism,' 'mind-reading,' 'laying-on-of-hands,' and other similar systems," etc. A strong pressure was brought to bear on the committee to secure their approval of the bill, and while there was some opposition from the so-called "irregular" practitioners on the outside, the fact that at least four members of the committee were M. D.s made the outcome seem rather uncertain. But the committee delayed action for a few days, and I was told that I need give myself no further concern.

However, that was not to be the end of the matter. On going to the Capitol, and on nearing the entrance to the House of Representatives, I noticed that quite a number of physicians were present, both outside and inside. It immediately flashed upon me that something was up, and on finding several members of the committee I learned that such a cry had been raised on account of the bill being laid aside without giving all the doctors a formal hearing, that the committee felt compelled to reconsider their former action. A meeting was to be held that very night, at which time the representatives of the state medical association, as well as representatives of the various schools of medicine were to be present and express their views. There was no time to telegraph for any of the brethren to come, nor could the time for the hearing be changed. When the hour arrived the procession of doctors filed into the room, and when I noticed that of those on the committee who were positively opposed to the bill, only one was present, it seemed for a moment that an ominous cloud was lowering. When all were seated, the reading of the bill in sections began, and various expressions of approval were heard as the reading progressed. I decided to say nothing until the objectionable section was reached. When it was reached there was a pause, during which time several were noticed in earnest conversation. Then the doctor who was reading the bill began again, and said, "We have decided to make a change in this section of the bill. We do not believe that there is any chance to pass the bill as it stands. There seems to be such opposition from *somewhere* that to leave it as it was framed would defeat the entire bill. If people want magnetic healers, vitapathic doctors, or Christian Science treatment let them have it, and let them pay for it. We have decided to insert this amendment: 'Provided, that the provisions of this act shall not apply to persons professing or attempting to cure disease without the use of drugs or surgical appliances.'" After some further talk on matters pertaining to the practice of medicine, vivisection, etc., the meeting came to an end. Before the committee made its report other medical bills came before it, and finally a bill was gotten up by the committee, known as S. H. B. Nos. 358. 453. 627, and this, containing the above amendment, was reported favorably.

Soon a lecturer came to this state, and while it was held desirable to have a lecture, the way did not seem clear. One morning a telegram came, offering a lecture in the Capital City if arrangements could be made. The legislators had been prepared by the previous distribution of lectures, and the thought came that the proper thing to do would be to have it in the great granite Capitol, the most magnificent building of its kind in the Union. In talking with some of the members about the matter all expressed a desire to hear a lecture, and were not opposed to giving the House of Representatives for that purpose. However, the general sentiment of the Legislature was against permitting the Hall to be used for outside purposes, and as so distinguished a gentleman as the Hon. Wm. J. Bryan obtained the use of the Hall only by a great effort on the part of his friends, it was considered almost impossible to get it. But within two hours from the time the telegram was received all arrangements had been made, and a resolution offering the House of Representatives for a lecture to be given to the "Members of the Legislature, the State Officials, the Press, and the people of Texas in general" was carried by acclamation. The lecturer (Mrs. Knott) was introduced by the speaker of the House in a very appropriate address, and much interest was manifested in the subject. This was indeed a fitting finale to attempts at tyrannical medical legislation, and it is noteworthy that these events took place on the eve of the celebration of San Jacinto, the day of Texan independence. The bill as reported by the committee was never brought to a final vote in the House, and a similar bill reported favorably by a Senate committee met the same fate in that body.

Many kind expressions were heard in the Legislature. One physician remarked: "When I see a people near enough to the Almighty to heal the sick by their prayers, I would be willing to kneel in the dust of the street with them in humble petition to the omnipotent Creator." This same physician also remarked that after reading the literature he had received, he mailed it to others, in order that they too might read it.

Many pleasant hours were spent with members of the Legislature; many were the kind words uttered with genuine good will, and on the day of adjournment I felt that the months spent in the work with the Legislature had been abundantly blessed by our heavenly Father.

Inasmuch as there is considerable discussion at present as to the legal aspect of Christian Science, and the rights of its practitioners, it may be well to give the expressions of several legislators, made with reference to the proposed bill (before the amendment was introduced) and to tyrannical medical legislation in general.

Hon. Geo. W. Savage (minister) expressed himself as follows: "I believe in upholding individual rights to the fullest extent. Every man has the right to choose his own method of healing, as well as his religion. The state has no right to interfere in such matters. Any law that would deprive a man of his right of choice in such matters would be in violation of the Constitution. I am opposed to such laws, and while we may differ on points of theology, I stand ready to defend your rights as I would my own, wherever I may be. The few Christian Scientists that I have met have given me the impression that you are true American citizens."

Said Hon. Arthur C. Tomkins, (attorney at law): "Christian Scientists have as much right to practise as any one else. I do not see any proof for the claim that medicine is a science. It is every one's constitutional right to employ such means for gaining health as he may see proper, and I do not believe in enacting laws that would interfere with this right."

Hon. F. B. Looney, M. D., expressed himself very forcibly as being opposed to restrictive medical laws in

Digitized by Google

general. (Dr. Looney is an allopathic graduate, and during the Civil War was Assistant Surgeon in the 27th Tenn. regiment, and later Assistant Surgeon in the 2nd Ark. cavalry until the close of the war.) He said: "You may say for me that I think the proposed medical bill, or either of the bills, would be a great imposition. The people don't want these bills. I remember some years ago how the allopaths fought the homœopaths. Their methods are direct opposites, and they would not even join in consultation. Now they are quite ready to lay aside their prejudices and unite in making war on a new school. There should be no monopoly in this thing, and I am opposed to such class legislation. I believe the laws on this subject as they now stand are sufficient. If I am sick, and do not wish to rely on your method of treatment, that is no reason why others should not. People have sense enough to know who they want to treat them without having any class of people dictate to them. Furthermore it would be a violation of their rights, and I will oppose such bills whenever they may make their appearance."

In addition to the above, the proposed medical bill was submitted to competent lawyers outside of the Legislature, and they were asked for brief legal opinions, especially on the section quoted from H. B. No. 627 The questions involved in general terms the following points: (1) Its applicability to Christian Science practice; (2) the probability of its finding a place on our statute books or standing the test of judicial decision, and (3) its constitutionality. The following extracts are given from opinions rendered:—

"Above bill would attempt to affix a penalty for obeying the positive injunction, or command, of Christ; would place a tax upon even an effort to be a Christian, or to lead a Christian life. To add that such a measure would be unconstitutional would be surplusage; that deduction seems self-evident. Therefore it could not stand the test of judicial decision. It is but fair to add that it is a credit to the intelligence of the Legislature of the State of Texas that the effort to pass the bill was a failure."

E. B. HANCOCK, Atty. at Law.

"In my opinion the proposed law before our enlightened courts would not stand a minute, but would be held unconstitutional. To the question as to the probability of its finding a place on our statute books, I will say No,—not even a temporary place The time for the passage of such laws in Texas has passed, and we are taking no backward steps."—H. M. LITTLE, Atty. at Law.

"In reply to your questions concerning the enclosed section of H. B. No. 627, I beg to give you my opinion as follows: The section set forth in your communication undoubtedly would place a restriction on the practice of Christian Science, and attempt to control the religious liberties of those who have taken up the teaching, and follow the practice, of Christian Science. However artfully any bill may be framed which in any way tends to control, or interfere with, any religious faith, it would be in direct conflict with the Constitution of the United States and every state in the Union. Both the constitutions of the United States and the State of Texas guarantee the indefeasible right to all persons to worship Almighty God according to the dictates of their own consciences. No human authority ought in any case whatever to control, or interfere with, the rights of conscience in matters of religion, etc. Now from this section of the Constitution it is very clear that no legislative enactment concerning the rights of any class of people, of whatever religious faith, could be otherwise than in direct contravention of the constitutional provisions. Having carefully examined the text-book of Christian Science, 'Science and Health with Key to the Scriptures,' by Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, I find that healing the sick is as much a part of the religion as reforming the sinner. Therefore it is my opinion that no legislative enactment of the kind in any of the states or territories of this Union could stand the test of judicial decision, but would be declared unconstitutional."

WM. BRUEGGERHOFF, Atty. at Law.

It gives me pleasure to be able to quote the following from Hon. C. W. Raines. (Besides being a thorough student of the law, Judge Raines is a member of the Texas Historical Society, and also of the Texas Academy of Science. Among the valuable contributions which he has made to our literature may be mentioned, "The Life of Santa Ana," "Bibliography of Texas," "Enduring Laws of the Republic," etc.) He writes as follows: "To answer your question, I will briefly notice in order the only parts of the bill that could possibly apply to Christian Science practice. The first is the expression 'or any other agency' (which follows closely the mention of drugs and medicines) 'for the treatment, cure, or relief of disease.' This expression is broad enough to include every kind of medical treatment, but it evidently refers to other material remedies, such, perhaps, as hygiene, dietetics, exercise. And this opinion I think conclusive from the fact that further along the bill specially alludes to remedies of a different nature in these words: 'the so-called systems of faith-curism, mind-reading, laying-on-of-hands, and other similar systems.' Whether or not this last clause applies to the metaphysical practice of Christian Science, I will now consider. Mrs. Eddy, the author of the Christian Science text-book 'Science and Health with Key to the Scriptures,' denies that Christian Science practice is identical with the so-called systems of faith-curism, mind-reading, laying-on-of-hands, or that it could be justly classed as a similar system with those delusive errors. Christian Science practice as held by its adherents is no mere theory, but is based on a demonstrable Principle of metaphysical healing, with no points in common with the so-called systems mentioned in the bill. Should the courts, however, hold otherwise, a direct issue could then be made as to the constitutionality of the bill. The Constitution plainly guarantees the rights of conscience in matters of religion, and it would only be necessary for Christian Scientists to show that their metaphysical healing is a vital part or substance of their religion to invoke the protection of the Constitution. This can be readily proven from the text-book of Christian Science, which declares that preaching and healing are inseparably connected as commands of Jesus, and that sin and sickness are to be dealt with by precisely the same remedies. If the provision of this bill be held by the courts to inhibit Christian Science practice, or metaphysical healing,—an essential part of the religion of Christian Scientists,—then it would be repugnant to section 6, article 1 of the Constitution, which reads thus: 'All men have a natural and indefeasible right to worship Almighty God according to the dictates of their own consciences. . . . No human authority ought in any case whatever to control, or interfere with, the rights of conscience in matters of religion.' This means, of course, that the bill would be held unconstitutional, as no law would be held valid that interfered with the rights of conscience in matters of religion. So, if Christian Science practice invokes the rights of conscience in matters of religion, as it surely does, it can confidently rely upon the protection of the Constitution as the last resort."

In conclusion I will say that ten competent lawyers, who were made acquainted with the fundamental teachings of Christian Science, as laid down in Science and Health, stated as their conscientious conviction that no law having for its purpose the suppression of Christian

Digitized by Google

Science practice could find an abiding place on our statute books under the Constitution of the United States as it now stands, and one well-known judge who sat talking of the grand teaching of Christian Science till the midnight hour was near, remarked with much earnestness that the Bible, and Science and Health were the best guides for daily life he had ever found.

The Communion and Annual Meeting.

BY ANNIE M. KNOTT.

Now that we are again at work, the inspired and refreshed thought goes back to the recent events in Boston which mark an important epoch in our history.

The solemn and grand communion lifted thought above the merely material and symbolic worship of our earlier days, and showed us that joy is eternal and springs up perennially by the breath of spirit.

On Tuesday there was no questioning, but a glad sense of hope that all we needed would bless the day.

Words are vain in speaking of the thrill which we felt as our brave and tender Leader stepped upon the platform. Those of us who have been privileged to see her occasionally, forgot even our own gladness in the joy for the dear students who had come so far, cherishing this fond hope, and who were to go home enriched beyond measure with the blessings poured out.

How proud we were of that stately and yet graceful woman, with her strongly marked individuality expressed by voice, manner, and poise. Our hearts said, "She is ours!" and yet she belongs to all humanity by ceaseless service.

The older workers could not well help being reminiscent, and thought turned backward to the time when the National Christian Scientist Association was called to Boston by our dear Leader in April, 1887—and how we were so richly repaid for our response to her call by the never-to-be-forgotten address which she gave us at the meeting.

By way of illustration, when urging upon us the necessity for daily prayer, she spoke of the pioneer in a new country who made a little clearing in the woods wherein to build a place of shelter for himself and family, and then, after a time, there came, perhaps on the same spot, a better home, and after a lapse of years, a stately mansion in the midst of a beautiful city.

This was to show us how our ideals of prayer were to unfold and progress through spiritual understanding.

Our recent gathering was most truly a fulfilment of the words spoken then, and the whole experience recalls some lines from a little poem, entitled "On the Mount:"—

> **Yet hath one such uplifted hour**
> **Upon the soul redeeming power:**
> **And in its light through after days,**
> **We travel our appointed ways.**
> **And all the lovely vale grows bright,**
> **Transfigured with remembered light;**
> **While in untiring souls we bear,**
> **The freshness of the upper air.**

Truly, the branches are "rejuvenated," and weary hearts are made glad and light, and who can tell what more awaits,—but we can at least be making ready for the outpouring, for all the signs show clearly that the reign of righteousness has begun within and without, and St. John's words have intense significance at this hour: "He that believeth on the Son of God hath the witness in himself."

Miscellany.

Here is a Truthful Doctor.

Editor Evening Journal:—I see with much pleasure the just and needed editorial to-day on "Death in Unknown Remedies," and since the Christian Scientist is being well peppered, the drugs advertised as "cure-alls" should be relegated to the rear of the at least harmless "Christian Science," which, however, has neither science nor sense. "Thousands are slaughtered in the quiet sick-room," said the famous "Regular" Dr. Franke, while Sir Astley Cooper told his class that "The medical profession as a whole is founded on conjecture and improved by murder."

Scan how many are needlessly slaughtered by operations for appendicitis, etc.; still, the lesser customs, like the poorer classes, must be persecuted and unjustly arraigned, while the wealthy snobs and elite poisoners are lauded to the pinnacle of fame, and poor, normal nature and her health laws are ignored, and we are a nation of medical and healing quacks. SIMON M. LANDIS, M.D.

Boston, Mass., May 13, 1899.

New York Evening Journal.

In a recent sermon on the subject of "Wealth," Dr. Hale said in part:—

"All the real teachings of the Bible point towards wealth of one kind or another as a reward for Christian living. Ministers for years past have contradicted themselves on this point—for instance, in using as examples to struggling young men such cases as that of Dick Whittington, who crowned his career as lord mayor of London. But the money must be spent wisely and well in moral ways, for the coming century is to be a 'reign of God,' when we each and all shall strive to dispel the sorrows from our minds, the darkness from our eyes; we shall take up the burdens of those less fortunate than ourselves, and treat the exile, the leper, the stranger within our gates as we do our brother, our neighbor, or our friend."

Boston Evening Transcript.

I can have no conception of God other than as the All-good, the All-wise, and the All-Father or the Father of All. I cannot bring myself to believe that there is any governing force that is in any sense final but the thing known as love, and I believe that there is no better statement than that God is love, and that He has the fullest and completest love for all His children. In short, I believe in the fatherhood of God and the brotherhood of all men, and from this relation I bar none—pagan, heathen, Jew or Gentile, black or white or yellow. Brotherhood is, and the mere matter of whether we believe or disbelieve it does not change the fact in the slightest.—[Extract from an address by S. M. Jones, Mayor of Toledo, O., at the commencement of Iowa College.] *Nebraska State Journal.*

The *Christian Register* says, "The Fatherhood of God is received by all Christians as an article of faith, but with a difference. To some he is the Father of the elect, to others the Father of the righteous, to others the Father of Christians. To a few only is he held without reservation to be God and Father of all men."

The *Advance* says: "One of the strongest proofs of the essential and unique inspiration of the Bible is that in spite of the attacks of its enemies and the imperfect theories of its friends the Book of Books survives and shows no signs of impairment or failing strength."

The *Watchman* says: "We are against Christian Science and most of its works, as we understand them, but we do not propose to abandon the doctrine of civil and religious liberty in order to fight any one, no matter how much we are opposed to his principles or his practice."

Questions and Answers.

Does not the teaching that evil is unreal, encourage mortal man in the indulgence of sin?—One in Doubt.

Inasmuch as mortal man sins, he does so because he believes that sin is real and confers pleasure. He is not influenced by the teaching that evil is unreal, but by the belief that it is real, hence the doctrine of the unreality of evil can in no sense be held responsible for his sin.

It is not possible for mortal man to sin and then escape punishment by saying, "I have done nothing, because evil is unreal." The Divine law, "Whatsoever a man soweth, that shall he also reap," cannot be annulled. The discord and suffering that follows the indulgence of sin is just as real as the sin, and there is no way in which it can be made less real. Sin is a debt of the sinner's own contracting, and no one but himself can pay it.

If mortal man were fully convinced that sin will always bring more suffering than pleasure, he would not sin. But because he is not thus convinced and thinks it is possible for him to sin and escape punishment by obtaining forgiveness, he gives himself up to the indulgence of a false sense of pleasure.

On the other hand, would man indulge evil if he really understood it to be unreal? Having this understanding what possible motive could he have for sinning?

The teaching of the unreality of evil is based upon the Scriptural declaration, "All things were made by him; and without him was not anything made that was made." If this statement is accepted as truth, the only logical conclusion that can be reached is, that that which God did not create has no real existence and is only an illusion. The application of this thought is to-day healing sickness and sin. To say that it produces the very thing it destroys is a grave mistake.

The unreality of evil can be demonstrated only as one gains the understanding of the allness of Good. Christian Scientists are gaining this understanding and it saves them from the desire to sin, thus proving that it does not encourage one in the indulgence of sin.

***

If one knows that he has wronged another, should he go to that one and confess his fault, or should he remain silent and try to demonstrate over it?—A student.

How would he have another treat him under similar circumstances? The Golden Rule is a safe guide to conduct. The Scriptures admonish us to confess our faults "one to another, and pray one for another." One of the hardest things for mortal man to do is to confess his faults—acknowledge he is in the wrong; and yet there is nothing more necessary for his salvation from error. "He that covereth his sins shall not prosper: but whoso confesseth and forsaketh them shall have mercy."

If one loves his neighbor as himself, he will try to save his neighbor as well as himself. If he knows that another is suffering because of some word or act of his, done ignorantly or intentionally, love will prompt him to do what he can to save that one from suffering. It requires self-denial and humility to go to another and acknowledge a fault and ask forgiveness. If one finds he is not received, he at least has the assurance of having done what he could.

If he is received in the spirit in which he goes, he finds that his offended brother is as willing to forgive as he is to be forgiven. The joy of forgiving a repentant brother destroys the sense of having been wronged, and the consciousness of having done one's duty, thus proving himself a man, atones for all the self-denial that was necessary. Thus in a few minutes is accomplished the destruction of a claim of error that might have troubled the thought of both for days, and even weeks, before it could have been silenced.

Reply to a Question.

In reply to a question which comes to us from St. Augustine, Florida, we republish below the following extract from "Pulpit and Press" by the Rev. Mary Baker G. Eddy, page 9.

"This book [Science and Health with Key to the Scriptures], in 1895, is in its ninety-first edition of one thousand copies. It is in the public libraries of the principal cities, colleges, and Universities of America; also the same in Great Britain, France, Germany, Russia, Italy, Greece, Japan, India, and China, in the Oxford University, and the Victoria Institute, England; in the Academy of Greece, and the Vatican at Rome."

A Letter to a Friend.

Cedar Rapids, Iowa.

My Dear Friend:—As you know, I had a claim of Locomotor Ataxia of three years' standing, and in seeking health I made a trip to Europe, then spent a winter in North Carolina, then two months in a hospital in St. Paul, and always under medical or electric treatment, with no permanent benefit.

In the spring of 1898 I tried Osteopathy two months with only slight temporary benefit. In June following, my wife suggested that I try Christian Science as a last resort, and urged me to call on a local demonstrator here. Neither of us knew anything about Christian Science, and having no faith in it, I asked to be shown some one who had been healed of such a disease as mine. I was given the name of a Chicago gentleman, and I started that night for Chicago to see him. During the next day, before I had an opportunity to see the gentleman, I met a friend, who, on making inquiry as to my health, mentioned the fact that a friend of his had been healed in Christian Science of a disease of exactly the same nature as mine.

This struck me as being a better subject for me to see, so I immediately called on him and spent the evening with him and his wife, when they gave me a history of his case and the healing.

We had been under the same doctor in Chicago, and, strange to say, this same doctor who sent me to St. Luke's Hospital to lie on my back under absolute rest for two months, had hung the other fellow up by the neck every day from an apparatus suspended from the ceiling. I put the various tests to this man, and left his house that night convinced that I could be cured. So I came to my healer July 1, under the following string of beliefs:—

Paralysis, gastritis, fugitive pains in my legs, partial loss of eyesight, loss of equilibrium and consequent difficulty in walking, constant daily artificial means with bowels and distress from kidneys.

With the above string and the positive assurance from the best-known doctors in the land that I could never be cured, I turned to Christian Science.

The demonstrations were rapid, and after the third treatment I walked six blocks in perfect balance. I have not used any medicine or material means, nor have I worn glasses, since I took my first treatment, and I have experienced no inconvenience, except from a vicious belief of cough which seemed to cling to me, but now I am glad to say it has become nothing. I had coughed steadily for four years, but on Sunday, December 4, I sang a solo at our church service here, thus annihilating the last of my old claims and offering that as a public testimonial to Christian Science.

Digitized by Google

Now I have written you much of the physical healing, but it is not a tithe of the spiritual healing. The teaching of Christian Science and its daily practice has brought me health, and joy, and rest.

You knew something of my old life, but it is quite different now. My daily journeys seem short with Science and Health in hand, and my home-coming is an entrance to an atmosphere of love and security. My wife has also accepted Christian Science, and when you visit our city again, I want to show you a happy home. You know we were members of the Roman Church. Sincerely yours in Truth, *F. W. Gibbons.*

A Summer Service.

Lake Minnetonka, Minn.

Dear Sentinel:—Here at our summer home we are in the midst of a thickly settled country of small farms and market gardens, and three miles from the churches in the village of Excelsior. During the eighteen summers we have spent among them, our neighbors have become friends, and occasionally an afternoon Sunday service has been held in the open air. We felt the need of a Sunday service in the neighborhood, but the interest was not sufficient to establish anything permanent. Two years ago this spring, having had the help of the Christian Science service since the organization, the January before, of Second Church of Christ, Scientist, Minneapolis, Minn., my daughter and I decided to read the lessons in the *Christian Science Quarterly* every Sunday morning, at home. Some one suggested inviting the neighbors and we did so. The third woman to whom I went, was not a Christian Scientist, but asked me most earnestly to have the service in the schoolhouse, saying she would herself obtain permission from the trustees to use the schoolhouse for the purpose.

The people had known nothing of Christian Science, but they liked the service and continued to come during the summer. Two months of this time I was away, but our older son took my place, and with his sister, read the full Christian Science service every Sunday. I came back to find the human thought of prejudice had started an opposition service, in the form of a Sunday School, using the schoolhouse an hour before we met. I went to see them at once. They received me kindly but the feeling against the use of Science and Health was intense. The wife said to me, "When I see cursing, swearing infidels attending that service Sunday after Sunday, and saying they see no harm in *that book,* then I don't want anything to do with it." The husband seemed particularly agitated over the spiritual interpretation of the Lord's Prayer, and shaking both head and forefinger at me said, "We want nothing but the words of Jesus." The "cursing, swearing infidels," of whom we had not known before, decided the question of continuing the service the next summer. This spring the friends again asked for the service, and now, with the First and Second Readers permanent residents, a Christian Science service is established at Lake Minnetonka, "To give light to them that sit in darkness, . . . to guide our feet into the way of peace."

Love has done all the work. The first summer the collections bought our hymnals, a dozen and a half, and a half dozen were given us by a friend. Last summer the collections were for a cabinet organ, which was bought at the close of the summer and left in the schoolhouse for the use of the schoolchildren.

I have sent this experience, thinking others might find in it a suggestion for the long summer vacation away from their helpful service in the city. With this simple service of Love, has not Christian Science solved the much discussed religious question: The Problem of the Country?

ADDIE KEITH MERRILL.

The Carol of the Rain.

BY KEYES BECKER.

O THE happy summer rain! O the merry summer rain!
How it dashes and it splashes o'er my southern window-pane
With its sweet persistent voice
On its way to make rejoice
Every leaf of anxious clover, every blade of thirsty grain!

O the rolic, summer rain! O the frolic, summer rain!
Here you are with us a moment, then you're up and off again!
Other fields expectant lie,
Dull and dusty, hard and dry,
Glad to have you spoil their burdens, for you do it without pain.

There is something all may gain from thy visit, Summer Rain—
Something with Love's cadence whispered in thy carol sweet and plain:
"He who knows true liberty
Helps his neighbor to be free:
E'en the cup of water is not given the needy one in vain."

Amended By-Laws.

Section 6 of Article IV. of the By-Laws of The First Church of Christ, Scientist, in Boston, Mass., has been amended so as to read as follows:—

"Members of the Mother Church who are, or may be appointed, readers to conduct public services, should be thorough English scholars, and must be sufficiently such as to read and spell well."

Section 5 of Article I. has been amended so as to read as follows:—

"No Board of Trustees nor syndicates shall ever be formed by, or between, the members of this Church, or shall exist in the Mother Church, except the Trusteeship be constituted by the Pastor Emeritus."

Section 4 of Article XXII. has been amended so as to read as follows:—

"If a member shall communicate to the Pastor Emeritus aught that is injurious to the character of another member, or trouble her on subjects belonging to our periodicals without her consent, it shall render him liable to Church discipline."

New By-Laws.

The following new By-Laws have been recently adopted:

"It shall be the duty of every member of the Mother Church, who is a First Reader in a Church of Christ, Scientist, to enforce the Church discipline and By-Laws of the Church over which he presides."

"It shall be the privilege and duty of every member of this Church who can afford it, to subscribe for the periodicals that are the organs of this Church; and it shall be the duty of this Church to see that these periodicals are ably edited and kept abreast of the times."

Notice.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is pulished separately in pamphlet form. A copy of this list is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5 75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 134 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Boston, Mass.

Published by the Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of the First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada. No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

THE MOTHER CHURCH. BY JOSEPH ARMSTRONG. A History of the Building of the Mother Church, the First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address, $1.75; 50 copies to one address, $3.00.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., JULY 27, 1899. **Vol. 1 No. 48**

Work of the Church.

A Correspondent on the Defects of Modern Preaching.

THE following is an extract from an article by Professor Robert Morris Rabb, Master in Theology of the University of Chicago, recently published in *The Inter Ocean.*

After all has been said on both sides we really need religion. Confronted by life's exacting trials, bearing a nature easily moved to wrong, sensible of our own shortcomings and sins, confronted by a death of uncertain date, and by the facts of immortality and a future judgment, which cannot be ruled out of a divine government—yes, standing hourly before a God whose approval is better than life and whose disapproval is more bitter than death —after all has been said on both sides, there are serious facts which no man can afford to pass unconsidered, facts that touch the centre of his own life.

✙

No one is more sensible of the fact that the body of Christians is largely blind to their place and service in the world than the writer. This is to be confessed with shame. Much is said about the neglect of the masses by the church, and there is room for criticism on this point. The truth is, there is no class, rich or poor, with which the church, as a whole, is faithfully dealing. The poor man is often deeply incensed at the manner in which "hypocrites," as he chooses to call Christians, treat him, but he should bear in mind the fact that the rich are, as a body, quite as spiritually destitute as the poor. It is always harder to deal with a rich man in the name of Christ than with a poor man. The difference is, the rich man has more expedients to which he resorts for comfort in the present life than the poor man, and seems to bear the absence of religion with greater ease than the poor man, yet both die alike and go to the bar of God alike.

No doubt the non-Christian reader wonders why the church is not more powerful. It may be more powerful than he imagines. Still that is a question that continually thrusts itself on us, and some are moved to shame and confusion by it, while others are moved to laughter. Let us consider some facts.

Four great elements enter into a vigorous religious life: 1. Distinctiveness of teaching and conviction in consequence of it. 2. A religious experience, which means our fellowship with God. 3. A true, godly life. 4. An efficient ministry. There may be some other great elements, not included in these four, but, undoubtedly, these four are essential. There can be no powerful, truly useful, church life without them. And the church to-day can lay claim to no one of the four. That sounds like an attack; it is not. The writer is simply looking at the facts. The world can take no comfort from these facts; for if a man loses his own soul, he certainly cannot expect much comfort from laughing at people who might have helped him to God. The world in its sins is in no condition to laugh at the mass of "Christians" in the same plight.

✙

The church to-day is not distinct in its teaching. Creeds there are, and denominations there are; but that thoroughly practical, gospel teaching which has always blessed humanity, where it was enjoyed, is largely lacking to-day. Have preachers turned into cowards? The writer knows a large number of preachers, and he is prepared to say that he knows no class of men who are slower to do their true work than preachers at this very hour. They simply will not preach a clean, clear-cut gospel, just as it is written in the Bible; they simply will not present the positive ethics of the gospel of Christ. Why not? Are they afraid to do so? In many cases they are. They know that it means suffering, and suffering is the thing from which most mortals shrink. But multitudes of ministers are all mixed in their thoughts as to what they ought to preach. Have they not the Bible? Is there not enough there? Certainly, but these men are not quite clear on some points of the Bible; they are in doubt as to whether they ought to preach the doctrines of the Bible. Who could have guessed that so many weak men could get into the ministry? Is there a hell? Then why not say so? Is there a heaven? Then why keep it half a secret? Is there a Christ who died for men? Then why not preach him? It has come to such a pass that you can hardly get the great truths of the gospel from the pulpit. The people must be filled with the husks of "sociology" and modern, godless "ethics."

✙

But is there not some hope that the church will soon pass out of this? There are men who would not bate one jot or tittle from the truth; who would rather work and die in secret than win a cheap popularity by word trickery and so-called liberalism. This is always a ground for hope in the church. There is, however, little ground for hope from directions where hope should arise. This is especially true of our great schools. There is nothing more disappointing to evangelical religion than its great schools. The fearful stress which has fallen on the Congregational, Presbyterian, and, in part, Baptist, denominations during the past ten years has proceeded largely from the great schools fostered by these denominations. To outsiders it has seemed that the influence of these schools, in so far as

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

it has affected the vigor of the activity of the denominations, has been for their good; but to those who know the truth, such is not the case. The very foundations of religious teaching are being undermined by teachers in our great schools, just as they have been in a large sense in the German universities. What is known as "higher criticism" is simply working havoc with the rising minority in the three named denominations. There is no school on the American continent where a young man can go and learn the Bible as a whole under the direction of deeply pious and thoroughly learned teachers. There are schools where a young man fitting for the ministry can go and spend three years and have himself stuffed with speculative philosophy under the name of theology, and with infidelity under the name of "higher criticism." This is a positive and a burning shame. The writer cherishes the hope that some pious man or woman of means will found a school in this country (why not in Chicago?) where men can be trained who will not only know the Bible from first to last, but preach it from first to last. That would be something new under the sun.

It is not necessary to speak of the other three elements mentioned above.

There is, in the judgment of the writer, the prospect of a split in the leading evangelical denominations in our country. Men and women who believe the Bible to be a supernaturally inspired book (if it isn't, what is it worth?) will find it less and less congenial to remain in fellowship with those who deny it; and the households must break up. Higher criticism and conservatism cannot long live under the same roof. The deeply religious Presbyterian, the deeply religious Congregationalist, the deeply religious Baptist will see eye to eye, and come together and work for suffering humanity with deeper zeal and devotion than ever before, and leave their exceptionally learned brethren who butcher the Bible for pastime while humanity is bearing its sad heart in darkness, to the high delights of speculative nonsense, and semi-sceptical "investigations" and "results." Will those who desire to serve mankind in the spirit of Christ form one body? Why not, if they take the Bible alone as a guide? One thing is clear to the mind of the writer: We are coming close to great religious transformations, and we cannot doubt that God's hand will manifest itself on behalf of those who love Him and His word and His creation, man.

Items of Interest.

The President has made public the following message, which he sent to General Otis:—

The President desires to express in the most public manner his appreciation of the lofty patriotism shown by the volunteers and regulars of the 8th army corps in performing willing service through severe campaigns and battles against the insurgents of Luzon, when, under the terms of their enlistment, they would have been entitled to discharge upon the ratification of the treaty of peace with Spain.

This action on their part was noble and heroic. It will stand forth as an example of the self-sacrifice and public consecration which have ever characterized the American soldier.

In recognition thereof I shall recommend to Congress that a special medal of honor be given to the officers and soldiers of the 8th army corps, who performed this great duty voluntarily and enthusiastically for their country.

Governor-General Brooke will issue a decree allowing Cubans who during the insurrection here became American citizens, to regain their Cuban citizenship by registering in Havana or the cities in which they live. The news that such a decree would be issued has had a very good effect on the independent Cubans, who consider it an indication that the independence of the island will be recognized within a short time. Very few Cuban-Americans will take advantage of the decree. A majority of them express the desire to retain their American citizenship, especially those who hold property.

The correspondents of American newspapers claim that the strict censorship of press despatches from Manila has prevented them from cabling to the United States anything that did not express official views of important events and conditions. The correspondents recently had two long interviews with General Otis and requested permission to cable to their respective papers all facts and the different phases of events as they transpired. General Otis finally promised greater liberality, agreeing to pass all matter that he might consider not detrimental to the interests of the United States.

Mr. Holls of the American delegation to the Peace Conference, with a view of adding a useful recourse to the arbitration court, has proposed an amendment to the effect that the court shall be empowered, with the consent of both parties, to order an international commission of inquiry whenever the circumstances seem to warrant it. It is understood that the amendment will receive the support of Great Britain, Germany, and some other powers.

The State Supreme Court of Colorado has decided that the eight-hour law is unconstitutional. The principal objection to the new law was that it was an infringement of individual rights. The enforcement of the law was the cause of the great smelter strike. It is believed that the decision settles the strike, as the men can now return to work under the old order of things, with such compensation and hours of labor as they see fit.

General Funston is reported to have said that more diplomacy and less powder should be used in the Philippines. He declares he is almost a peace-at-any-price man. While he is a Republican he is an anti-expansionist, though not an ardent one. He believes that big syndicates and capitalists will be benefited by the retention of the islands, but labor is so cheap there is no inducement for the American laborer.

Consul-General Rose, the German official who was one of the foremost figures in the recent events in Samoa, called at the White House recently and was introduced to the President. In speaking of affairs in Samoa, he said that both claimants for the kingship were willing to abide by the decision of the commission. He also stated that a white man's administration was favored by all the business interests.

The Spanish commission expect to return to Tarlac soon with full authority to secure the release of the Spanish prisoners held by the Filipinos. The commissioners hope to make arrangements under which the money paid for the ransom of the captives will be deposited in a bank to be drawn by the Filipinos at some future date, so it cannot be used to carry on the war against the United States.

A colossal enterprise has been undertaken by Messrs R. G. Reid & Sons, Newfoundland railway magnates, and the Dominion Coal Co. It involves the smelting of one million tons of iron ore annually, and the utilization of the output in the construction of steamships. It is intended to mine the ore in Newfoundland and smelt it at North Sidney, Cape Breton.

The sub-committee of the delegates to the Peace Conference have agreed on three points, namely: to abstain for a period of five years from firing projectiles or explosives from balloons or other new methods; secondly to abstain from using projectiles intended to scatter obnoxious gases, and thirdly, not to use bullets which spread or flatten upon impact.

Under the new treaty which went into effect July 17, Japan invites free and unrestricted commercial relations with the United States. Friendly relations between these two countries have been growing steadily for several years. The trade of the United States is larger than that of any other country with Japan except England.

Secretary Hay has sent instructions to the American delegates to the Peace Conference authorizing them to sign the arbitration convention reported by the committee. While the plan is somewhat cumbersome it is built upon the American proposal, and the President is well satisfied with the work of the American delegates.

A company of Northern capitalists has purchased seventy thousand acres of iron and coal land, four furnaces, and several hundred coke ovens in Alabama. An aggregate capacity of one hundred and eighty thousand tons of pig iron per year, and a daily output of two thousand tons of coal are to be the result.

Ambassador Choate attended the International Maritime Conference in London, July 14, as a delegate of the United States. In his address he said it was of the utmost importance that the maritime laws respecting collisions be made uniform, and he hoped that such would be the result of the conference.

The Marconi system of wireless telegraphy is to be put in operation in Hawaii as a means of communication between the islands of the group. There is only one channel between the islands in the group that is wider than the English Channel, where the system has proven successful.

The Retail Clerks National Protective Association in annual convention at Kansas City, Mo., voted to admit girls over sixteen years of age to membership. The convention also adopted a resolution declaring that women, giving equivalent services should receive the same pay as men.

The Rev. H. C. Hazen of Madura Mission, India, says the people in all parts of India are searching the Scriptures. The Mohammedans no longer hate the Bible but buy it without hesitation. In one Mohammedan village they bought the whole stock, and wanted more.

A Budapest engineer has invented a plate for use in wireless telegraphy which is more sensitive and simpler than Marconi's. It dispenses with the high mast at the dispatching station. Messages were recently successfully transmitted a distance of thirty-eight miles.

It is reported that the feeling in Spain against the Americans is becoming very bitter, on account of the Philippine prisoners. The Spaniards say they were not allowed to remain on the island and rescue the prisoners, while the Americans do not or cannot liberate them.

The Boer government has transmitted to the United States a copy of a petition addressed to it by nine thousand Outlanders, denying that the present government in Transvaal is tyrannical, as declared by other Outlanders supported by Great Britain.

The American liner Paris, so long ashore on the Manacles Rocks, has at last been successfully floated, a channel having been blasted for her with dynamite. The salvors expended $20,000, and it is said they are to receive $375,000, half the value of the steamer.

Chief Justice Field of the Supreme Court of Massachusetts died at his home in Boston, Saturday, July 15. The funeral services were held in the South Congregational Church, Wednesday, July 19. Rev. Dr. Edward Everett Hale officiated.

At a recent meeting of the Cabinet a scheme for the reorganization of the postal service in Cuba and Porto Rico was perfected. Many of the Americans connected with the service will be returned and natives will be employed in their stead.

Secretary Alger tendered his resignation to President McKinley, July 19. The resignation was promptly accepted to take effect August 1. Elihu Root of New York has been appointed his successor.

The Peary expedition steamer, Diana, sailed from St. Johns, N. F., for Sidney, July 15. She had supplies for two years and carried a crew of eighteen men who are well accustomed to arctic navigation.

The slayers of General Luna, the Filipino leader, have been acquitted on the ground of self-defence. The testimony showed there was a conspiracy to kill Aguinaldo and make Luna dictator.

Miss Clara Barton, accompanied by Miss Rathbone and other ladies, have left Havana on a tour of inspection of the Red Cross hospitals in various parts of the island.

The Pressed Steel Car Company has signed a contract with the Carnegie Steel Company, agreeing to take one thousand tons of steel plates per day for ten years.

An increase of fifteen per cent in wages has been granted by the American Tin Plate Company. Over thirty thousand employees are benefited by the increase.

Hon. W. J. Bryan says than if the Philippines were promised independence as soon as a stable government could be established, hostilities would cease.

R. G. Dun & Co.'s Weekly Review of trade says the volume of business is 63.7 per cent larger than last year, and 75.5 per cent larger than in 1892.

Colonel Robert G. Ingersoll died very suddenly, July 21, at the home of his son-in-law, Walston H. Brown, at Dobbs Ferry, N. Y.

Major-General Nelson A. Miles was unanimously elected a member of the Union Veterans Legion of Pittsburg, Pa.

It is reported that the portfolio of Secretary of War was offered to Governor Roosevelt but he refused to accept it.

The *Endeavor World* says that 8,968 Endeavorers have pledged themselves to read the Bible through this year.

The anniversary of the surrender of Santiago de Cuba was observed at Havana, July 17.

Admiral Dewey arrived at Trieste, Austria, July 20.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

To the Field.

I AM compelled to remind my co-laborers in the Field that I am not now engaged in the practice of the law. I have a few (?) other things to do, so that I have no time to read long letters, ordinances, proposed medical statutes, etc., give them the careful consideration necessary to an intelligent conclusion, and then advise in reference to them in such a way that I would wish my advice to be acted upon.

I shall have to decline all such requests in the future, and even at the risk of appearing to be discourteous, shall allow letters relating to such subjects to remain unanswered.

So far as I consistently can, I will aid the Field in this respect, as in all others, through our publications, but this is all the brethren must expect of me, unless the demands upon my time shall become much less than they now are, or long have been. SEPTIMUS J. HANNA.

Why Men Should Testify.

A CHARACTERISTIC feature of Christian Science meetings which visitors from other churches are quick to remark, is the unusually large proportion of men in attendance. The mere presence of men in unusual numbers at our meetings is impressive to inquirers, especially as so much is said about Christian Science being a woman's religion, but the men should be more than dumb witnesses for Truth; they should share more equitably in the privileges of the Wednesday evening meetings than they do, and the women no doubt would gladly yield larger space on the "floor" to them.

We do not hesitate to declare that Christian Science has done more lasting good among men, in redeeming them from sin and vicious appetites, in healing their diseases and by helping them in business than any other system of theology, philosophy, or medicine. Men are looking into Christian Science now more than they ever have in the past, and they go to the Wednesday evening meetings hoping to hear men speak, because, to their sense, the trials and temptations of men are peculiar. They think that it is easy for women to live up to the Christian standard, but feel sure that it is next to impossible for a man to do it. They are sick of the deceit, selfishness, and vulgarity of the worldly life, and are eager for something better, but hardly dare hope to find it. Perhaps they have heard that Christian Science gives men strength to overcome the temptations of men, and wish to hear what men have to say about it. If they go to a Wednesday evening meeting and see a lot of intelligent men present, and hear testimonials almost exclusively from women, they may go away discouraged. Christian Science men should see that something is said that will meet the needs of such inquirers.

With a heart filled with gratitude for benefits received, it is not difficult to tell about them. The fear which would make us ignoble mutes, must be mastered if we are to be worthy of future blessings. We must not speak for the purpose of exalting self,—it were better to keep still,—but our motive in speaking must be, to help others find the Truth.

We would not refuse to tell a man what Christian Science had done for us, were he to come to us to learn, and we would not fear to tell him. Then let us not refuse to tell, nor fear to tell, our experience on Wednesday evenings, for by their presence at our meetings, each man and woman is tacitly asking the question, "What has Christian Science done for *you?*"

Dawn of Truth.

EVEN in a criminal, a loving deed or any act of unselfishness is beautiful, and is a hint of the perfect man, created in the likeness of God, just as the first ray of sunshine which breaks through the morning darkness, is a prophecy of perfect day. As the first faint flushes of light at dawn are almost more beautiful than the full glory of noontide, because of the contrast with the ebony sky, so in a human character that has been blackened by error, the first faint expressions of goodness seem more beautiful, because of the background. Christian Scientists should be looking for good in character, even where there is no present expression of it. By so doing they will catch the first glimpse of the dawn of Truth in consciousness.

Christian Science reaches down to help those whom men despise, but whom Jesus loved. The self-satisfied man is often difficult to help, but they who have fallen to the depths of sin and despair want that which they have never been able to find in the world but which divine Love is always ready to bestow.

Christian Science cannot be imparted through the medium of words unless they come from the heart. Love is a universal language which is always eloquent. Generally our heat in argument is proportionate to our coldness of heart. Example is far more convincing than precept.

So much emphasis has been put upon the doctrine of the redemption of sinners by means of Jesus' crucifixion, that the priceless *living example* of Jesus has been almost overlooked by theologians; Christian Science declares that the only chance of salvation is to live according to the teachings of the Master.

The child's faith in the ability of his parents to supply all his needs is an example for Christians, who profess to believe in an all-loving, all-powerful Heavenly Father, but fail to repose confidence in Him.

An electric light in a bad neighborhood is a better protection than ten policemen. Christian Science is a light in human consciousness searching out and exposing the lurking-places of error.

One of the greatest surprises a man meets with in Christian Science is the discovery that the difficulties he dreaded and shrank from facing, fade as he approaches them and finally vanish.

Digitized by Google

Continual preaching of Truth without proving it, excites suspicion that either it is not the Truth, or that the preacher does not understand it.

Men seldom realize how pitifully small is their knowledge until they begin to "Consider the lilies of the field, how they grow."

Christian Science is a revealing agency which discloses to human consciousness the good in man, which has been covered up.

The men who instigated the populace to kill Jesus were not ruffians, but priests and prominent citizens of Jerusalem.

Christian Science teaches that there are no worthy ideals that are not attainable.

Every one may be healed of his diseases, if he will depart from evil and do good.

The Truth we live is self-evident; the Truth we talk is debatable.

Christian Science.

BY AN INVESTIGATOR.

PREJUDICE, religious or political, is always condemned —still nothing flourishes so well.

Would you consider yourself a competent critic on Chinese literature without having studied it? Would you speak on Egyptian hieroglyphics, on Assyrian classics if unfamiliar with the language of those people? No. Yet people who have never read the text-book of Christian Science, Science and Health, by Mary Baker G. Eddy, which has now passed the one hundred and sixty-first edition of one thousand copies each, condemn it. This is bigotry. What right have you to pass judgment upon a belief, the people who believe it, and their aspirations without having studied and read their principles? Yet a proportion of public opinion seems to do this very thing. There is no religious denomination on the face of the globe which within a few years has spread so rapidly as the Christian Science movement. Many of the followers are highly cultured and representative people of the American nation. Christianity, pure and undefiled, is presented in that famous text-book, Science and Health. One of the signal characteristics of this Spiritual Science is healing by God; the Omnipotent Mind, sublimely potent as a curative factor, when compared with a drug, alterative, powder, or pill. Is not this true? Do we not hear it today voiced from the lips of leading university professors, that the mind governs the body? What does the Bible declare on this subject? "As a man thinketh in his heart [mind], so is he." The body is moulded and fashioned by the thought. All is mind. The body does not move if the mind does not direct it. The body, no more than any inert matter, can give expression to any emotion, suffering or rejoicing, unless the mind behind it as the motive power, directs and demonstrates it. Jealousy is always mental. Hatred is mental, and you know and see how these phenomena disfigure the features and turn an angelic countenance into that of a fiend.

Plant a strong thought in one's mind, mature it from day to day, and it becomes a reality, a tangible living presence. You remember the oft-repeated story told of Lord Byron. While a boy he was warned by a fortune-teller that he would die in the thirty-seventh year of his age. That idea haunted, that thought pursued him through his life, until it became impressed upon his belief as a reality, and in his last illness he mentioned it to the anxious watchers by his bedside as precluding all hope of his recovery. His physicians said that it repressed the energy of spirit so "necessary for nature in struggling with disease." Think of this as a concession from the medical profession!

Do we not know that honor, fear, and courage have nothing to do with the body, but are all manifestations of mind-force? Do we not know that the entire features put on mourning for the death of self-respect, that fear often paralyzes the body, while courage is a great invigorator to the physically debilitated?

Not many years ago in Philadelphia, several medical students agreed to experiment upon a companion. On meeting him, each would ask him what was the matter, adding that he was looking very badly, and in a few days he breathed his last, although in robust health when the heartless joke was started.

You say this is hypnotism, but while Christian Science has not a particle to do with this vicious, mesmeric force, it illustrates the fact that Mind rules. We see from cited illustrations that there are bad thoughts and good thoughts. Christian Science by an unfailing principle induces one to cling to the good thoughts and conquer the bad—the mischievous errors of mortals. Mary Baker G. Eddy, the Founder of Christian Science and author of its text-book, Science and Health, has given to the world the entire system of her most startling, yet simple revelations. Have you read the book? No. Have you studied it? No. And yet you condemn it like a mediæval fanatic.

Christian Science, like any other science, as for instance, astronomy, chemistry, or music, must be learned and demonstrated again and again. Every science is based on an eternal principle, and Christian Science has the same basis. You may argue that principle is only an impractical, flimsy theory of the imagination. Be it so. But with these flimsy theories of geometry and mathematics were built that miracle of engineering skill, the Brooklyn Bridge, the Eiffel tower, the Ferris wheel, and man has bound the continents of the earth together in one unbroken chain of instant communication, the electric cable.

You say that Christian Science is only a theory—an imaginary cult. Say so, if you please, but yet these much derided theories, foolish as they are pronounced by the uninvestigating minds, have taken thousands of suffering mortals from the very jaws of death, when they had been abandoned by the medical fraternity as hopeless and incurable, and both physically and mentally healed them. The truths contained in that most remarkable work, "Science and Health with Key to the Scriptures," were not copied or plagiarized, neither were they imparted by human agency or human help. From whence then did Mrs. Eddy get those truths—truths which are destined to revolutionize society, church, and state? As a companion question to this, let it be asked from whom did Shakespeare get his dramas, Angelo his paintings, Beethoven his symphonies, Mozart his sonatas, Edison his ideas, and unlettered Lincoln his statesmanship? From whom? And yet what they received was only a glimpse—a flash of Divine Intelligence.—*Dayton (Ohio) Herald.*

Bishop Taken to Task.

He Attacked Christian Science and is Rebuked by a Rector.

Rev. V. Marshall Law, rector of the Church of the Advent in East Oakland, does not agree with Bishop Moreland's opinion of Christian Scientists. He says,—

I am not surprised that Bishop Moreland had to take

Digitized by Google

something besides the accredited Bible from which to choose a text for his sermon against Christian Science. With all deference to the Bishop, there is a lack of the whole truth in what he says as published yesterday in the *Chronicle*.

The words of Gamaliel in the early days of Christianity to those who opposed Christianity can well be pondered by the Christians of our own day: "Then stood there up one in the council, a Pharisee, named Gamaliel, a doctor of the law, had in reputation among all the people, and commanded to put the apostles forth a little space; and said unto them, Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. . . . And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God. And to him they agreed."

Church people speak against Christian Science because they cannot bear to have Mrs. Eddy, a woman, the head and front of the sect. They forget that the English nation is away ahead of all nations on the face of the earth, and the leader of that nation for sixty years has been a woman, Queen Victoria. The fact that Christian Scientists owe their sect to a woman is nothing against it. Bishop Moreland says that Science and Health seeks to supplant the Bible. Christian Scientists take Mrs. Eddy's book, and we take the Prayer Book. Many times the Prayer Book is found in the hands of Episcopalians, but it does not supplant the Bible. No people that I know anything about read the Bible as much as do Christian Scientists both privately and publicly, and they take Science and Health as a commentary on the Bible.

The work of healing was an element of Christ's mission here on earth, not an incident of that mission. His disciples, even St. Paul, who never saw the Lord, healed as Christ did. The fact that Christians have gotten out of the habit of regarding healing as a part of Christ's mission, cuts no figure at all. What the most of Christians say does not make the New Testament.

I am not a Christian Scientist. I am an Episcopalian and rector of the Church of the Advent here in East Oakland, and I want to answer the Bishop's statement that there is no call for another sect of Christians. So I thought once, but I have changed my mind. I have tried preaching healing to my people. I have told them that we should take all of the New Testament for our guide. I have endeavored with discretion and boldness to bring to their attention the full mission of Christ, but the majority of the church think they know better than the New Testament, and the greater part will have no healing, notwithstanding Christ taught it, and Bishop Moreland concedes that Christian Scientists do heal. So the statement of the Bishop that there is no room for another sect is not true. There is a call for just this sect of Christian Scientists, and the fact that they number more than a million all over the world, in one generation, is proof of it. Here in Oakland they get out a hall full at their mid-week meetings on Wednesday, and what one of the other churches would not rejoice to do the same?

Medicine is a system of guesswork, as I can testify after nine and a half years' practice, and physicians know it to be so. They do not take their own medicine, and they do not take any of the various diseases they go among.

When we ordained Bishop Moreland, many other bishops laid their hands on his head before all the people, and as soon as that was done he was presented with the Bible and instructed by the presiding bishop to study it, and among other things he was told to "hold up the weak, heal the sick," etc., and not a word about medicine. Did the presiding bishop mean that?

At every confirmation service the Scripture is read. In other words, at every confirmation service is read the authority for the laying on of hands, a beautiful service, with the Bishop there and the class standing before him. The minister reads from the eighth chapter of the Acts, beginning with the fourteenth verse. If his authority is found there, let him read the verse just before that where the sick were healed in these words, "Then Simon himself believed also: and when he was baptized, he continued with Philip, and wondered, beholding the miracles and signs which were done." Read the seventh verse, too.

San Francisco Chronicle.

Legislation and Christian Science.

PHYSICIANS and lawyers in a number of American cities have been discussing with much animation the advisability of organizing a crusade against Christian Science, and demanding drastic legislation prohibiting its practice. It is practically settled that in New York and Pennsylvania a determined effort will be made to procure such legislation from the next legislature. But the success of these efforts may well be doubted. Enlightened public opinion will not sustain compulsion and paternalism in matters of this delicate nature.

Those who scornfully and bitterly denounce Christian Science as a superstition or fad have a right to express their opinion, but they have no right to mistake personal beliefs for demonstrated truths which the state ought to enforce as essential to public health and safety. An able and impartial article in *The American Lawyer* warns them against the course they contemplate. It is of the opinion that "the case seems one where each individual may be permitted to act as he or she thinks best about calling a Christian Science healer, and any legislation which would tend to restrict this would be far too paternalistic to deserve anything but failure." It would be outrageous and tyrannical, one may add.

Medicine is not an exact Science. The state recognizes a number of contending schools, which are no nearer agreement than they ever were. And, as *The American Lawyer* reminds us, the medical profession has not been hospitable to new ideas. Hypnotism, at last admitted as a possible aid in effecting cures, has had a fifty years' uphill struggle, and vaccination is still a subject of heated controversy. Not everything is quackery which is denounced as such upon its first appearance. Some things have extorted toleration and respect in spite of resolute hostility, and in time—who knows?—even certain principles of Christian Science may be accepted by the medical profession.

At any rate, the state must keep its hands off and let the fittest survive. Of ocurse the spread of contagious and infectious diseases must be prevented, and no Christian Science healer can claim the right to endanger the lives of others. Notification, isolation, and all the other means of fighting contagion must be enforced as heretofore. But to compel responsible adults to call in physicians would be intolerable despotism. To quote our legal contemporary again: "Just what amount of credence should be placed in their [Christian healers'] methods must be determined by the individual patient, or should he not be capable of acting for himself, then by those to whom the law has confided the duty of protecting him." Legislatures will reach this same conclusion and decline to meddle with the question.—*Chicago Evening Post.*

Christian Science History.

FOLLOWING are a few comments from letters and articles written by newspaper editors upon the new pamphlet, "Christian Science History."

Digitized by Google

Letters.

I am in receipt of a copy of "Christian Science History," and thank you for same. I have made favorable comment in my paper, and will be pleased to notice any of your publications you may send me.

CHRIS. S. RITTER, attorney-at-law and editor *Farmers Friend,* Iola, Kan.

Allow me to acknowledge the receipt of your "Christian Science History." I have recently become quite interested in Christian Science, and the more I investigate the subject the more I am convinced that it is a boon to humanity.

J. M. BOOKER, editor, *The Sun,* Colorado Springs, Col.

Please accept thanks for "History" received. Your denomination is small in our village, but we realize the fact that it would be a good thing for the community were it to greatly increase in number.

J. W. SAUNDERS, Middleville, Mich.

We appreciate your pamphlet and find many good things in it. We write to thank you for the same.

W. J. STANSFIELD, editor *Herald,* Rison, Ark.

Your pamphlet received with thanks. Our best wishes for your success.—*Advocate and Herald,* Salemville, Pa.

Newspaper Comments.

Advertiser, Delavan, Ill.

The Christian Science Publishing Society, of 95 Falmouth Street, Boston, Mass., kindly favors us with a copy of a neat little work entitled, "Christian Science History," by Septimus J. Hanna. It contains a statement of facts relating to the authorship of the Christian Science textbook, "Science and Health with Key to the Scriptures," etc. The purpose of this booklet, it is said, is to present to all fair-minded people a few facts in contradistinction to falsehoods as to the life and work of the Rev. Mary Baker G. Eddy, the author of the Christian Science textbook, etc., and the Discoverer and Founder of Christian Science. The booklet is intended for disinterested people, who desire only to know the truth, to consider the probabilities and non-probabilities of the question in all its aspects, regardless of past or present views on the subject of Christian Science.

Truth, Corsicana, Tex.

The *Truth* has been complimented with a little booklet sent out by the Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass. The author, Septimus J. Hanna, is a fluent writer, an able scholar, and terse exponent of his views. The booklet gives quite an insight to the teaching of Christian Scientists, while at the same time it refutes a lot of falsehoods which have been published about the Founder of Christian Science, Mrs. Eddy. Well, perhaps we should not say she was the Founder of Christian Science, but that she has turned the light on the doctrine as taught by the Master and his followers nineteen hundred years ago. The work is a valuable one to all who wish to read up on this line of thought. Mrs. Eddy and her position as a leader is clearly set forth in the work. Get it and read it. Address given above.

Putnam Journal, Unionville, Mo.

"Christian Science History" is the title of a forty-four page pamphlet by Septimus J. Hanna kindly sent us by the publisher, the Christian Science Publishing Society of 95 Falmouth Street, Boston, Mass. It is a complete refutation of the many falsehoods uttered and published about the Founder of Christian Science, the Rev. Mary Baker G. Eddy, and shows that lady to be a living example of the fact that one can obey the injunction of the Master in the Sermon on the Mount, Matthew, 5 : 44, "But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." Besides the aforesaid refutation, it contains valuable information that makes it profitable and entertaining reading, even to those who are not Scientists, if they wish to be well informed.

Press, Pittsburg, Pa.

The Christian Science Publishing Society of Boston, has sent the following note, which will explain itself: "In order that you may have on file some of the facts in connection with the history and initiation of the Christian Science movement, we are sending you a copy of a late pamphlet entitled, 'Christian Science History.' We believe there is always a desire on the part of editors to establish what is true, and are glad to afford the means for presenting the truth regarding a movement which is establishing good will among men and regarding the leader thereof."

Advertiser, New Decatur, Ala.

We have received a good deal of Christian Science literature of late, the last being a "Christian Science History," published by the Christian Science Publishing Society of Boston, Mass. Those interested in this matter can address these parties for any book or periodical in this line. We have never tried Christian Science, or seen it tried upon our friends, but have heard of some wonderful cures from parties whose word we would never think of questioning, so if we are not actually convinced we are wide open to conviction.

Times-Union, Albany, N. Y.

"Christian Science History," is the title of a small publication in book form which treats of a matter just now of universal interest, whether one may be a believer or not. The writer of the book is Septimus J. Hanna, and its purpose is to present a statement of facts which will refute errors now in the public mind if the facts stated may be given credence. Boston: The Christian Science Publishing Society, 95 Falmouth St.

Times, Hartford, Conn.

Christian Scientists and others interested in the subject will be attracted to a pamphlet entitled, "Christian Science History," by Septimus J. Hanna. From the Christian Science standpoint, it contains a statement of assertions relating to the authorship of the Christian Science text-book, "Science and Health with Key to the Scriptures," issued by the Christian Science Publishing Society, 95 Falmouth Street, Boston.

The Florida Philosopher.

We have received a copy of "Christian Science History," a neat pamphlet written by Septimus J. Hanna. Christian Science is attracting a great deal of attention in Boston, and members of orthodox churches are doing their usual amount of denunciation. The pamphlet is issued by the Christian Science Publishing Society, No. 95 Falmouth Street, Boston, Mass.

Times, Pittsburg, Pa.

"Christian Science History," by Septimus J. Hanna, is a pamphlet containing a statement of facts relating to the authorship of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and answers to certain criticisms and alleged erroneous statements with regard to Mrs. Eddy and her claims. Boston: The Christian Science Publishing Society.

Herald, Syracuse, N. Y.

Septimus J. Hanna is the author of a pamphlet published by the Christian Science Publishing Society, No. 95 Falmouth Street, Boston, entitled "Christian Science History." It is a defense of Mrs. Mary Baker Eddy against attacks made upon her by press and pulpit.

Letters in the Boston Traveler.

Christian Science.

To the Editor:—I was much interested in certain statements by Judge Hanna in connection with the proposed prosecution of certain Christian Science healers (so-called). I have just returned from England after several months' absence, and can say that his statement, that Mr. Harold Frederic (whose death called such marked attention to the subject) was for a considerable time under the unsuccessful care of regular physicians previous to the employment of the Christian Science practitioners, is the general understanding of the case in England. There was at the time a vigorous attempt made by the health authorities and medical practitioners to incite popular indignation, but, in spite of the fact that the parties involved were very humble and obscure persons, the case dropped of its own weight.

While abroad I was for a time the guest of Major Edward Todd Smith, a bluff old Scotch soldier, little given to nursing fads or foibles, and he informed me that his family had in several instances been benefited by the practice.

In one issue of the *Traveler* I notice a symposium by a number of Boston divines. Now, all these gentlemen hold to certain theological tenets, based upon selections from what is assumed to be divine revelation. They each believe in his own special road to heaven, and each holds the other to be partially or wholly wrong. They do, however, display a singular unanimity in condemning the Christian Scientist. It is certainly pert and may appear sufficiently convincing to these self-contained gentlemen, to wrap about them the robes of mental superiority, and exclaim, "It is neither science nor Christianity," but, unfortunately for them, the average person will require some facts and arguments.

That the practice is unscientific will be demonstrated by an authority more competent than any minister of the gospel. That matter exists and is susceptible of change under certain conditions is well understood. The absolute failure of the practice in the realm of surgery is too clear to be discussed. The influence of mind over matter, while recognized, is not important. We hear much of the man who leaps from his bed, triumphantly, refusing to be ill. It is the experience of physicians that such apparent triumphs usually destroy the chance that might exist for recovery.

That Christian Science is Christian and finds its support in Holy Writ is as susceptible of acceptation as any other Christian postulate. From that day, ten days after the ascension of the Lord, nearly nineteen hundred years ago, when the apostles stood in the streets of Jerusalem to preach the new dispensation, the Scriptures bristle with references to this practice. The divine intervention was a potent force in the spread of the gospel. When reason found difficulty in accepting the preaching, the miracle was at hand to supply the deficiency. The history of the primitive church is equally eloquent on this point. The whole woof and warp of Christianity is interwoven with this principle of divine intervention. The field of Christian Science may be invaded by the charlatan. Is not this fact notoriously true of all religions? The livery of the Lord is much valued by the devil. Charlatanism is as old as religion. The doctrine of Christian Science may be wrong, probably is, but so long as its acknowledged aims are good, so long as the belief is shared by apparently intelligent and virtuous men; so long as its tenets find their origin and support in the supposed revealed divine Word, it is entitled to respectful attention and cheerful toleration from all, but particularly from other denominations.

Yours very truly,

Malden. CAPT. THOS. TOWNSEND.

To the Editor:—Captain Thomas Townsend of Malden, Mass., in a letter to the *Traveler,* volunteers his testimony as a disinterested witness that Judge Hanna, editor of the *Christian Science Journal* and *Sentinel,* has correctly stated the facts in regard to the Harold Frederic case, the captain's information having been gained in England, whence he has just returned.

He manifests a spirit of cordial toleration, which is very much to his credit, for it is apparent from his letter that he has not studied Christian Science, but has learned to respect it because of the favorable impression he has gained from his acquaintance with people who are trying to be Christian Scientists.

Captain Townsend rebukes the intemperate zeal of clergymen in denouncing Christian Science as being "neither Christian nor science," when its claim to Christianity is so clearly supported by Scripture. Such fair-minded championship from a non-Scientist is much appreciated by us, and, that he may like our cause still more, we wish to assure the captain that he is mistaken in implying that the practice of Christian Science is unscientific, that "the absolute failure of the practice in the realm of surgery is too clear to be discussed," and that "the doctrine of Christian Science may be wrong, probably is."

The practice of Christian Science is not unscientific, but, on the contrary, it is pre-eminently scientific. *Materia medica* is unscientific for the following reasons: It is without either fixed principle or rules of practice, and two practitioners of the same school even, will seldom or never agree on either diagnosis or treatment, and neither will be likely to agree with himself on two days of the same week. *Materia medica* busies itself with treating effects. It may trace a fever to the stomach and say that a congestion in that organ is the cause of the fever, but it does not recognize the scientific fact that the primary cause of all physical phenomena is mental, and proceed to handle the cause.

Christian Science is scientific in practice because it handles the cause of sickness and proves the correctness of its method by the resultant cure. It is scientific because all true Christian Scientists have the same text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, and all of them practise in accordance with the rules laid down in this book, and practitioners in every part of the earth obtain results that are so nearly identical by employing the same methods, that the rules may properly be said to have been scientifically demonstrated.

Whether or not Christian Science has failed in the realm of surgery is simply a question of fact. We know that Christian Science is successful in the realm of surgery, and Captain Townsend or any other sincere investigator can be provided with the means of obtaining enough proof to convince him that it is.

If Captain Townsend will question a few Christian Scientists and learn of the priceless benefits each one has received since becoming a convert to this scientific Christianity, he will be convinced that a religion which can do and is doing so much good for mankind cannot be wrong.

HENRY D. NUNN.

The Lectures.

At Florence, Col.

IN refreshing contrast with the spirit of sectarian bitterness and clerical spite which has been lately exhibited toward Christian Science in one section of the country, is the fraternal feeling and kindly fellowship shown in another. It is noteworthy too, that these extremes are to be found in the same denomination, though the churches are a thousand miles apart.

In the little town of Florence, Colorado, the second lecture within a year by a member of the Board of Lectureship, was given under the auspices of the organized First Church of Christ, Scientist, which lecture has peculiar significance, inasmuch as it was delivered from the pulpit of a flourishing Methodist Church. The largest public hall in the town, called by courtesy the Opera House, was objectionable for several reasons, so it was decided by the committee having the matter in charge, to make application for the new Methodist Church for the evening of the lecture.

From a material standpoint it seemed improbable that the church could be had for the purpose wanted, but the claim was handled in Science and the result was left with God. A few days after the application was made came a courteous note saying that the church was at our disposal on the evening wanted. Later, in an interview with the pastor, it was learned that there was not a dissenting voice when the matter was laid before the trustees of the church, and regret was expressed that their financial condition did not permit of their giving us the church without imposing a moderate charge for its use—enough to cover light, janitor's services, etc.

Judge Ewing's lecture, Saturday evening, July 8, was attentively listened to by a large and intelligent audience, composed mainly of church-going people of different denominations. In introducing the lecturer the First Reader referred to the growing good will shown toward Christian Science by those of other churches, and said in part:—

"The pulpit, too, is beginning to realize that Christian Science is not the unmitigated evil it was supposed to be, and in some notable instances, clergymen are extending the right hand of fellowship to the exponents of Christian Science. It speaks volumes for the liberality of thought and Christian tolerance of the church people of the town of Florence, that it is possible for you to-night to hear this lecture in this beautiful church. I believe I am stating a momentous fact when I say that this is the first time in the annals of religious history, that a Christian Science lecture has been delivered from a Methodist pulpit. If I were to venture a bit of prophecy, it would be this—that within the next five years Christian Science will be welcome within the walls of every temple of God in this broad land,—for it is but the Word of God, the One God whom we are all seeking to know aright."

It is interesting to know that the same method was used to raise funds to defray lecture expenses as was employed by this little church a year ago. At a Wednesday evening meeting, after the usual testimonials, slips of paper were passed and those so inclined were asked to write the amount they would contribute to the lecture fund, without signing names. The amounts on the slips were then added and the slips destroyed, and as the amount thus indicated was thought to be sufficient to start with, the lecturer was engaged. Not a penny of it was solicited, yet when the time came for paying the bills it was found that not only the amount subscribed had been paid, but a greater sum. When the amount received and the amount to be paid were computed it was found that they balanced to the cent.

"For whosoever hath, to him shall be given, and he shall have more abundance" (Matthew, 13 : 12).

The Florence *Daily Tribune* published an excellent account of the lecture. WILLIAM R. RATHVON.

At Aspen, Col.

The Christian Scientists of Aspen brought to this city, Thursday evening, July 6, from Chicago, Judge W. G. Ewing, who delivered a lecture in the Wheeler Opera House upon the subject of Christian Science. The Aspen society is a very zealous and intelligent body, and has society rooms in the State Bank building, where they meet regularly during the week, and each Sunday. Yesterday afternoon Judge Ewing addressed the society in their assembly hall in the State Bank building. The audience was a very large one, being composed, in addition to the Aspen public, of a large number from New Castle, Glenwood Springs, and other cities.

To one entering late the Wheeler Opera House last night a revelation was presented, especially if he had misjudged in any way the attitude of the public mind toward this modern religious question. The house was filled with all classes of our citizens; it was a splendid audience, the close attention, the intelligent appreciation re-inforced one in the belief that independent thought was now impregnable against the sarcasm and ignoble shafts directed toward the new and progressive mental departures upon all questions affecting the human family. In view of the rabid and persistent onslaughts made upon this new religion, especially within the past few months from reputable and disreputable quarters, it was a splendid sight to witness the courage and the intelligence which stands alone, and which henceforth makes its own footprints in unknown mental pathways, regardless of who hath preceded it. It was a sign of spiritual growth, and a demand upon the teachers for a deeper and richer interpretation of eternal Truth, of a larger grasp of divine Love.—*Aspen Daily Times.*

At Rapid City, So. Dak.

Standing room was at a premium at Library Hall Saturday night, July 8, and many were turned away who desired to hear Edward A. Kimball's lecture on Christian Science. Some thirty or forty were present from Deadwood and Lead, and a more attentive or interested throng never greeted a speaker in Rapid City.

The speaker was gracefully introduced by Edmund Smith in a few brief and timely remarks regarding the misrepresentation and abuse accorded the advocates of new ideas, be they religious, political, or otherwise.

Without wasting time or words, Mr. Kimball went at once to his subject, his task being to present the truths—or a portion of them—held by Christian Scientists.

Regardless as to what we may believe, the great throng of people who greeted Mr. Kimball must admit that his faith is indeed well founded—that it is both Christian and Scientific, and that its wonderful results cannot be denied. He dispelled many erroneous ideas that had been gained through pulpit and press, and the people of Rapid City exhibited an exceptional broadness of mind and charity to those of differing ideas in according this distinguished lecturer the reception and attention they did.

The stage was beautifully decorated in white and gold, with appropriate mottoes and a profusion of flowers. The national colors were also prominent, and the whole event was a gala night for the Scientists of the Black Hills.

The Black Hills Union.

At Chadron, Neb.

Edward A. Kimball of Chicago, is here according to an arrangement made by the Christian Scientists to lecture, and the largest hall in the city is being filled to its utmost.

Digitized by Google

People have driven in from thirty-five miles, and among those from Wyoming is a son of Governor Richards, who is a student of the speaker. Enemies of Christian Science anticipated his coming, and the Gordon Hospital has been waging a fight against the lecturer and Scientists.

Press Despatch, July 1.

At Other Places.

Brookings, S. D.—W. G. Ewing.
Burlington, Kan.—W. G. Ewing, Wednesday, June 21.
At Emporia, Kan.—W. G. Ewing.
At Canon City, Col.—W. G. Ewing, Friday, July 7.

From Other Standpoints.

THE adherents of different schools of thought are beginning to treat each other with more courtesy and forbearance, — not that either surrenders or proposes to surrender his own opinions, and should not do so (unless satisfied that he is in error), but he is disposed to think his opponent may be honest and sincere. Men are beginning to learn that truth has many aspects; that some of these impress one mind or one class of minds, and some impress other classes of minds, and the result is differences of opinion which are unavoidable. When this becomes general, the tone and character of discussion will be changed. A temper of mind wholly unfavorable to the discovery of truth will give place to a temper conducive to such discovery. No discussion is likely to result in agreement, if conducted with bad temper, if one of the disputants feels that the other is wilfully wrong. In all such cases it is simply impossible for one of the parties to weigh candidly and impartially the arguments of the other; and the result is, they part where they began.

A. S. WHEELER.
In *The Christian Register* (Unitarian).

Scarcity of Candidates.

THE venerable Bishop of Virginia has called attention to the falling off in the candidates for Holy Orders, and with his accustomed directness and power has pointed out that a continuance of such a condition could only mean decadence for the Church. He maintains that this state of things should produce great searchings of heart on the part of the ministry. He goes to the very root of the matter in saying that men should not be "persuaded" to enter the ministry of the Church, for the call to that high office comes from God, but that the clergy should so instruct their people that their hearts would be open to this call from on high.—*The Churchman* (Episcopalian).

The Unity of Truth.

Now sincerity does not of necessity imply narrowness; but it is much easier to give one's self up wholly to a simple than to a complex and highly elaborated system of ideas. It is not impossible for the intellectually rich to enter into the kingdom of Heaven, but it is harder for them than for the intellectually poor. For the practical value of belief depends less on how much of the truth the mind grasps than on how much of the mind the truth controls.

One thing is sure. No two inconsistent beliefs can be entertained in the mind at the same time without disaster. There is not one standard of truth for geology and another for Genesis. There is not one standard of credibility for secular and another for sacred history; one for Herodotus and another for the authors of the Pentateuch; one for Romulus and Remus and another for Joshua and Jonah. The truth is one, as the mind is a unity. No man who tries to hold unreconciled inconsistencies in different chambers of his mind can ever feel the sweet compelling charm of truth, or experience the blessed constraint of certainty which is in store for the sincere alone.

President Hyde of Bowdoin College in *The Independent* (Presbyterian).

Seven Million Methodists.

THE *Methodist Times* of London, gives figures showing the present membership and constituency of the Methodist Church and its growth during the last one hundred years. Its members in 1898 numbered 7,100,601; its adherents, 28,402,404. Of this number the great majority, 5,864,175 members, are in America. Taking the same ratio of members to adherents as is found in the total membership, it would give approximately 23,200,000 adherents to Methodism in the United States.—*The Outlook*.

The Spiritual Vision.

EACH of us has two pair of eyes—the eyes of the soul and the eyes of the senses. In conversion Jesus performs the miracle of opening the eyes of the soul that have before been shut. Then the whole being sees for the first.

The Watchman (Baptist).

Metaphysics: the New Cult.

BY EX RAE.

Our little systems have their day;
They have their day and cease to be;
They are but broken lights of thee,
And thou, O Lord, art more than they.

ADVANCED thinkers have ever been in the minority, misunderstood, jeered at, persecuted, and particularly is this the case in religious matters. No new system or idea in religion was ever yet advanced but it at once met opposition. The followers of the new suppose they reach unto something higher and better than that they leave; while they who are left, pooh at the thought—the presumption of the thing, that they can be shown anything better than that they have been born to, than that their fathers and grandfathers of blessed memory have instilled into them, than that they themselves have been baptized into and have sworn to live and die by. Hence, martyrdom begins on the one hand, and a supreme crucifixion by contempt on the other.

The writer attended a Wednesday evening meeting of the Christian Science Church awhile since, and from the moment of entry could but think that the martyrs have the best of it. Indeed, they seemed to be enjoying it, and well they may. Of all pretty, cheerful, inviting church homes with which he is acquainted, the First Church Chapel, at junction of Troy and Lansingburgh, takes first rank. Its well furnished simplicity, arches of light, palms, ferns, flowers, and, crowning all, its glorious painting of the resurrection, breathes an atmosphere of religious welcome which takes possession of one. So with the people. They were happy. There could be no mistaking this fact. They filled the house. They had come for a feast of good things, and they had brought good things with them. Their happiness shone in their countenances and was in harmony with the scene. Not a doleful note was there in the symphony.

Was this a prayer meeting? It surely was not Ex Rae's usual idea of one.

The service opened with an organ voluntary and singing, followed by reading by the First Reader, Mrs. E. K. Betts, who read from Genesis the story of Sarah and Hagar; then from Galatians, St. Paul's application of the story, where he speaks of the persecution of the heir according to the Spirit—Isaac—by the son of the bondwoman —Ishmael—and the casting out of the bondwoman with

Digitized by Google

her son. This she followed by readings from "Science and Health with Key to the Scriptures," by Rev. Mary Baker Eddy, the Founder of Christian Science, which book is the universal text-book of this new cult. Then followed an impressive season of silent prayer, in which all were enjoined to pray, and an audible reciting of our Lord's Prayer.

Mrs. Betts then stated that Christian Science students not only study the lesson which is appointed by the church for the week, but they endeavor to demonstrate its truth. The lesson for that week was the subject for the coming Sunday's services, "Mortals and Immortals." Scientists were learning to distinguish between the two,—the mortal and the immortal, and put the distinction to practical use. By way of illustration she related this story:—

One day there called at her home an eager, careworn, anxious man, with rough exterior but big heart, and besought her to come immediately to his home, for his baby was dying. "I fear," he said, "that she cannot live till I get back. We may not find her alive." Mrs. Betts sought to comfort him and assure him with hope and faith. On their arrival at the home they found the child on its bed, to all appearances dying, fever raging in the little frame. She told the family she could work better if left alone with the child. They withdrew and she at once set to work to "realize the nothingness of this mortal claim." She "unfolded and expressed emphatically this thought, that Life is Immortal; not subject to mortal beliefs and fears. That God is Omnipresent, Omnipotent Love, and that only His ideal was present."

Soon she summoned the father, saying: "See, your little one is better. Have no fear now. You will soon see her recover. I will come again in the course of a few hours." She did so and found an improvement, and calling again next morning she found the child eating its breakfast and enjoying it, pounding the table with its chubby hands the while, "happy, gleeful, and well."

The story told, the speaker at once threw the meeting open to the congregation, with invitation that others follow her example by narrating demonstrations from their own experiences, which invitation was readily accepted.

One told of her husband, an unbeliever, who was cured of a severe attack of pneumonia last winter and who acknowledged that it was by the help of Christian Science.

Another told of a friend, a young woman, daughter of a prominent druggist in New York City, who was being educated for the medical profession. Her father failed in business and her studies had to be abandoned. She entered a hospital as trained nurse, was observant and successful, but made the sad mistake of carrying an excellent dinner to the wrong man—a man who was being dieted—for which fault she was heartily reprimanded, but had the satisfaction of seeing the wrong man's speedy improvement and restoration to health. She afterward assisted intelligently and well in delicate surgical operations, when one day she fainted. Valvular affection of the heart was the diagnosis, and she was dropped from the service of the hospital. From that day she faded till it seemed that her time on earth was short, when the usual thing happened. The Christian Science friend stepped in, suggested treatment, and the girl completely abandoned the use of medicine and is now well and doing excellent work in Christian Science.

Other testimony followed not alone of physical cures, but women told of help in domestic affairs and men of guidance and help in their business; while one, a lady from Brooklyn, told of a young lawyer in New York City who sometimes confers with his mother, who is a Scientist. One evening he dolefully told that he had a difficult case to present to the jury next day. A mill owner had endeavored to correct a boy in his employ by shaking, cuffing, and kicking him, so that the boy claimed to be incapacitated for work and had brought suit for damages. The lawyer was anxious; he feared the result. His only witnesses were the attending physician and a weak sort of boy who might have been tampered with by the defendants, and whose memory was uncertain.

"Do you believe the boy's story?" asked the mother.

"I do not know. It is not my business to decide as to it. I can but present the case and the court will decide."

"Why do you not ask me to treat this case according to the principle of Christian Science?" continued the mother. "Would you like me to try it?"

"Certainly," said he; "I wish it honestly settled."

Next day the trial came on. The Scientist, at her home, mentally declared the utter supremacy of the heavenly court, the One Judge. "Shall not the Judge of all the earth do right?" Evil could have no weight or power. Deceit, dishonesty, double-mindedness could not abide within this court. Truth was eloquent, triumphant, and only the voice of Truth should be heard.

At eight the father of the young lawyer came home to report that all was lost. He expressed himself emphatically that the case had not a leg to stand on. The lawyer's pleading had been eloquent, but the defense had witnesses, two or three doctors, to refute his one, and the mill owner was in great power. "The case is lost," said he.

But the end was not yet. Later came the report that the jury was out a half hour and on returning had given a verdict for the plaintiff.

"This result," said the narrator, "was not obtained by mesmeric or hypnotic influence. It was the result of Mind, God, Good."

The meeting closed and the attendants who had brought good with them had a double portion to take away.

And yet this was the people and this the cult which has been derided and scoffed at in Ex Rae's presence and reading. These the people, telling with irrefutable testimony of striving to live in Christ's ways, to do as he commanded; of wonders wrought and of giving God the glory; of Mind as being superior to matter, and the dominating power of Mind, as God. Yea, indeed, God—and that God is All-in-all. Ex Rae could but think it might be good for some with whom he is acquainted to be infected with this same cult. But O, tell it not. Some of these very same would no more dream of attending such a meeting as this as he had done, and of mingling with these people, than they would of crossing the threshold of —— Ah! Ex Rae will not say naughty words. He has been to meeting. Besides, too, these Christian Scientists do not seem to believe in everlasting punishment. They do not say much of hell, and fire, and brimstone. They seem to think that man makes his own hell as he goes along if he does not walk in the way to heaven. And, speaking of heaven, they actually talk that heaven is right here; that the kingdom is within them. What a strange cult!

And thus he mused as he passed down the street. What will our lawyers think, thought he, of a court of justice swayed by Christian Science? of Mind, Infinite Mind, in the court room? of God, Truth, Love, Omnipotent, Omnipresent, in the jury room?

The incident which impressed Ex Rae more than any was that of the raising of the fever-stricken babe from death's door and its restoration to its father, the man with the rough exterior but big heart; for he had seen his own pass away, and that, too, while in the hands of skilful physicians. The story so sweetly told, so unpretentiously, and such an every-day affair. What will our church members think of that? thought he. In connection therewith he thought of that scene of long ago where Elisha closeted

Digitized by Google

himself with the dead child of the Shunamite and restored him alive and well unto his mother. "Ah," but say some, "that was long ago, and that was Elisha. He was a man of God. We have no Elishas nowadays."

Ex Rae thought, too, of scenes nearer our own time. He thought of Christ, of his raising of Lazarus, and of the many, many restorations and cures effected by him, and of his command to his followers to do likewise.

"Ah!" but say some, "that was in Palestine. That was Christ. Those were his personal friends and disciples. That was the age of miracles. We don't have apostles nowadays. The age of miracles is past."

"Strange! is it not?" thought he, "these Christian Science people seem to think that America is full as good a land as Palestine—aye, vastly better; that there are in the world to-day full as good and as grand men of God as was Elisha or the prophets, or the apostles. That Christ is full as near to his followers now as he was to his personal friends over the water in those days long agone. That his words are imperative, his mode the same, and his help as powerful as it was then. That God is at their right hand; that His kingdom is within them. That it shall be their meat and their drink to do His will; and that they actually will be happy in the work, day in and day out, happy—with God close beside them.

The Troy (N. Y.) Record.

One Man's Enthusiasm.

"I WOULD shed my last drop of blood for Christian Science," said M. Scott Thompson. "I want to give my testimony for Christian Science, and I came to Detroit from Toledo to-day for the express purpose of doing so. At last I thought I couldn't spare the time, but my wife, God bless her, made me ashamed. She said, 'Didn't Christian Science save you? And can't you spare one day in its defense?' And I took the next train, and here I am."

Mr. Thompson came directly to the office of the *News-Tribune*. He is a hale and hearty man of perhaps fifty-five years of age. His face is of a healthy hue, and his hair and beard streaked with gray. His eye is bright and his tread firm and vigorous. That he should have ever been given up as a dead man on account of heart trouble is hard to realize. However, he tells the following story:

"I have been in the employ of the Detroit Soap Works for the past nineteen years. For four or five years previous to 1896 I had been very badly off with what the doctors called valvular heart trouble. I used to have terrible spells of prostration and hemorrhage, when the blood would flow out of my mouth and nose and run all over my shirt bosom. I tried to get my life insured, but no company would insure me. The doctors gave me no hope. I looked like a walking corpse and was just fit for nothing.

"Things were going on like this, when, one day in October, 1896, I fainted away in the office. When I revived, my employer, Samuel Post, told me to go home and not to come back there again until I was well. I went home, completely discouraged. My wife, in utter desperation, said, 'Would you try Christian Science?' I said I'd try anything. That the doctors had given me up anyway, and I could do no more than to die, at the worst.

"I went at once to Dr. J. P. Safford. We sat down opposite each other, and he silently prayed for my recovery. After an hour, when I rose to go, I felt as well as ever in my life. I asked the doctor when I should come again. He said there would be no need of coming again, that I was well and would remain well. I asked him what the charges were, and he said one dollar.

"I went home," continued Mr. Thompson, "feeling perfectly well. The next day I returned to work, and Mr. Post said to me, 'Now, what are you here for? Why don't you stay away until you are better?' I answered that I was all right, and that if I gave out again I'd go home and stay there. Well, I kept on improving at such a rapid rate that my employer became suspicious of me, and accused me of taking liquor to temporarily brace me up. It was not strange that he did think so, for my face, from the pallor of death had assumed a ruddy, healthy color, and my blood, which had before refused to circulate properly, seemed to flow through my veins as freely as though nothing had ever been the matter with me.

"So things went along until one day Mr. Post asked me point blank what I had been doing to myself, and I told him I had been taking Christian Science, and that I hadn't told him sooner because I thought he would only laugh at me. After that I had no trouble getting my life insured, and I have been well ever since.

"Now, some people say that when Christian Science cures a disease it is because the disease is purely imaginary. But I tell you that, when the blood flows out of one's mouth and nose and he faints away from weakness, it is not imagination. I would shed my last drop of blood for Christian Science."

Mr. Thompson also told of other cures in his own family, among which was that of a wound caused by running a nail through his little boy's foot.

"I was away from home at the time," said he, "and when the boy, nine years old, met with the accident, the neighbors told him to run quickly to the drug store and have the druggist attend to his foot. But the boy said no. He was a Christian Scientist, and his father would soon be home and would fix the foot all right. Now, that child demonstrated the Science right then and there; he had faith and the foot did not swell, nor inflame. But about two o'clock in the morning he awoke crying. We found that the foot had commenced to swell and was inflamed to a considerable extent. I gave him a treatment and he went off to sleep again. In the morning he was all right, and had no further trouble."

"How do you give a treatment, Mr. Thompson?" was asked. "Do you simply declare 'the law of health,' and keep at it?"

"That's just what I do," he answered. "I keep declaring it, silently or with my voice, and it works. I could tell you true stories of cures from now till to-morrow and not tell half that has come under my observation."

The *News-Tribune* communicated with Samuel Post, Sr., of the Detroit Soap Works, who corroborated Mr. Thompson's testimony in regard to his own cure, in nearly every detail and added that it was the most remarkable thing he ever heard of in his life.

Mr. Thompson's Detroit home is located at No. 378 Campbell Avenue, and his address in Toledo is No. 715 Adams Street.—*Detroit News-Tribune,* June 11.

The Kissing Bug.

THE kissing bug is a myth. There is no such creature in existence as the much-advertised *melanolestes picipes.* The whole thing is a hoax, started by some bright young newspaper men in Washington when there was a scarcity of real news, and swallowed by the gullible public as many a hoax has been before and will be hereafter. The Washington boys started the yarn as a hot weather fake to relieve the tedium of a summer with no Congress in session, and the enterprise of yellow journalism did the rest. Pictures of the mysterious bug have been published, and telegraphic dispatches have told of its serious, and occasionally fatal, ravages. And now the truth is out, and the public will have to laugh away its discomfiture at having been fooled again.

A Washington correspondent of the *Pittsburg Dispatch*

Digitized by Google

tells the origin of the kissing bug, but probably the exposure of the hoax will travel neither as far nor as fast as the hoax itself, and many people will continue to live in mortal terror of the winged osculator.

It was in the early part of June that the wonderful creature was first heard of. At that time many complaints were made to the police department of Washington by colored women, that a big colored man had stopped them on lonely streets at night and kissed them. In some instances the complaints said that the ruffian had bitten them on the mouth or cheek. The police tried hard to catch the colored man, but were unsuccessful. The policemen were worried, for the complaints continued, and the newspaper men and others began to make fun of the police department. At length, as a teaser for the officers, the theory was offered that the kissing of the dusky damsels was not done by a human being at all, but by a bug. This notion being duly discussed in Newspaper Row, it was decided to invent the kissing bug, a new entomological terror, and have a little fun with it during the hot spell.

Of course, it was necessary to invent a scientific name for the bug, and a gentleman who knew something of Greek invented the name *melanolestes picipes*. The vicious work of the bug was first tried on the country through some of the journals most susceptible to fakes, and it took immensely. It made a hit as a warm-weather story, and was received in many quarters with serious belief. A few days later the news was that it had been found to be the *melanolestes*. This clinched the story, and it was believed almost everywhere, except by really scientific men, who knew that there was no such insect. No one could have been more astonished than the newspaper men of Washington who started the yarn when they saw reports of the appearance of the kissing bug in the more northern cities sending its victims to the hospitals almost daily. Here was a singular feature of the affair. It was, of course, most singular to the gentlemen who knew that there was no such thing as the kissing bug. It began to appear like something else than simply a hot-weather joke. Pictures of the creature were published in several of the Eastern papers. These pictures represent a genuine bug, which is as harmless as a dragon fly, but as dangerous looking, and they gave many people the hot tremors, only to look at them.

It was an unexpectedly successful conspiracy to frighten persons in the hot weather and cause sleepless nights. The name *melanolestes,* which the newspaper men created, is from two Greek words, meaning "black bandit." It is not a word used in entomology, but it was a good one for the occasion. To be sure, it did not do much good to have a kissing bug without also having victims. This was not a hard point. There are insects which bite people, spiders and mosquitoes, for example, and persons can always be found with sore and swollen lips, and it is not hard for a newspaper man to exaggerate the swelling and make it any size desirable. The victims presented to the reading public by the originators of the yarn in Washington were unknown, and perhaps fictitious, colored persons. The story being well established in the national capital, it was pushed northward by the gentlemen in the conspiracy. The boys of Baltimore threatened to stop the fun, however. They would have none of it, knowing it to be a fake, and the kissing bug did not invade Baltimore and create hysterics there. The Washingtonians say that the newspaper men of Baltimore are entirely too conscientious for this world. The kissing bug, however, extended itself and carried its devastations northward into New Jersey and to Philadelphia and New York, and has worked into New England. The summer resorts have seen it. A supposed specimen or two has even been captured in this city and doctors have diagnosed its "kisses."

And now the bottom drops out of the whole hoax, and everybody will proceed to laugh. It was time to crush the kissing bug. He was making people nervous, and his effect was especially bad on hysterical women. The whole thing shows the power of journalism, and while all journalists may not be proud of this illustration of their power, it is to be wished that the press were never used for a worse purpose.—*Concord Evening Monitor.*

Miracle in India in Modern Time.

THE day of miracles is not ended—in India at least. A good old-fashioned marvel, strictly contradictory to the laws of nature as we know them, is reported from Benares. If Mrs. Besant, beholder of things invisible, were the chief witness, some might question whether more was not seen than met the normally constituted eye; but the whole performance was viewed at close range by a large party of English folk. They were presumably quite sane, for a physician, a lawyer, and a scientist were included, and a detailed description which has been extensively copied appeared in that eminently respectable periodical, the *Lahore Civil and Military Gazette*. So, sceptic, hold your peace.

The occasion, from the native viewpoint, was religious, but the preparations were like those for a barbecue. A trench fifteen feet long by four wide was prepared near Tagore villa. This was filled with logs and fagots, which were fired and allowed to burn all day. By evening the mass had become a deep bed of glowing coals which kept spectators at a distance and seemed hot enough to roast any sort of meat in short order. And meat was to be given it —live human flesh.

The visitors were provided with chairs and stationed on a mound of earth about eight feet from this blooming bed of "the red flower," as Kipling calls it. The searing heat would permit them to approach no nearer.

Then came a procession, with all the hubbub and tomtomery of Hindoo worship. Certain mysterious rites were performed and a number of cocoanuts thrown upon the coals, where they lay unconsumed.

Forthwith the two priests who were to be the leading performers became, to all appearance, possessed of the devil. They yelled like madmen and ran twice around the fiery pit. Then, barefoot and seemingly quite unprotected, they plunged into the incandescent mass and waded back and forth as children plough through the dry dust of a country road, kicking up red-hot coals and sparkling embers.

And now their frenzy infected the crowd. First two or three leaped down upon the scorching trail and followed in the wake of the priests. Then they rushed through by the hundreds, slashing the coals right and left, like cattle dashing through a ford. Among them were little boys scarcely five years old.

Even one of the Europeans present, so we are told, marched through after the mob, crossing several times. He described the sensation as "like walking over hot sand." Nobody was burned, and it was noticed that a turban which had fallen from the head of some devotee lay on the hot brands unharmed.

After the priests had withdrawn all were warned to desist. The inquisitive visitors now attempted to approach the trench, but the heat was still so fierce that it drove them back.

Such is the testimony of an eyewitness. Whereto it all tended is not made plain. The performance is left as purposeless as the gyrations of a whirling dervish.

That seems to be a characteristic of all these alleged Oriental miracles. They are mere puzzles. They astonish the beholder, but they lead to nothing.

Denver Republican.

Questions and Answers.

Is a Christian Scientist justified in remaining away from church services because he feels he can gain more by so doing?—A. C. S.

A true Christian Scientist will not consider merely his own personal welfare. The prosperity of the Cause and the good of mankind generally must be taken into consideration. The church services are a most important factor in the great work of teaching and demonstrating Christian Science. Each student of Science and Health has his part in this work and should see to it that he does his whole duty.

Perhaps the member in the pew does not fully realize how important is his part in preaching the Gospel. Having faithfully studied the lesson-sermon for the week, he has not only gained the letter thereof but likewise discerns somewhat of the spirit. He then takes his place in the congregation and adds his own individual testimony to the reality and power of Truth as it is brought out in the reading of the lesson. How much good is accomplished by this added testimony to the power and presence of Truth, he may never know, but of this he is fully assured that no effort, no matter how feeble, is ever lost.

The question then arises could he have gained more by remaining at home, even if he did spend the hour in faithfully studying the Bible and Science and Health? The present form of service is in harmony with the Principle and practice of Christian Science, and he who does his part to make this service what it should be, is obedient to the call of Wisdom, and the reward of obedience is earned.

By doing one's whole duty a higher and purer consciousness of existence is reached than can possibly be gained in any other way.

❧

If I just believe I am not sick, will that heal me? I have been told that all the Christian Scientists do is to simply say and think the patient is well.—An Invalid.

If the sick person has no other evidence than the testimony of the material senses he cannot believe he is well, therefore your question implies the doing of some impossible thing. One cannot change his belief without a reason for so doing. If the material senses say man is sick, and he accepts the statement as true, he will continue to believe he is sick until these senses testify to the contrary. But if, on the other hand, he is able to deny the testimony of the material senses because he has evidence from a higher source, he need not be held in bondage.

If he has caught even the faintest glimpse of the truth that God is the only Life, Substance, and Mind, that man is spiritual *now*, because he was created in the image and likeness of God who is Spirit, not matter, he has that which enables him to believe that the testimony of the material senses is false. Inasmuch as he sees that God's image and likeness is not subject to sickness, he knows that he has good reason for declaring he is well, even though the material senses say he is sick. Believing that his declaration is true, makes health real to him, destroys the sense of sickness, and he is healed. This result could not possibly follow if he did not believe that health is the eternal reality while sickness is the temporal falsity.

It is not enough for the sick man to *believe* he is well, he must go farther than mere belief and *understand* why he is not sick. This understanding is an effectual remedy.

There is a close connection between thinking and believing, and a still closer alliance between reason and faith. Some believe because they find it easier to do so than to think, while others believe simply because they have thought.—Rev. F. M. Bristol, Washington, D. C.

An Allegory.

BY ADELE HULL WOLFE.

Mortal man may be likened to a ship sailing on the sea of his beliefs, manned and officered by the personal senses, with self as the captain, and steering into the harbor of Christian Science, in which port all mortal-mind ships must anchor sooner or later.

When we arrive at the wharf of Love, then begins the work of unloading our cargoes—traits of character.

At first we are inclined to look about and remark upon the contents of our brother's ship, thanking God that our freightage is not such as his. But let us attend to our own labors, and, when the task is finished, we shall be very much amazed at the class of goods that we have been carrying.

When our ships are first launched for the voyage of life, the contraband goods are carefully stowed away in the hold; those marked "doubtful" go steerage, the homely possessions are assigned to second cabin, while the banner traits are proudly placed in first cabin, to be seen and known of men.

Some have a comparatively smooth voyage, thus presenting an appearance enabling them to pass with approval under the eye of the human Ship Inspector. Others are tempest-tossed, wave-beaten, and buffeted by angry gales. The first-class passengers become woefully seasick, creeping off below, weary unto death.

When they would at last return to their rightful place, they find themselves too feeble to wrest it from the hands of the ever sturdy "doubtful," "steerage," and "homely," who have taken possession in their absence.

When the billow-tossed wanderer finally signals for help, her colors are in the hands of these marauders,—the first to come forth when the ship has anchored. Let not, then, a favored ship spread sails, and blow whistles in self-salute to superior passengers. Wait. In this harbor of Christian Science is a searchlight called Truth, which we are each commanded to take into the very secret place of the ship's hold and search out every skeleton of error, every cobweb of doubt. When this is done, then it will be found that there is no excuse for saying, "I thank God that I am not as other people."

The trite old saying that human nature is pretty much alike the world over, takes on a stern reality when subjected to a careful analysis under the microscope of Christian Science, and reveals some wonderful, wriggling things in the drop of water called man, which to the naked eye seems pure and perfect.

As we clear our decks in this port, it is our blessed privilege to begin the relading of our ships from the storehouse of the harbor,—the Storehouse of Everlasting Life.

This is not alone a poetical fancy, but can be, and is proved every day. Point to a ship sailing under the true flag of Christian Science, and I will tell you what her cargo is. It is love, joy, peace, health, forbearance, meekness, humility, tender mercy, loving-kindness, faith, hope, and charity, "but the greatest of these is charity."

Out upon the high seas of life the brave ship speeds her way, seeking out those that have been lost in the fogs of error and crippled on the rocks of false beliefs.

One has a disabled rudder—rheumatism; another has defective air chambers—lung affections; a third, the engine wont feed—stomach trouble. The valves will not work in the pump—heart disease. The smoke stack is stopped up—asthma and bronchitis. And so on, through the whole list of human ills, so throbbing and pulsating is the ship that it seems indeed a living thing. Then the rescue ship's lantern descrys the wounded bark, and, above the voice of the storm, is heard the command to lower the life boat.

In this life boat of Love is borne the Master Carpenter

Digitized by Google

of Understanding, whose "Peace be still" calms the waves, sets the machinery in motion, and, all together, they go steaming away for the harbor of Good.

How do I know this? By their fruits, for, "By their fruits ye shall know them."

For What it is Worth.

SOME years since the writer had a dear friend, who was the wife of a doctor. It was my privilege to visit this friend often, and stay days at a time.

The doctor's office was in his house where he lived, so it gave me an opportunity to see some things in his practice, of which I will mention a few. I have seen castile soap made into pills. Soap pills and office fee, one dollar. Brown bread rolled in flour, set to dry. Box of bread pills and office fee, one dollar. Have seen Turkish rhubarb and charcoal mixed. Five small powders, one dollar. Can get the same for five cents of any druggist.

Could tell much more, but this should be enough to open our eyes.

Have seen that same doctor's wife bound hand and foot in bed with rheumatism, so relieved through Truth that she was able to ride out, get in the carriage herself, go out to the neighbors' to call. Then the doctor heard of a new remedy, and made her take it,—a "vapor bath." They stood with wine to her lips and camphor to her nose while in the bath. After the bath, she went to her bed, and lived but a short time.

This doctor passed away soon after his wife's death. When he was taken sick he would take no medicines, said they would do him no good. Did he have faith in medicine? He had been considered one of the best of doctors,—would cure where others failed.

MRS. JOSEPH BAKER, Providence, R. I.

Grateful for the Lesson Sermons.

HAVING a sense of great gratitude for "The Lesson Sermons," published in the *Sentinel,* I feel it is but just to acknowledge it. They came to me when I felt the need of just such help. I had been asking God to help me interpret the lessons. When the first article came, I realized that my prayer had been answered. How I read and reread it, and how it uplifted me, I cannot tell. This I do know, I prize them very highly and make it a point to study them each week with the lesson. I know that by so doing I have received great good.

I have received much help from Christian Science, having been raised from a chronic invalid to health, happiness, and prosperity. Surely of His fulness will we all receive and grace for grace.

MRS. ANNIE LANE, Long Branch, N. J.

"SEEING is believing." Not always. Standing at a railway station and looking up a straight stretch of track of about two miles, it occurred to me that an engineer who believed what he saw would shut off steam very suddenly, for he would see the rails approaching each other in a manner that would throw him off the track before he had gone half a mile. Why does he not stop his engine? Because he *knows* that the appearance is only an appearance; that the rails are really the same distance apart at the farthest point visible to him that they are immediately under his engine, and that he will keep the track safely.

When we *know* that, despite all appearances to the contrary, our track ahead is all right, that our senses are deceivers ever, and that all there is, is good and right, we shall push on free from care and fear, and come to a full realization of Harmony.—J. F. M.

A writer in the *Independent* has the following: "The Bible must not be studied for the purpose of upholding some system of theology, or ecclesiastical polity, or philosophy of life, present or future; but with an eye single and a mind open to the truth. The student must be as willing to unlearn as to learn."

President Harper of the University of Chicago is sceptical of the value of the ordinary Biblical instruction of the Sunday School. He thinks that many of the so-called "helps" are decided hindrances, because they often prevent young people from reading the Bible for themselves.

Boston Evening Transcript.

Do It. Say It.

IF you've any task to do,
Let me whisper, friend, to you,
Do it.

If you've anything to say,
True and needed, yea or nay,
Say it.

If you've anything to love
As a blessing from above,
Love it.

If you've anything to give,
That another's joy may live,
Give it.

If some hollow creed you doubt,
Tho' the whole world hoot and shout,
Doubt it.

If you've any debt to pay,
Rest you neither night nor day,
Pay it.

If you've any joy to hold
Near your heart, lest it grow cold,
Hold it.

If you've any grief to meet,
At a loving Father's feet,
Meet it.

If you know what torch to light,
Guiding others in the night,
Light it.

St. Paul Pioneer Press.

Notices.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this list is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

THE MOTHER CHURCH. BY JOSEPH ARMSTRONG. A History of the Building of the Mother Church, the First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address, $1.75; 50 copies to one address, $3.00.

The New Age of Progress.

Still Coming Marvels of Industrial Electricity.

"THE Age of Electricity is only just dawning," said Assistant Commissioner of Patents Greeley recently, "and one advance in this direction which we are about to witness is the conversion of the steam railroads of this country into electric railroads—a change that would have been accomplished already to a large extent, but for the immense amount of money invested in locomotives and the first enormous expense of installing an electric plant. Cars have already been run by electricity at a rate exceeding sixty miles an hour, and electric locomotives have proved themselves superior to those depending on steam power. One advantage of the electric locomotive engine is that it emits no smoke or cinders, and the water power of any river within a few miles of the line may be utilized, instead of fuel, to run it.

"The first electric road for city or suburban traffic was put in operation a dozen years ago; at present there are in the United States more than fifteen thousand miles of such roads, representing a total investment of $900,000,000 and employing about one hundred and seventy-five thousand persons. In 1880 there were only three electric light and power establishments in this country; to-day there are more than ten thousand such establishments, employing fifty thousand men and $500,000,000 of capital. The telephone in 1880 was just beginning to be commercially known; now there are over one thousand exchanges, using six hundred thousand miles of wire, and employing fifteen thousand individuals and $85,000,000 of capital.

✠

"These few figures give a notion of the wonderful progress made by the electrical art during the last few years of the nineteenth century. It has extended itself over the industrial field to such an extent as largely to modify social and economic conditions, incidentally giving gainful occupation to a vast number of persons. To-day the support of considerably over one million people in this country is derived from enterprises which depend upon electricity, and to this number there will be an enormous addition when electricity is substituted for steam as motive power on the railways.

"Electricity is invading all the arts and industries. The manufacturer finds it more economical to attach a motor to each of his machines, distributing power through his factory by means of wires. Coal is now cut in the mines by electric power, carried to the pit's mouth by the same agency, and loaded upon electric cars for transportation. The demand for copper for electrical uses is mainly accountable for the fact that the output of this metal in the United States has been multiplied by six since 1880. To make a telephone circuit from Boston to Chicago requires over one million pounds of copper.

"Many marvelous things are being accomplished with metals by the aid of electricity, among which may be mentioned the welding together of such substances as steel, copper, nickel, etc.,—a task that was deemed impossible until recently. With the employment of the electric arc a new chemistry of high temperatures is in prospect, promising fresh discoveries of high industrial value. By this means a heat of seventy-two hundred degrees Fahrenheit is attained, which is sufficient to reduce all known substances. Hence the electric furnace, in which gold, iron, platinum, and copper are volatilized, and by the help of which actual diamonds have been manufactured from charcoal.

✠

"Already we have learned how to send seventy-two messages simultaneously over a single wire. We can transmit the handwriting of an individual by telegraph, and in the same way we can actually reproduce half-tone pictures at long distance. Before long we shall be able to reproduce full typewritten pages by telegraph, just as we now send word on a paper ribbon, and wireless telegraphy seems to be in sight. When the proposed Pacific cable is laid, it will be practicable to send a message around the world in three seconds, and it is promised that a method will be found for telegraphing between ships many miles apart at sea. Even now it no longer seems so very wonderful that, by the touch of a button at the Naval Observatory in Washington each day at noon, one hundred thousand clocks all over the United States could be set to the true time, while time-balls are dropped at the same instant at all seaports on the Atlantic and Pacific coasts for the benefit of mariners.

"The great problem likely to be solved in the twentieth century is the transformation of heat into electricity direct. When this is accomplished, Biddy in the morning will start a fire, the heat of which will fill a series of storage batteries that will do most of the work of the household during the day, illuminating the dwelling, propelling the machine fans, running the sewing machine, operating the dumb waiter, and so forth. This, however, is only a faint suggestion of the advantages to be gained by the discovery I speak of. Electricity will then become an exceedingly cheap source of energy, and the sun's rays even may be employed to manufacture the fluid. If, as does not seem unlikely, a twentieth-century inventor finds a practical way of harnessing the tides, the latter will produce at very slight expense all the electricity required to run all the machinery

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

and to heat and illuminate all the houses in the United States.

"The houses of many rich men to-day are run to a great extent by electricity, which lights them, ventilates them, and even operates the family elevator. This kind of elevator is itself a very new invention, it has no attendant, but is controlled by the invisible force stored in great jars of lead and acidulated water in the battery-room that is as safe and docile as any well-trained servant. Anybody who wants to make use of it presses a button, and the car comes responsively to the floor desired. Stepping aboard, the passenger touches one of a series of buttons inside, and the car transports him to the floor he wishes to go to. If the promises of electrical experts are to be accepted, our dwellings before long will be lighted by electricity without wires.

"Street cars are not only run by electricity, but are illuminated and heated by the same agency. The heaters used for this purpose require no attention, regulate the temperature exactly as it may be wanted, and, when used on railway trains, do not endanger the safety of passengers. One of the latest improvements is to provide each berth in a sleeping-car with an incandescent light, so that one may read, if slumber comes not. Similarly, incandescent lights are now provided for carriages, and they are even coming into use for cabs. The Emperor of Germany has his closed carriages lighted in this way, and, in addition, the harnesses of his horses are covered with small glow-lights, of different colors, so as to produce a very beautiful effect.

✙

"The twentieth century will see electricity introduced in the kitchen in place of coal and wood. In order that this may be accomplished, it is only necessary that the fluid should be made a little cheaper, inasmuch as it serves much better for all culinary purposes. The electric oven bakes bread ideally, and meats prepared in it do not require basting or watching, while broiling or frying may be done in superior style on the electric range. The electric chafing-dish is attachable at a moment's notice to an ordinary light wire; the current is turned on, and immediately the oysters begin to stew or the eggs to frizzle. In the electric kitchen of the near future there will be no coal, no ashes, and no smoke; there will be no fuel, and not even a battery, inasmuch as the requisite current will be furnished from outside, as gas is now. The sad-irons used on Tuesdays for the family linen will be heated by electricity, and will be kept thus at a constant temperature, so that they will never scorch things and will not require changing or reheating. Already we have electric curling-tongs, which, being hitched to a light-wire, are warranted not to singe the hair.

"Electric boats are now plying on the canals of Venice, and launches similarly propelled are being made for American warships, the power being derived from storage batteries beneath the seats. The trolley, meanwhile, threatens to supplant the industrious but uncertain mule for the propulsion of canal-boats. In the cities canned electricity, as it might be termed, is now delivered to consumers, the emptied batteries being taken away every day and replaced with full ones. At the same time, agricultural machines run by electricity are being introduced to the farmers, and there is even a device for the wholesale electrocution of weeds. Among recent inventions are an electric churn and an electric incubator, and experts are making experiments in the forcing of the growth of plants by electric lights and by currents put through wires underground."

Boston Transcript.

Items of Interest.

The funeral services of Colonel Robert G. Ingersoll took place at Dobbs Ferry, N. Y., Tuesday afternoon, July 25, 1899. Flowers of all kinds were in profusion. The service was very simple and unusual. No prayer was offered. The exercises consisted simply of reading from the writings of Colonel Ingersoll, his last poem, "The Declaration of the Free," "My Creed," and his oration at the grave of his brother two decades ago.

About two hundred of the Postal Telegraph Company's messenger boys in New York City went out on a strike demanding that a flat rate of two and a half cents be paid for each message delivered and likewise for returned messages they are unable to deliver; also that the levying of fifty cents a week on each boy for clothing shall cease, and that the boys be permitted to purchase their own clothing.

Ambassador Choate said in a recent speech that he believed no question could ever arise between Great Britain and the United States to interrupt the constant peace which had held them together during the last eighty-five years. He also said he believed they would cultivate the same spirit of civilization, justice, and freedom which is the real foundation of both governments.

About twenty-one thousand dollars have been secured for the purchase of a house for Admiral Dewey. It is now reported that he has signified his willingness to accept it. There has been an impression that the comparatively small amount of the fund was due to the thought that Admiral Dewey was averse to accepting the testimonial.

England won five events in the international inter-university games at London, July 22. Oxford won the quarter-mile, the half-mile, the mile, and the three mile races, and the broad jump. The Cambridge athletes won the hundred yard race, the hurdles, the high jump, and the hammer throwing contest.

Proceedings have been instituted by Admiral Dewey in the District of Columbia Supreme Court to gain for himself and subordinates, as prize money, an amount equal to the value of the entire Spanish fleet sunk at Manila, and all the supplies taken therefrom. The amount claimed is about $790,000.

The long pending reciprocity treaty between France and the United States has at last been signed. The negotiations, which were begun nearly two years ago, will result in placing the products of the United States on the same basis in France as the products of Great Britain and Germany.

During the last fiscal year the millers of the United States exported over eighteen million barrels of flour, representing over eighty million bushels of wheat. This is the highest record in the history of the industry. Ten million barrels were shipped to the United Kingdom.

Secretary Long has issued orders for the appraisement of the ships of the Spanish fleet destroyed at Santiago. This action is for the purpose of fixing the amount of prize money that has been or may be claimed by the officers and men of the American squadron.

Marshall Field, as an individual and a member of the firm of Marshall Field & Co., will pay two hundred and fifty thousand dollars in taxes in Chicago this year. It is believed that this is the largest amount assessed against any individual and firm combined.

The Farmers' National Congress will meet in Boston, October 3–6. The congress is a non-political body, and its object is to advance the interests of agriculture. There will be sixteen addresses including one by Secretary of Agriculture Wilson.

An invitation will be sent to the governor of each state inviting them to send a portion or the whole of the national guard and militia of the state to take part in the land parade in New York City upon the arrival of Admiral Dewey in October.

The *London Times* says the American delegates to the Peace Conference are held in high esteem by the whole conference on account of the manner in which they have succeeded in smoothing away friction and conciliating conflicting views.

Brigadier-General Thomas H. Anderson, commanding the Department of the Lakes, says, "The greatest statesman in this country should be made governor-general of the Philippines, and the military authorities subordinated to him."

President and Mrs. McKinley are enjoying a short vacation at Lake Champlain, N. Y. The President said to an Associated Press correspondent that he had made no plans for his stay, except to get as much rest as he could.

The gold reserve in the United States treasury has now regained all that was lost by the Philippine payment of twenty million dollars. Gold is pouring into the treasury at a rapid rate and a scarcity of paper is the result.

Italy will be paid an indemnity for the lynching of three Italians in Louisiana. The state department has decided that an alien does not become a full-fledged citizen until his naturalization papers have been issued to him.

The State Board of Arbitration has practically abandoned its efforts to settle the difficulties in the Cleveland, O., street railway strike. The rioting still continues. One man was killed by a bullet fired by a conductor.

Information is received that C. S. Johnson, judge of the United States Court for the District of Alaska, has departed on his tour of the Yukon. He will appoint judges for all the principal American Yukon towns.

Judge Mazeau, president of the Court of Cassation, is reported to have said to President Loubet in regard to the Dreyfus case, "Amid all the evidence submitted to us, we did not find sufficient proof to establish guilt."

President McKinley has been asked to make some provision by which a railroad might be established from Santiago de Cuba to Santa Cruz with connections for Havana and the principal harbors of the island.

The Westinghouse Air Brake Company has secured a contract from the Russian Imperial Railway Commission to equip all its cars during the next four years, with Westinghouse automatic air brakes.

The entire fleet of the world is 28,180 steamers and sailing vessels, with a total tonnage of 27,673,528. Of the total, thirty-nine per cent is British, while the second largest number of vessels is American.

It is stated that President McKinley is negotiating for the purchase of the cottage in Canton, O., where he began married life thirty years ago, and where he resided during the campaign of 1896.

A new six-inch quick-firing gun has been manufactured by the Maxim Company for the United States Navy. A recent trial shows that it will perforate steel armor seventeen inches thick.

The report of casualties in the Philippines from June 30, 1898, when the first military expedition landed at Cavite, to July 4, 1899, shows the number of deaths, 689; wounded, 1,591.

A Russian has invented a system of wireless telephone, and is introducing it into England. He declares it is possible to use it between England and the United States.

Mayor Van Wyck has received a cablegram from Admiral Dewey saying that he expects to arrive about October 1, and accepts the invitation to be the city's guest.

The Bank of Spain will be authorized to raise its circulation to five hundred million dollars. Loans will be made to the government at two and a half per cent.

English capitalists have purchased five million dollars worth of oil land in Ohio and Indiana, with a view of competing with Russian petroleum in London.

Over a thousand volunteers in the Philippines have reenlisted. General Otis says he might raise an additional regiment among the volunteers.

The date for the opening of the court-martial of Captain Dreyfus has been set for August 7. The daily sittings will be from 6.30 A.M. until noon.

A native Catholic priest is at the head of a movement to make the Church of the Philippines independent of the Spanish priesthood.

Nearly five thousand men, which is about one third of the number required, have enlisted for the volunteer army in the Philippines.

An English chemist has invented a new explosive which is said to be more destructive than dynamite and less dangerous to handle.

Over five hundred damage suits for overcharging have been filed against the Western Union Telegraph Company in Kansas.

The Yale-Harvard athletic teams were entertained by the United States Ambassador Choate at his residence in London.

General Joseph Wheeler and his daughter sailed from San Francisco for the Philippines, July 24, on the transport Tartar.

The citizens of Detroit are preparing to give Secretary Alger a royal welcome upon his arrival home.

The merchants of Havana believe that immediate independence for Cuba would work disaster.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

"Peace, be still!" our Father is at the helm.
MARY BAKER EDDY.

Ingersoll and Theology.

THE death of Col. Robert G. Ingersoll has brought out expressions from some theologians, which, taken as a whole, furnish an interesting index to present theological views and opinions. These views and opinions are as diverse as they could well be. Some theologians are harsh and unsparing in their criticism of the great agnostic; while others are most kindly and considerate. These differing views draw a very sharp line of distinction between what is called old theology and new theology; or in other words, what is termed illiberal and liberal theology.

The Rev. Dr. R. Heber Newton, speaking of Mr. Ingersoll from his pulpit as long ago as 1885, is reported as having said:—

"Whatever destructive work he does is constructive in this at least, that he would build up happy homes and plant within them men and women living sanely and nobly. . . . Further than this let me frankly own to you that I believe Mr. Ingersoll, in his rough attacks upon religion, is doing a real service to the cause of enlightened religion. . . . Consider what is meant by such a system of thought as Calvinism. Consider what awful blasphemy the doctrine of hell really is. Consider what a fetich men have made out of the Bible."

A number of clergymen expressed their views upon the question of Ingersoll's chance of salvation. From some of these we briefly quote.

Rev. Dr. Stafford of St. Patrick's Church, Washington, said, "Poor Bob Ingersoll. I hope he was honest. If he was, there is a chance for him."

People are coming more and more to believe that the doctrine of eternal punishment has been almost abandoned by theologians. Dr. Stafford evidently is not of this class, if his words are to be taken for what they would commonly be understood to mean, for, according to Dr. Stafford, if Ingersoll, though an infidel or agnostic, were honest, there is a chance for his after-death salvation. The converse of this is, that if he were not honest there is no after-death chance of his salvation. This, then, is a re-affirmation of the doctrine of eternal punishment or everlasting damnation. To what extent this theologian represents the views of his theological brethren it would be interesting to know.

The Rev. Daniel I. McDermott, rector of St. Mary's Roman Catholic Church, Philadelphia, evidently does not go so far in his views of eternal punishment as some of his brethren. He said:—

"I do not think God held St. Paul personally responsible for his acts while persecuting the Christians. God condemns no man who supposes he is in the right, nor do we hold children guilty for sins of innocent ignorance."

The Rev. William B. Bodine, rector of the Protestant Episcopal Church of the Saviour, Philadelphia, said:—

"I do not know why an agnostic, if honest in his beliefs, should not enter the kingdom of heaven."

This statement is somewhat equivocal. Whether or not if dishonest, an agnostic, or other person, would be forever debarred the kingdom of heaven, does not appear in the statement of this clergyman. A fair inference, however, would be to the latter effect.

The Rev. Charles W. Bickley, of the Mariners' M. E. Bethel, Philadelphia, said:—

"I cannot believe that the all-merciful Father will punish His erring children when they unknowingly disregard His divinity. Ingersoll's many good acts and strict moral life will plead with Him who abundantly pardons."

This theologian would seem to be willing to give Mr. Ingersoll a chance of salvation, yet his words, literally construed, would imply an existing belief in the possibility of eternal punishment.

The Rev. Horace Porter, assistant pastor Plymouth Church, Brooklyn, said:—

"Regarding the future of Colonel Ingersoll's soul, if he had a chance he has it yet. If he was not honest in his convictions he will now have the chance to be honest. I believe the future world may give him, as it may to us all, clearer light and a larger opportunity to know and love the truth."

The Rev. A. A. Berle, Congregationalist, of Brighton, Mass., said:—

"Colonel Ingersoll was a brave, chivalrous, high-hearted man, resolute in his championship of what he believed to be true. Infinitely more to be respected than certain clerical infidels, who discredit both the Bible and the gospels by covert insinuations. Peace to his ashes."

The Right Rev. James A. McFaul, Bishop of Trenton, said:—

"If he was sincere in his belief, and lived a moral life we are allowed to hope that God has shown him mercy."

What if he were insincere in his belief and were immoral at the time of his death? The plain inference from the bishop's remarks is, that in the latter event there would be no hope that God would show him after-death mercy. Here, then, is another affirmation of the doctrine of eternal punishment.

These opinions, as we have said, no doubt fairly reflect the common theological views, and emphasize the difference between the differing schools. The preponderance of opinion would seem to be in favor of after-death salvation and against the doctrine of non-probation.

If theology could be prevailed upon to accept the true definition of God and man, as set forth in the history of creation, contained in the first chapter of Genesis, it would no longer vex itself over the question of man's status after death. This chapter of Genesis distinctly declares that man is God's image and likeness. It does not state that he was God's image and likeness in the past, or that he will be in the future, but that he *is* God's image and likeness. This is the announcement of an eternal fact. It was as true before the morning stars sang together as it was when the first chapter of Genesis was written, and is as true now as then.

God is Spirit; therefore His image and likeness is spirit-

Digitized by Google

ual. According to Genesis, then, man is spiritual and not material. Spirit and its spiritual creation is forever inseparable. This being true, man, as the spiritual reflection or image and likeness of God, Spirit, can never become less than spiritual. He can never lose his true estate. He can never become lost either to himself or to God. God as Love is Infinite, and no idea or reflection of infinite Love can lose itself in infinity or get beyond its reach.

The whole doctrine of salvation or probation is summed up in the following paragraphs from the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, page 466:—

"God is the Principle of Man; and the Principle of man remaining perfect, its idea, or reflection,—man,—remains perfect. Man is the expression of God's Being. If ever there was a moment when man expressed not this perfection, he could not have expressed God; and there would have been a time when Deity was without entity, Being. If man has lost perfection, he has lost his Principle, or Mind. If man ever existed without a Principle, or Mind, then his existence was a myth.

"The relations of God and man, divine Principle and its idea, are indestructible in Science; and Science knows no lapse from or return to harmony, but holds the divine order, or spiritual law, to have remained unchanged in its eternal history, wherein God, and all which He creates, are perfect and eternal."

Could or would the theological world but study this definition of God and man with unbiased thought, the mists would speedily clear away, and the sunlight of eternal Truth flash into its consciousness.

In the light of this definition, which is based wholly upon the true spiritual interpretation of Scripture, there is no question as to the present status of the individual who was known to the world as Robert G. Ingersoll, any more than as to that of any other of God's ideas or children.

Says the *Christian Register*:—"It shows the difficulties which beset our struggling church at Chattanooga, Tenn., that its minister feels compelled to publish a sermon showing Rev. Sam Jones as a mountebank in the pulpit. When this notorious revivalist comes North and attacks Unitarianism, his presence is scarcely felt. A black fly in the woods would be a more formidable antagonist."

We know of some who occupy about the same relation to Christian Science that the *Register* says Mr. Jones sustains to the northern Unitarian Church.

Every one who is healed in Christian Science is made better morally. Can as much be said of doctors' patients? It is a notorious fact that medical treatment is frequently responsible for the acquirement of the liquor, morphine, and chloral habits, by persons who were morally pure before resorting to the physicians.

Christianity is the science of perfect being. It cannot be understood in theory unless the student works up to a higher standpoint through demonstration.

Those who are opposing Christian Science are reckoning without their host; their Host is God.

If one makes a misstep and falls into the Slough of Despond, as did Christian in that marvelous allegory of Christian experience, "Pilgrim's Progress," let him be sure that he scrambles up on the right side,—that is, with his face toward the little wicket gate and the "Sweet Beulah Land," even though there be lions in the way, for they are chained.

Thinking people are awakening to the fact that the Bible is a revelation to human consciousness of God as Love, rather than a theological treatise.

All who have awakened to the consciousness that thoughts are veritable things, must be watchful. A house divided against itself is never secure. The errors may seem small and well disposed toward the rest of the household, but they will open the doors wide to all the other errors, big and little. If possible, every thought should be made to give a good account of itself before it be allowed to enter the mind.

The teachings of Christian Science in regard to sin are very practical. Those who think they can lull conscience to sleep by declaring that there is no reality in sin, are mistaken. Christian Science requires the abandonment of sin as a proof of the declaration of its unreality. This requirement is in no case relaxed until sin be destroyed.

No one who is wise will rest his expectation of enduring happiness on anything he knows to be temporary.

That evil is the most dangerous which seems to be good.

Christian Science declares that there are no incurable invalids, no hopeless drunkards or opium-eaters, but that all may be and can be free from sin and disease.

So long as people credit God with the authorship of sickness and all the other forms of human misery, and submit to disease and calamities in the belief that they are pleasing God, they need not expect relief.

Implicit trust in God, with the understanding that He is not the author of sickness and discord, heals disease.

Colonel Ingersoll's Life in Epitome.

BORN in Dresden, N. Y., August 11, 1833. Nearly sixty-six years old.

His father, the Rev. John Ingersoll, a poor, wandering Presbyterian minister, removed to Ashtabula, O., in 1841. There Robert G. Ingersoll attended a Presbyterian Sunday School.

In 1843 they removed to Madison, O., and thence two years later to Shawneetown, Ill.

He was educated in the public schools of Shawneetown, studied law there and was admitted to the bar in 1855.

Began practice with his eldest brother, Eben Clark Ingersoll.

Removed to Peoria, Ill., in 1857.

In 1860 he was nominated by the Democrats for Congress and was defeated, although he cut into the national Republican majority.

In 1862 he went to the front as colonel of the Eleventh Illinois Cavalry; was idolized by his men, and served his country gallantly.

In 1862 also he married Miss Eva Parker, the daughter of a farmer of Groveland, Tazewell county, Ill. Two beautiful daughters were born to them and survive with the widow.

Digitized by Google

In 1863 he joined the Republican party.

In 1866 he was appointed attorney-general of Illinois.

In 1868 he was spoken of for Governor, and his name was presented to the Illinois state convention, but his heterodoxy, which made him the enemy of half the clergy of the state, caused his defeat by the nomination of General John M. Palmer.

In 1876 he became famous throughout the country by his speech in nomination of James G. Blaine for the presidency.

In 1877 Ingersoll declined the ambassadorship to Germany, which President Hayes offered him.

In 1878 he removed to Washington and gained a world-wide reputation as an advocate.

In 1887 he removed to New York and was admitted to the bar there. On that occasion he declined to be sworn, and affirmed, in lieu of the customary oath.

Retired nominally from active law practice in 1897, but continued in special cases almost until the time of his death, as counsel in consultation.

It is understood that he was about to re-enter the active practice of law this coming fall.—*Boston Post.*

My Creed.

THE following is from the writings of Colonel Ingersoll.

To love justice, to long for the right, to love mercy, to assist the weak, to forget wrongs and remember benefits, to love the truth, to be sincere, to utter honest words, to love liberty, to wage relentless war against slavery in all its forms, to love wife and child and friend, to make a happy home, to love the beautiful in art and in nature; to cultivate the mind, to be familiar with the mighty thoughts that genius has expressed, the noble deeds of all the world; to cultivate courage and cheerfulness, to make others happy, to fill life with the splendor of generous acts, the warmth of loving words; to discard error, to destroy prejudice, to receive new truths with gladness, to cultivate hope, to see the calm beyond the storm, the dawn beyond the night; to do the best that can be done and then be resigned—this is the religion of reason, the creed of science. This satisfies the brain and heart.

Can Afford to be Just.

THE closing days of the nineteenth century are the days of women's achievement, but in all the remarkable record of the end-of-the-century woman there is perhaps no name that just now stands out more prominently than that of the quiet woman of Concord, N. H., whose thought directs the actions of thousands of followers throughout the country, and even throughout the world, Rev. Mary Baker G. Eddy of the Church of Christ, Scientist. Ever since the gathering of her followers in the Mother Church in Boston a few weeks ago, there has been manifest an increasing interest in these people and their works, and this has been increased many fold by the attacks of the medical practitioners of the country, who, it seems, are somewhat alarmed over the wonderful spread of the movement, and, for some reason or other, are aroused to offensive action against the cult.

There have been prosecutions and threatened prosecutions in various parts of the country directed against these so-called faith curists, but for the present the whole agitation has focussed in New York state, where the Medical and Legal Relief Society, as the association of old-line practitioners is called, have inaugurated an energetic crusade against faith cures and are endeavoring to enlist the sympathies of the public, professional and non-professional people alike, in support of a statute that shall be directed against the practising as healers of any except those who make use of the formulas and practices known to the medical profession. In fact, the attempt is to crush out of existence by law this religious body whose members are combating, it must be admitted with a degree of success, the generally accepted theories of disease. There promises to be a battle royal over the issue, and the interest in the result reaches all over the Union, but nowhere will it be more real than in Massachusetts, the cradle of Christian Science, and the home of so many of its followers to-day.

There has been evidence plenty in the past few months that the followers of this theory of health and Christian living are not few, by no means insignificant, and there is no indication of any faltering on their part in the face of the attack that has been made in the press and on the platform on all sides, but rather an invitation to examination. It is noticeable as well that the Scientists count among their number many men and women of notable education and influence, and are not wanting in able defenders, who, if they do succeed in dazing you with the intricate word combinations which they declare to be truths, are also able to compel the admission that the religion of the Scientist has much of reality. The issue has been discussed in the sessions of the New York society, the debate being notably free from prejudice, and now a committee of the society is to conduct a further investigation and determine upon a plan of action.

The majority of the people fail to understand Christian Science, perhaps have not yet reached the point in their spiritual development where they can understand it, and when they are told that disease and pain do not exist, are inclined to doubt and to denounce the entire teaching as ignorant fallacy, actually criminal in its practice, which should be stopped by the arm of the law. The *Gazette* does not propose to come to the defense of Christian Science, in fact, pleads its inability to fathom its depths or to understand its doctrine, but is willing to recognize, nevertheless, that there is something in its preaching and its practice, and believes that in the great majority of its membership there is a following of the life of the Nazarene that some of the devotees of other faiths might do well to emulate. At the same time it recognizes the fact that human life is sacred, and that the protection of life is one of the functions of our legislatures and of our courts, even though a man is willing for one cause or another to give up that life.

To recognize the good and to strike at the evil, to honor the liberty of men, and yet conserve the safety of life, is a problem that requires careful handling, and one that ought to be approached free of prejudice. Thus far the New York society has conducted its investigations in a manner that deserves the commendation of all, and it is to be hoped that their future investigations will be characterized by the same carefulness and candor, and that the public will grant the issue the same fair treatment. The Scientists can rightly claim credit for successful work, and in assailing them it must be remembered that the secret of eternal life on this earth has not yet been discovered, and that the practitioners of the old school yield often to the grim master, death. The most of us are not ready as yet to accept Christian Science as the only and complete gospel of life and health, but the unprejudiced mind is willing to concede much to its practice and for the present hold judgment in abeyance.

Christian Science in Colorado.

IN connection with the agitation in New York and Pennsylvania against the freedom to apply the principles and methods of Christian Science, and the efforts to secure legislation against that school, a letter from the attorney-general of Colorado to the New York *Tribune* is of considerable interest. It contains some facts and a salutary warning.

The late general assembly of Colorado passed an act to prevent the practice of Christian Science. We understand that the inhibition was not direct, but insidious and adroit. The regular and the homœopathic schools, otherwise at war, joined hands over the chasm and forgot all their differences in the endeavor to stamp out the new school. The bill, however, was vetoed by the governor. He thought the new science ought to have an equal opportunity with the others to demonstrate its efficacy and soundness.

Mr. Campbell, the attorney-general, approves of the governor's veto and agrees with the reason assigned for it. He is not himself a convert and owns to ignorance of the teachings of Christian Science, but he takes the ground that medicine has not established itself as exact and absolute, and that its votaries ought to be hospitable to new theories and tolerant of new beliefs. Experience alone can show how much good there is in the new school and to what extent the old practice is better—if it is better. For the state to intermeddle and suppress a new school by law simply because it is new and denounced as heretical would be both folly and outrage.

The community has but one duty in the premises and a correlative right. It is bound to protect the lives and health of its members. It is bound to prevent the spread of contagious and infectious diseases. All schools, old or new, must submit to regulation looking to such prevention. No alleged doctrine can justify disregard of such rules with regard to notification and isolation. But the adult and responsible individual cannot be told what physician to call in and what remedies to take in case of illness. That is his own concern, and he should have the liberty to act upon his own desires and convictions.

The efforts for legislation against Christian Science are vain. Even if laws were passed, juries would never enforce them. But legislatures and executives may be trusted to dispense juries from the unfortunate necessity of refusing to give effect to statutory prohibitions. The New York Medico-Legal Society which held a "great" meeting the other night at the Waldorf-Astoria to discuss a bill against the faith healers, should take this to heart. No bill will pass, no law will be enforced which makes it a crime to advise men to call in mental healers or to dissuade them from employing a regular physician.

Chicago Post.

An Atheist's View of Christian Science.

IN these days, there are all sorts of views of Christian Science. Some very intelligent and well-informed people believe in it implicitly. Some think "there is something in it," but they cannot swallow it all, and some reject it *in toto*—some for one reason and some for another. The orthodox clergy object to it because they say it is un-Christian, and the orthodox physicians object to it because, as they allege, it is unscientific; but now here comes the editor of an atheistic paper—the *Truthseeker*—in New York, who, while he objects to Christian Science on general principles, takes the orthodox to task for opposing it. Amongst other things, he says,—

"The present semi-crusade against so-called Christian Science is a most inconsistent movement on the part of Christians who are making it. Not that the superstition does not need denouncing, and its victims enlightenment, but the Christians are not the ones qualified to do it.

"The other day the Medico-Legal Society discussed 'Christian Science and the Law.' Several medico-legal gentlemen argued in favor of legislation against the cult, but the devotees of the superstition had no difficulty in defending it on Bible grounds. The New Testament and Christ's teachings and example were their authority, and admitting the truth of the Christian theology the opponents of the cult were hopelessly in error.

"The fact is, Christian Science, which ought to be called Christian Superstition, is one of the logical deductions from Christianity. Christ is alleged to have healed by miracle, or through the spirit or will of God, instead of by natural means. He laid his hands upon a few sick folk, and healed them.

"These teachings are as authoritative as any part of the Bible teaching, and how can Bible believers consistently reject them? Their opposition to the Christian Scientist puts them in the attitude of saying to the world, 'The Bible is all right as a theory but it wont do to practise what it teaches.'

"Such an attitude is dishonest in view of the claims made for the book and the religion based thereon."

Duluth (Minn.) Tribunal.

An Attorney-General's Opinion.

To the Editor of *The Tribune.*

Sir:—The Legislature of this state, at the last General Assembly, passed a bill which, as I understand it, was to prevent the practice of Christian Science healers.

My impression is that the old line doctors and the homœopathic doctors in this state joined hands over the bloody chasm which has long existed between the two branches of the medical profession to throttle the new science, and, as our Governor thought that the medical profession up to this time had not yet reached the dignity of a science, and that the union of the two lines of physicians was for the simple purpose of warring against the third, which, in their eyes, has become a monster of great proportions in this state, he took it upon himself to disapprove the bill and give them all an equal opportunity in this state to demonstrate to the people the power of healing by calling upon their respective gods.

Personally, I know very little about Christian Science. I share in the general opinion that as yet its demonstrations have not been very favorably considered by a great majority of the people, but since the old line doctors and the homœopathic doctors of this country, who have been trained for the purpose of teaching the people to avoid evils, have become so demonstrative against this new field, I am inclined to hope that the new giant will be permitted to try his sword with the old. The very fact that scientific men of the two schools named are making such a war upon this new evil is certainly enough reason for the people to stand by and allow it to demonstrate its ability to cope with the old, and if it should eventually demonstrate the fact that it possesses any virtue the new developments will benefit mankind, and I assume that scientific men of either of the older professions will accept the good and seek to demonstrate that, in some things, at least, the old science is better. DAVID M. CAMPBELL, Attorney-General.

Denver, July 7, 1899.

Current Religious Items.

Is this generation of Christians unspiritual? We have been asked this question. Signs that this is an unspiritual age are often pointed out: the fewness of additions to the churches, declining attendance at public worship, growing indifference to the Lord's Day, vanishing family altars, decrease of private devotion. An English bishop, after a recent visitation of his diocese, found evidence that interest in the churches had fallen off extensively during the last twenty years. He noted three chief causes: devotion to amusements, ambition to increase property rather than to improve character, and engrossing interest in secular studies with the chief purpose to get gain through better disciplined minds. He thought the public schools fostered this aim. It will be conceded by many that the controlling desire of the Christian world to-day is not to attain to the spiritual life.

What is spirituality? It is seeing and knowing God, who is a spirit. It is living under the control of the impulses which guided the Son of God in the flesh. Paul was a profoundly spiritual man because his constant experience was described by his saying, "I live: and yet no longer I, but Christ liveth in me." Spirituality depends on the sense of the reality of the spiritual world. When the commands of God, His revelation, and even His existence, are subjects of speculation, the life cannot be illumined by His presence or responsive to it.—*The Congregationalist.*

Weary of the Mystery.

I shall ask you to turn, for the present, from the human to the divine side of our work—from our use of the power which God has entrusted to us as His ministers and deputies to His use of it for the advancement of His kingdom on earth.

It is the property of true religion to draw us into perfect sympathy with God; His cause becomes ours, and ours, in turn, if right, becomes His. Our concern for His glory is the measure of our piety. But this sympathy and concern often betray us into impatience and misjudgment. Things are out of joint. . . .

Now, even the most patient and trustful among us at times grow weary of the dreadful mystery of the two-fold advance of good and evil. They are confounded by this strange and universal interlocking of the hosts of God and Satan. They see with dismay that the weapons ordained of God often fail of their purpose, and that the tide of conflict rolls adversely across His own centres of power. When thus wearied, confounded, and dismayed, the child of God cannot help, now and then, crying out, "Arise, O God; plead Thine own cause." Stir up Thy strength and come among us. Setting aside all intermediate instruments—Churches, Scriptures, Priesthoods, Sacraments—make bare Thine own arm in the strife, breathe upon and reduce this consuming fever of a disordered earth. Touch with Thine own hand the secret springs of its life and make them pure.

Extract from BISHOP LITTLEJOHN'S address published in *The Churchman* (Episcopalian).

Witnesses for God.

In the court of justice it frequently happens that the witness is an insignificant individual, insignificant judged by his personal attainments or by the breadth of his knowledge. Yet this person, so insignificant in himself, may be the most important, after all, in the court room. And he is important only when he knows his own limitations and keeps within them. The witness who aspires to a reputation for omniscience, who argues, who theorizes, is lost. He is confronted by men of greater ability in these directions, men of larger experience and finer skill. But if the witness, in his simplicity, tells only the thing which he himself has seen and known, if, careless of the remoter consequences or of the construction that may be put upon his words, or of the mere appearance of plausibility or completeness in his testimony, he tells the plain truth that has come within his knowledge, then he has a position that is impregnable. He may be narrow-minded or childish in his thought, weak perhaps in his judgment, yet may tell some truth which all these wiser men must reckon with. It is not his business to explain that truth; it is not his business to apologize for it. There it stands, and all the elaborate theories which ignore it must fail.

REV. SAMUEL M. CROTHERS, D.D., in the *Christian Register* (Unitarian).

From the Letter to the Spirit.

The *Christian Register,* in a paragraph account of a private celebration of the seventieth birthday of Dr. Charles Carroll Everett, of the Cambridge Divinity School, reports him as saying of himself that it has been his good fortune to write at a time when the Church was passing from the letter to the spirit; we may add that it has been his wisdom neither to attack nor to defend the letter, but to re-interpret and re-emphasize the spirit. Dr. William Newton Clarke, of Colgate University, in his admirable lectures entitled, "What Shall We Think of Christianity?" puts this function of the spiritual leader, in this age of transition, very clearly:—

"The Christian people are called to-day to hold their faith, to open their minds, and to expand their hearts. First, to hold their faith. They are called to hold fast their sense of spiritual reality; not to be shaken from their confidence in the living God whom they and their fathers have known; to cling to the reality of religious life and the presence of divine help; to be religious in tenderness of spirit and heavenliness of mind, when the age is almost forgetting to be religious."—*The Outlook.*

Presbyterianism in New York.

The resignation of the pastor of Calvary Presbyterian Church, Harlem, and the decision of the trustees to sell the property and dissolve the organization, are commented on in Presbyterian circles in New York as events of no ordinary significance. They are regarded as practical indications of the decline of Presbyterianism in the great metropolis, and this decline is traced to the influx of Liberalism. Dr. Chambers says, that if ministers may no longer preach an inspired Bible, their authority is gone. There is no longer any need of ministers. They are lecturers and interesting speakers, nothing more. "Men," he says, "have come to think and speak disrespectfully of the Bible. They don't see the need of going to church as they used to." Dr. Atterbury, of the Park Avenue Church, who is set down as belonging to the radical wing, nevertheless bewails the present condition of things. "Presbyterianism in New York," he says, "is passing through sad experiences."

It is not to triumph over our fellow-Christians that we refer to these things, but for the warning that is in them. It is supposed that to give up "theology," and become liberal, that is, loose and indefinite in matters of belief, will fill churches and give the old denominations a new lease of life. The case of Presbyterianism in New York does not bear this out. It would be well for us to profit by the experiences of our neighbors.

The Living Church (Episcopalian).

A Literary Proletariat.

We have to-day a literary proletariat, a growing body of educated men who cannot find a field. In Germany,

Digitized by Google

a few years ago, there was a notable increase in the number of candidates for the ministry. The explanation suggested was the congestion in the other learned professions, as well as in the public service. University men turned towards the ministry in order to get a living and find a station. In churches whose canon law or whose common feeling make it improper for a man, once ordained, to go into business, the congestion will sometimes be peculiarly distressing. A certain number of men will find that they have entered a commercial blind alley. They cannot go back and there is no getting out.

The Church (Episcopalian).

Future of the Ministry.

The *Watchman* complains that "men of the first ability and promise are not drawn toward the ministry." Whatever truth there may be in this statement, and whatever may be the cause of this avoidance of the ministry by men of talent, it seems to us certain that in the twentieth century they who are real ministers of religion will find ample opportunity for the exercise of the finest gifts.

Christian Register (Unitarian).

The Lectures.

At Crawford, Neb.

Mr. Edward A. Kimball of Chicago, delivered a very interesting lecture to a large and remarkably attentive audience at the Congregational Church, Friday evening, July 7, on "Christian Science: its Promises and their Fulfilment." The speaker was introduced by Leroy Hall, who said,—

My Friends:—All mankind agree that there is a higher power, a primal cause or creator of all things, but as to what that power is, its nature, and man's relation to it, there are hundreds of thousands of different opinions. This establishes the fact that the vast majority of mankind have not the right conception of what God is and their true relation to Him.

When we are unable to solve a mathematical problem we know it is because of our ignorance of the principle and rules governing it.

If we fail to produce harmony in music it is because we do not understand the principle thereof.

When we seek the cause of all unhappiness, sorrow, misery, want, woe, pain, sin, sickness, and death, we find that "these evils have come upon us because our God is not among us; that is, we do not have the right conception of what God is."

To correct the error in mathematics we must learn the principle and rules governing it.

To correct discordant tones we must obtain an understanding of the principle of music, and demonstrate it.

To destroy the discord and produce harmony in our lives we must obey the command: "Acquaint now thyself with Him, and be at peace."

Nineteen hundred years ago Jesus Christ, the Son of God, our Saviour, came to show us the way of salvation, to acquaint us with God, the Principle of our being, to teach us how to solve life's problem aright, but not to do it for us. He proved the truth and potency of his teachings by feeding the multitude, stilling the tempest, casting out evils, healing the sick, and raising the dead, all in direct opposition to material laws, so-called, but in perfect harmony with the law of God. He knew that God and His laws are eternal and unchangeable, and that a right apprehension and application of them would heal the sick in any age.

After his ascension his disciples and followers continued the healing work for about three hundred years, when Constantine united Church and State; then Christianity lost its spirituality, and as a result thereof the healing power ceased.

In 1886 Mary Baker Glover,—now Mrs. Eddy,—a God-fearing and God-loving woman, who from early childhood had earnestly prayed, and constantly sought, for the higher import of the Master's words, while lying on a bed of pain, suffering from the effects of an accident pronounced fatal by her physician, being told that she could scarcely survive the day, called for her Bible, and there alone with God she read its familiar pages, when suddenly the true spiritual meaning of the words was discerned, and she was thereby instantaneously healed. For three long years in seclusion, with the Bible as her only guide, she sought for light, then she proved the truth of her conclusions by healing all manner of sickness, after which she gave them to the world in "Science and Health with Key to the Scriptures," the study of which has healed thousands after all other means had failed.

Every great truth when first presented is misunderstood. To correct these misconceptions and give the people a better opportunity to learn what Christian Science is, the Mother Church in Boston has created a Board of Lectureship composed of men and women eminently qualified to explain its principles. It is for this purpose that we have with us to-night Mr. Edward A. Kimball of Chicago, a member of said Board, who will now address you.—*Crawford Bulletin.*

At Grand Island, Neb.

Thursday evening, July 13, a lecture was delivered by Judge W. G. Ewing of Chicago, at the Bartenbach Opera House under the auspices of First Church of Christ, Scientist. The audience was a representative one, containing many of the wealthiest and best of our citizens, and the house was well filled. Judge W. H. Platt, mayor of our city, presided at the meeting and introduced the speaker by a few remarks as follows:—

Ladies and Gentlemen:—At the request of my esteemed friends in this city, I am here this evening to preside over this meeting and to introduce to you a distinguished gentleman of the Christian Science faith. Before proceeding further, I desire to say to those here who do not know me, that I am a member of no religious denomination whatever, but believe in giving to all the right to believe as they deem best, both in religion and politics. I know that there are many who do not only disbelieve in Christian Science but are its outspoken enemies, but in my judgment, no person should be condemned until he is heard, and the gentleman who is about to address you is one of note, not only as an attorney at the bar, but as a judge upon the bench, and bears a record for honesty, truth, and integrity. With these few remarks I have the honor to introduce to you, Judge Ewing, who will address you on the subject of Christian Science, and I know you will all give him careful, faithful, and close attention.

Wonderful Healing.

THE First Church of Christ, Scientist, in Topeka is at 210 West Sixth Street. Willis D. McKinstry is First Reader, and Mrs. C. S. Whittaker is Second Reader. The membership of the local church is one hundred. The average attendance is one hundred and fifty. Services are held at 11 A.M. Sunday, and 8 P.M. Wednesday.

The meeting last night was one of unusual interest. A reporter for the *Capital* was present, and gives the following account of the services.

The strong harmony of a hundred voices singing the tune of Arlington and the words of John Greenleaf Whittier opened the evening meeting.

> The healing of the seamless dress
> Is by our beds of pain:
> We touch him in life's throng and press,
> And we are whole again.

The singing was from the "Christian Science Hymnal," a book compiled from old standard hymns and recent compositions, especially for the use of the Christian Science societies.

Almost every seat in the pretty little hall was occupied when the meeting was commenced. Every one present appeared to be happy and contented. There was not much "long-faced business" about the meeting; yet a spirit of sincerity and reverence was at all times manifest.

On the low platform, behind a plain reading desk, stood Willis D. McKinstry, the First Reader of the society. His office corresponds to that of a minister of the orthodox church, in that he leads the exercises. His style on the platform is quiet and informal.

After the singing of the hymn, Mr. McKinstry read a selection from the Bible, and followed it with a brief extract from "Science and Health with Key to the Scriptures," by Rev. Mary Baker G. Eddy.

After the singing of another hymn, Mr. McKinstry addressed a few words to the audience, explaining to them the duty incumbent upon them in giving to the world the truths of Christian Science. He told of his own experience with the disease of nasal catarrh which he vainly tried to cure by medical skill, and which yielded to the treatment of the Science.

"The meeting is now in your hands," said Mr. McKinstry. "Let any one who desires speak to us as he or she feels inclined."

A young woman on the back row of seats arose and said, "I was troubled greatly with my eyes, and doctored them faithfully according to the direction of my physician. I was kept in a dark room. My eyes were covered with bandages. They grew worse instead of better. After my first treatment with Christian Science I took off the bandages and saw the glorious light again. But I lacked faith and feared to go without bandages. I was assured that by putting my trust in God all would be well. My sister burned up the bandages, and then I went without. In a few days I was well, and could see as well as ever. I have been learning to trust in God ever since."

Another lady told of her own experience with the cure of Christian Science. She was changed from chronic invalidism, resulting from an injury in early life, to a condition of perfect health. She also told of her child, who was cured instantly of scarlet fever; of her father, who was cured of a severe case of somnambulism; of her sister, who was healed by Christian Science of erysipelas. "But what I am most thankful for," she concluded, "is the love for God which Christian Science has taught me."

Then a lady arose and explained how she vainly sought relief from a hereditary case of sick headache, until she was persuaded to give Christian Science a trial. She said, "I now am perfectly well. I have no troubles on account of health." A well-preserved, healthful face was a "document in evidence" of the truth of her statements.

Perhaps the most wonderful story of complete cure was told by a young lady who was a student at Washburn College several years ago, and was a leader in her classes and in college society circles. Her health utterly failed, and the story of her suffering was told as follows:—

"I suffered an injury which resulted in concussion of the spine. I had the best medical services in the city, but the disease grew worse, and became complicated with other afflictions. My eyes failed. I was obliged to wear dark glasses. I went to New York, Buffalo, and Chicago to consult specialists. In Chicago, my eyes were operated on three times by the most noted surgeons in the country. A spinal specialist treated me at the same time, and finally told me that he could do nothing more. I was a hopeless, helpless invalid, and came back to Topeka despairing of everything. Paralysis of the left side set in. Four physicians said that death or insanity was inevitable. I was subject to melancholy, and my mind was constantly reverting to the awful questions touching the reality of life itself. I could not accept the orthodox religions. They seemed to be unsatisfying and impractical. I felt that I would give anything to know the Truth. A Christian Science healer called and talked to me of the healing power of Christ. I thought at first that it was the same old thing I had heard in the churches. But the healer called again, and I finally became deeply impressed with the views expressed. In a few weeks' treatment I was healed. I have devoted my life to Christian Science. I feel that I owe everything to it."

Following was the testimony of a lady who told how she sustained a terrible injury in a runaway accident, and was literally carried home to die. The doctors of the medical schools could give her no relief except by the temporary effect of opiates. Finally, after she had given up hope, she called in a Christian Science healer. The healer came at two o'clock in the afternoon.

"She sat down by my bed and talked to me," said the lady, "and then she read from Science and Health. I don't know as I realized what was passing over me, but I do know that at four o'clock I was able to sit up in bed. Then the healer left. Fifteen minutes later I got out of bed and walked across the room and sat down in a chair. I was hungry, and was told that I could have anything to eat that I wanted. I had not eaten anything except milk and a little bread for seven weeks. I called for beef steak, vegetables, and fruit, and made a hearty meal of them. Four days later I was out and was able to walk thirteen blocks. I have never been sick since."

Next a gentleman, one of the leading Christian Science healers of the city, gave his testimony. He had not believed in God or in religion. For three years before his conversion to the doctrines of Christian Science he had no faith in any form of Christianity. Then he happened to have personal knowledge of the cure of a woman dying of consumption. The cure was effected by means of Christian Science.

"They said that it was God who wrought the cure," said he, "and I believed it was, because I did not believe that any one else could have done it."

He then spoke of the happiness of the Christian Scientist's life, and of the contentment inspired by the belief. In conclusion he said,—

Digitized by Google

"I believe that ninety per cent of the people who have tried Christian Science honestly have either been cured or greatly benefited."

The next speaker, Mr. F., freight agent of the Santa Fe railway, told of his first acquaintance with the Christian Science belief. He came into possession of the book, Science and Health, and read it through in one day. He persuaded his wife to try the treatment, and although she had been an invalid for some years, she was cured.

"I used to wear glasses when I was younger," he continued, "but you can see that I don't now. I don't need them, and besides, it is a great deal more convenient to do without."

A lady then related an experience that differed from many of those spoken of in that it was not a rapid cure, but required many months for its completion. She attributed this to the fact that she had long been a student of the Bible, and that when she tried to reconcile her established interpretations of the Word with the interpretations given by Science and Health, her mind revolted, and she came to believe in the teachings of Science and Health only by degrees.

"I started by calling in the minister of my church, a good Methodist," she said.. "I had given up hope of relief from medicines. I said to the clergyman: 'I want you to pray with me for health.' He replied, 'It will do no good. You should pray that God bless the medicines and guide the doctors. The day of miracles is past.' But finally I threw away my medicines, and took up the study of Christian Science. At the end of eight months I was able to sit up in bed, and from that time on, my recovery was rapid."

After several others had given testimony, the meeting was brought to a close.

Topeka (Kan.) Daily Capital.

Suggestions to a Beginner.

My Dear Friend:—In reply to your good letter I will try to tell you something of my impressions of Christian Science. I wish I might do justice to the beautiful truths that have come into my life.

Because of a mistake of my own I will say, first, do not accept anything you cannot understand, remembering, of course, that one cannot expect to fully comprehend some of the deeper truths until he has demonstrated some of the lesser or introductory ones.

In my own case, I soon found from the personnel that this people were one in whom I could place confidence, for they seemed to be those referred to in the following line: "Through whom the current of everlasting life flows still and deep and strong." I felt that no harm could come to me among those who professed to be controlled by Love alone and, indeed, whose lives indicated it. So I have been content to drift, to go slowly, and quietly and surely develop, for "Heaven is not reached at a single bound." What I mean is this: Refuse to coerce your reason or think you must indulge in any mental aberrations, as I thought, for remember that spirituality, which is merely the capacity for understanding Truth, is the very perfection of reason.

I like to believe that "truth should be self-evident," that which, in the very nature of things, is the most natural, and I have come to doubt that profession of Christianity which requires a certain forced and emotional enthusiasm to keep worked up to the proper religious ecstasy and sanctity. But it seems to me that the true religion should be so attuned to the "eternal fitness of things" that it is the most natural way to live to one who has really the simple wish to live aright. Nor can I see the wisdom of scaring people into "Heaven, a place of love," by fear of a place called hell, and giving them only the somewhat indefinite instruction to believe in Christ and fear God. Is it not better to be won into heaven by Love, to know that sins are not forgiven until they are destroyed, and to so understand what Heaven and Love and God are, that it appeals to and controls your thought, so that your acts are good because your thoughts are good? Heretofore my religion has been something that while I feared to deny it I did not understand it.

I no longer look upon heaven as a place somewhere of gates and gold and luxurious repose, nor upon God as an impossible being, like Santa Claus; for did not Jesus say, "The kingdom of God cometh not with observation: neither shall they say, Lo here! or, lo there! for behold, the kingdom of God is within you." Heaven is not a place, it is a condition, and, best of all, it is right here! God is the Life, Intelligence, and Power of the universe. Life is eternal and the true man is immortal. Was not Christ always trying to turn men from the material to the spiritual? But see how the Bible is materialized to-day. I have gotten much more out of my Bible since trying to read it spiritually and understanding the allegorical illustrations.

Science and Health says that God is all. I had no difficulty in believing that there is no life in matter. Matter of itself is dead, and it seems to have life only as it is possessed of some property, which, however, is not intrinsic.

Is sin real? As we commonly use the word it most certainly is. It would seem to be an abuse of reason to say darkness is anything. Darkness is nothing—it is the absence of something. We popularly speak of negations such as this as though they were something in themselves. Sin is the absence of God or Good. As I understand it, the reason Christian Scientists speak of sin as unreal is this. The Bible says that God made everything that was made, and it was good; so, according to the Scriptures, God did not make evil and God made all that was made.

You understand that it is useless to argue terms; to get the meaning of the statement you must attribute to each word of the statement the intended meaning of the author. So let us see what Mrs. Eddy means by saying sin is unreal. Is a lie real? The question is not, Was a lie really told? but, Was what was told really so? The word real is a synonym of the word truth. Now, a lie is never truthful—its acceptance as the truth depends entirely upon the credulity of the hearer, but this does not make it a truth. I might believe you were president, and to the extent that I recognized your orders and supposed status, your presidency would be real to me. You will see from this that only that is real which is real in the realm of abstract truth, irrespective of any perverted and individual application.

Is matter real? To our present sense it is real, but we may spiritually discern its true status. Having in time, indeed, reached the absolute understanding of Mind we shall see that even matter and our bodies, also are themselves only mortal beliefs, and that Mind alone is real or truthful. However, this is post-graduate understanding and it need not trouble us now. What our office is, is to see that matter, or our bodies, do not dominate us, but that they are our humble and obedient servants as we rise to the true power and dignity of man's estate.

As to the sect of Christian Scientists, I will say simply this—that there is nothing in a name. Put away your literature, do what you will, go where you can, and find the truth. Search for it in the Bible, in nature, among the stars, anywhere—there can be only one interpretation of existence which is true, and having found the truth call it what you will—X, Y, or Z—but if it is the truth, Christian Scientists believe it will coincide with what Mrs. Eddy has found and which she has for designatory and convenient

Digitized by Google

reasons named Christian Science, and the name seems peculiarly appropriate.

You asked me if it was another kind of philosophy. If by "philosophy" you mean truth, I will say there can be but one kind of truth, and I believe Christian Science to be truthful. If, however, you refer to the common meaning of philosophy, as indicating a system of man-made wisdom or man-evolved judgment, I will say Christian Science is not that. In the ordinary sense of the term, any doctrine founded absolutely upon the Scriptures and attributed to a divine source, is not philosophy according to the latter meaning.

All truth, however, is divine, but I believe the philosopher considers his wisdom as self-evolved.

How sweet life is when lived aright, and let us wake up and live.

Sincerely yours,

ARTHUR T. MOREY.

Renounces Spiritualism.

LONDON, June 20.—Spiritualism, in the ordinary acceptance of the term, has received a heavy blow in France. M. Camille Flammarion, its most prominent leader and best-known medium, has renounced it. He affirms his belief that the phenomena of spiritualism are due to auto-suggestion and not to the influence of the spirits of the dead. Strangely enough his conversion is due to Allan Kardec's book "Genese," which was supposed to be written at the dictation of the late M. Galle, the discoverer of Neptune, through Flammarion himself as medium. Flammarion now declares that, although the book was produced in a series of trances in which he was the innocent and honest instrument, it is impossible that the illustrious astronomer could have dictated the blunders contained in "Genese."

That work states, for instance, that Jupiter has four satellites and Saturn eight, whereas it is now known that Jupiter has five and Saturn nine. When "Genese" was written, however, these discoveries had not yet been made, and M. Flammarion concludes that the information transcribed by Allan Kardec was merely the reflection of his own (M. Flammarion's) knowledge, and of what was said around him concerning the stars and planets.

After fifty years' association with the most celebrated spiritualists, M. Flammarion has come to the conclusion that these phenomena are in close concord with the ideas, convictions, and impressions of the assembly amid which they take place. Thus the organ melodies written in the group directed by Eugene Nus were really due to the unconsciously "exteriorized" spirit of Bureau, the musician. Auto-suggestion is extremely common in these experiments, says M. Flammarion, and the charming fable by M. Joubert, president of the Carcassonne court, the delicate poems obtained with the planchette by M. Mathieu, and many other works, all tend to show that the mediums wrote under their own influences. The human mind is probably a spiritual substance endowed with psychical power able to act outside the limits of the body.

This force can be transformed into electricity, heat, or movement, or can bring latent energies into operation, but it remains closely in touch with the mental condition. We put to a table affected by our nervous movements questions on subjects which interest us, and unconsciously we ourselves direct the replies. The table speaks to us in our own language, with our own ideas, within the limits of our own knowledge, and according to our opinions and beliefs. M. Flammarion adds: "We are given the absolute reflection, far or near, precise or vague, of our own feelings and thoughts. All my endeavors to verify the identity of a spirit have failed."

M. Flammarion's defection, especially announced in so crushing a way as the demolition of one of the most serious works of the doctrine, has created an immense sensation among the disciples of Allan Kardec. They say that unless energy is shown the year 1900 will see the end of Spiritualism. To prevent this catastrophe they speak of revising "Genese."—*The Inter Ocean.*

The Queen and the Suffragists.

BY simply greeting the advocates of a wider influence of woman in politics, this Queen, who has ruled successfully for sixty-three years over hundreds of millions of subjects, and during those years has been a loving wife and the mother of a large family, answers the stock arguments about the incompatibility of public life and politics with what is called "woman's sphere." Who shall dare decide what any person's sphere is? Such attempt is an interference with the individualism which is the basis of all personal rights. If men and women are to be born into castes from which they can never escape, we might all just as well have been born in India. It is this personal independence which is most peculiarly an American characteristic. It lies at the base of forceful life and character. Most of the old-fashioned arguments against woman suffrage assume that those who were born women must be automatons, the sport of man's caprice so long as they live. The new argument that woman should be too womanly to engage in politics is somewhat better. Queen Victoria answers it by her presence and approval at a woman's suffrage tea-table, which she had arranged to do its advocates honor.

Here again is a lesson for American women, who will be more sovereign than the men are so soon as they have the right to vote. It is often objected that if women had the ballot they would be too fanatical and radical to make wise use of it, but the example of Queen Victoria is refutation of this. No male monarch ever ruled with such justice and impartiality as she. The great influence she has had has sobered rather than elated her. It has made her feel that deep responsibility to God which makes men and women thoughtful and conservative of the good, and more tolerant even of the evil, lest in destroying it the good should also perish.

It is just this kind of education that women of the present day need. Because they are refused the ballot, their lives are often given over to frivolity and fashionable follies. Better let them take part in politics, purifying the political atmosphere, and at the same time making their own characters more noble and also more truly womanly. Woman has a higher function than politics. This is true. It is in bearing the men and women of the future. All the more necessary, then, that the women who are to be the mothers of the next generation should throw aside wealth and selfish pleasure as the objects of their lives, and devote these lives to bettering the laws, and in every other way possible making this world a better place for the men and women of the future to live in.—*American Cultivator.*

Decision Against Materialization.

LINCOLN, Neb., July 20.—The first known judicial determination that disembodied spirits cannot be materialized by human means was made by United States Commissioner Billingsly yesterday, who decided that it was impossible. The State Spiritualists' Association is holding a camp meeting here. It contracted to pay D. J. Moran of San Francisco $180 for the appearance here of his two sons as mediums. When Moran reached here he insisted upon a published statement that the children were not fakes. This was declined and he refused to allow the children to give

Digitized by Google

seances. He was then arrested for using the mails to defraud. President Madding of the society positively swore that disembodied spirits could be materialized, but the other officers were not so sure. The defendant's attorney moved to dismiss the case on the grounds that as a legal proposition a man cannot be held for refusing to do that which cannot be done, and the court sustained the motion and discharged Moran.

Boston Evening Transcript.

Miscellany.

Victim of Imagination.

THE papers of Cincinnati, O., give the following account of an experiment recently performed on a patient at the Cincinnati Hospital.

The doctors at the Cincinnati Hospital to a man are disbelievers in faith cures or the doctrine of the Christian Scientists, yet several of the internes have recently been forced to admit that the mind really exerts an influence over matter, and sickness is occasionally due to imagination. An experiment of a convincing character was recently made at the hospital upon Abraham Pullum, one of the colored patients.

Pullum, who is thirty-five years old, is more superstitious than the average Ethiopian. He came to the hospital a year ago suffering from fits, which he believed were superinduced by a tumor in his right side. When his spells would come upon him his respiration and pulsation were greatly increased, and not unfrequently his temperature would rise several degrees above normal. Medicines given for his relief exerted but little influence, and Pullum was beginning to be looked upon as incurable. He told the doctors that if the tumor in his side was only removed he would get well. Several examinations were made and the doctors became convinced that the patient had no tumor and Pullum's sickness was largely due to imagination. They, however, agreed upon an experiment. One bright morning Pullum was placed under an anæsthetic and a neat incision was made in the scarf skin in the region of the supposed tumor and the wound dressed before the patient returned to consciousness. When he awakened he was told that the tumor had been removed. Each morning a doctor came and redressed the wound, always taking care that a towel covered Pullum's face before the bandages were removed. In time the wound healed and since then Pullum has never had a fit, and to-day he is a well man. He is now being retained as an orderly in one of the hospital wards.

Rattlesnakes as Missionaries.

Some years ago, when the state of Ohio was "out West," there resided a family on the Sandusky River, consisting of an old man of the name of Beaver, and his four sons, all of whom were hard "pets," who had often laughed to scorn the advice and entreaties of a pious, though very eccentric minister, who resided in the same town.

It happened one of the boys was bitten by a rattlesnake, and was expected to die, when the minister was sent for in great haste.

On his arrival he found the young man very penitent and anxious to be prayed with. The minister, calling on the family, knelt down and prayed this wise:—

"Oh Lord! We thank thee for rattlesnakes. We thank thee because a rattlesnake has bitten Jim. We pray thee send a rattlesnake to bite John; send one to bite Bill; send one to bite Sam; and, O Lord, send the biggest kind of a rattlesnake to bite the old man, for nothing but rattlesnakes will ever bring the Beaver family to repentance."

Union Gospel News.

Too Many 'Cieties.

An old colored preacher was asked how his church was getting on, and his answer was: "Mighty poor, mighty poor, brudder." "What is the trouble?" and he replied: "Dem 'cieties, 'cieties. Dey is jist drawin' all de fatness and marrow outen de body and bones ob de Blessed Lord's body. We can't do nuffin without de 'ciety. Dar is de Lincum 'Ciety, wid Sister Jones and Brudder Brown to run it; Sister Williams mus' march in front ob de Daughters of Rebecca. Den dare is de Dorcases, de Marthas, de Daughters ob Ham, and Liberian Ladies." "Well, you have the brethren to help in the church," we suggested. "No, sah, dar am de Masons, de Odd Fellers, de sons of Ham, and de Oklahoma Promised Land Pilgrims. Why, brudder, by de time de brudders an' sisters pays all de dues an' tends all de meetins, dere is nuffin left for Mount Pisgah Church but jist de cob; de corn has been shelled off an' frowed to dese speckled chickens."

The Living Church.

Strange Case of Paralysis.

A St. Louis physician relates the following in *The Republic:*—

There is in one of the hospitals in St. Louis a doctor who is suffering with a case of progressive paralysis. He is practically helpless and lately even his tongue is becoming paralyzed so that in a short time he will not even be able to speak. When that man falls asleep he has perfect control of his muscles.

He will move around in bed, turn over, scratch himself, and make motions which he will find to be absolutely impossible in a waking state. He told me one day that he had awakened while he was scratching himself. He was utterly astonished to find himself moving his hand, and as he felt the surprise his power of motion passed away from him.

Worried into Lockjaw.

William Reed, a driver, of 51 Market Street, was thrown from a carriage on Memorial Day, and his right thumb was broken, a piece of the bone penetrating the flesh. He did not want to remain at Bellevue Hospital, where he was taken, until told that there was danger of lockjaw. He was discharged from the hospital after two days.

A week later he returned to the hospital and said that he had lockjaw. He soon died of that disease. The surgeons at the hospital are confident that the disease set in merely from Reed's constant worrying about it.

New York Sun.

Speaks after Fifteen Years.

For the first time in fifteen years, R. W. Wagner, a prominent citizen of Bucyrus, is able to speak.

In 1885 he was afflicted with illness which left him mute. Long treatment by skilled physicians failed to restore the power of speech, and he had despaired of ever recovering, but yesterday, while holding a little child on his lap, he was seized with a sudden desire to speak to her, and to his surprise was able to do so.

His voice has an unnatural sound, but aside from this he speaks as well as ever.—*Chicago Times Herald.*

Truth Must Prevail.

A Yankee in Santiago advertised "toothache drops, warranted to cure the pain in ten minutes." A native bought a bottle, applied the drops to his aching tooth, timed the Yankee by his watch, and as the pain did not abate in ten minutes he sued the Yankee in court, where the Yankee was fined $1,000. Truth is mighty and will prevail.

Question and Answer.

About twelve years ago I was informed there was one Mrs. Eddy, a spiritualist, living at one time in Boston and afterwards in Chicago, and also another Mrs. Eddy, a Christian Scientist, in Boston, and that these two persons were often confused in the minds of non-Scientists. Is this correct, and did the former Mrs. Eddy die about two years ago?—M. E. C.

We have heard of a Mrs. Eddy, a spiritualist, who was at one time located in St. Louis. Some years ago she may have been located in Boston, but we do not know that she was. Having heard of a Mrs. Eddy who was a spiritualist, some may have concluded that this person and the Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, were one and the same. But any one who has read the Christian Science text-book, "Science and Health with Key to the Scriptures," honestly desiring to understand it, has readily seen that the author could not have been a spiritualist, for the teaching is just the opposite of Spiritualism. The reading of Science and Health has caused spiritualists to give up their belief in Spiritualism, thus proving that the teachings of Christian Science and Spiritualism are opposites.

As to the report that Mrs. Eddy, the spiritualist, died about two years ago, we are not informed.

Gardening.

BY ETHEL WHITCOMB.

I went by the field of the slothful, and by the vineyard of the man void of understanding; and, lo, it was all grown over with thorns, and nettles had covered the face thereof, and the stone wall thereof was broken down. Then I saw, and considered it well: I looked upon it, and received instruction. Yet a little sleep, a little slumber, a little folding of the hands to sleep: so shall thy poverty come.—PROVERBS, 24: 30-34.

I ALWAYS receive fresh help from thinking that we are all gardeners having our various patches of ground to till. The first demand of Christian Science is Scriptural, "Break up your fallow ground: for it is time to seek the Lord" (Hosea, 10: 12). Hardened by creeds and dogmas, chilled by selfishness and sin, all must hear the voice of one crying in the wilderness "Repent." Weary of all that is fleeting and false, with hearts hungering and thirsting for righteousness, the "fallow ground" is broken up and prepared for planting.

"Whatsoever a man soweth, that shall he also reap." No words could be truer! Each thought seed springs up and blossoms in our gardens. If we would have lilies we must plant lilies. "Do men gather grapes of thorns, or figs of thistles?" If we would know joy we must sow freely seeds of humility, love, mercy, and justice, never admitting a discordant thought. Not only must we plow and plant, but also weed our gardens—erase every mortal thought, every belief in a power apart from God—Good. We have no time to peer over our fences to watch and criticise another's weeds, for we all have enough to do in our own gardens. Our Master said "He that is without sin among you, let him first cast a stone." To weed our gardens once a summer is not sufficient, daily must we go through this process, for it is easier to uproot a weed that has grown but a day than one a week old. There are many reasons why we should keep our gardens weeded, and the flowers of heaven blooming. One is the example it sets for others. Our Leader says "No reproof is so potent as the silent lesson of a good example" (Miscellaneous Writings, p. 127).

Our first and great duty to the world is to get ourselves right, to make our own gardens beautiful. Others beholding the sweet blossoms and inhaling the pure odors will be inspired to make theirs more perfect. I have sometimes noticed in my material garden flowers growing which I did not plant. These seeds were blown over from a neighbor's yard and took root in mine. There is a deep lesson to be learned from this illustration. Thoughts are contagious to the mind unprotected by Christian Science, hence we are constantly sowing in others' gardens seeds which will bless or curse them. Are we awake to this sacred responsibility?

At this time many are preparing for vacations. We do not need to go away, but we all need to go up. Let us take with us this summer the thought of the garden, and in prayer and humility spend our hours in plowing, planting, and weeding. We owe it to ourselves and we owe it to humanity. Let us rouse ourselves, and be active, joyous gardeners, working on without a sigh until each weed is uprooted, and Love reigns in every heart. "He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him" (Psalm 126: 6).

A Convincing Experience.

To the Editor of the Globe:—At different times of late I have seen little paragraphs in reference to Christian Science, which the writers have undertaken publicly to denounce. Allow me to relate my experience. Christian Science was introduced to me three years ago last February by a man from your city, a great friend of mine, who had been healed by its power. His remarks were sweet and full of love, though strange and new to me. They were seed sown in good soil, for as I listened with an earnest heart, longing to know what this message was, the desire was planted deep down in my consciousness, and the seed began to grow.

"Science and Health with Key to the Scriptures," written by Rev. Mary Baker G. Eddy, was sent for, as something new was needed, for I myself, as well as my household, had taken medicine enough. We were all interested, but could not understand the book. One night three weeks later I was feeling as though I had the grip. Every bone in my body seemed as though it would break. I had also been troubled with liver complaint, biliousness, and catarrh of the head for years. On opening the door I said to my wife, "I will prove Christian Science to-night to be a lie or the truth." When the rest of the family had retired I took Science and Health, and started to read, with the object of proving the end to which I had made my vow. In four hours I was healed of all these complaints. I have never suffered from any of them since. I have never since used any medicine in my home. Christian Science has been our guide.

Before gaining the understanding of Christian Science there was a struggle, and, like wrestling Jacob, I struggled with all diligence until I reached this conclusion: that it was the divine Principle our Saviour had taught, that it had been brought to light by the one whom God ordained to do this work, Rev. Mary Baker G. Eddy, and that Christian healing is not a new thing. It has only been hidden for hundreds of years by those who talk about God and Jesus Christ and the Holy Ghost until they forget how to do His will, and keep His commandments; just as a person might tell some one how to plow in the middle of winter, but when plow time comes he has forgotten how himself, or in fact never knew. Still he talked. This is something like those who condemn Mrs. Eddy's work because they do not understand it. Christian Science led me out of misery into peace and health and happiness. It has enabled me to help others, and it will do the same for you. Then you will learn that Scientists are condemned, but they never condemn in return, for it teaches us that God is Love, and how to love our neighbor as ourselves. Christian Science teaches how to resist evil in every way it may appear.

be it thought, word, or deed; how to live happy, healthy lives and to love one another. HENRY COMPTON.

Galt, June 27. *Globe*, Toronto, Ont.

The Larger Life.

BY WALDO PONDRAY WARREN.

THAT Christian Science can and does heal the sick, has been told in song and story, in spoken and written testimony, by countless grateful hearts—hearts from which the Christ-Truth has rolled away a stone. But the songs of gratitude for physical deliverance which are ascending up forever and ever, are as but the first feeble efforts of childhood's music-making to the rapturous symphonies of the masters of music, compared with the untold joys of a liberated and purified consciousness, as it learns to lay hold on the infinite, repeat the harmony of heaven, and awake in the likeness of Love.

Passing pain and its soon told tale, we press on to life's larger lessons, and begin to learn the vastness of the new universe into which we have been born by the priceless understanding of Christian Science.

The Christ Truth dawns as a bright star above the chaos of the past, and says within the heart, "Let there be Light!" It rends the rocks and barriers, and reveals the way toward the realization of the highest ideals. It awakens us to realize that life is really worth living, that not for nothing are our patient footsteps onward taken. It gives a purpose to live for, a reason for existing, and a higher hope, a fuller breath, a grander view. It reveals cause and effect, and makes plain things which have been secret from the foundation of the world. It answers the queries of the ages, "Who am I? What am I? Where am I?" It quenches the fires of passion latent in the recesses of thought, and lights the flames on the Mount of Revelation. It surrounds us with those we love, by teaching us how to love those around us. It is the Way, the Truth, and the Life,—the Way of progress toward the perception and appreciation of the infinite; the Truth for which the ages have yearned; the Life, hid with Christ in God—the mansions in our Father's house, even our dwelling-place in all generations.

Not merely to heal the sick ones of earth is Christian Science come, but to replace discord with harmony, darkness with Light, and sadness with joy. To regenerate humanity; to unfold infinite progress; to reveal the ever-present Universe of Mind above the mists of matter; to destroy all that came not forth from God in the beginning; to liberate that which should be free; to bind that which should be bound; to do the work and will of God till all discord, sin, disease, and death are swallowed up in the infinite harmony of Life, Truth, and Love,—this is the sublime mission of Christian Science.

A Suggestion.

ONE of the best proofs that Christian Science is the Truth is the opposition it meets with in certain seemingly influential and powerful quarters. The secular press is, as a body, disposed to be fair and impartial to our Cause, as well as all questions of import to the people. The editors of these papers doubtless read far more literature prejudicial to Christian Science than favorable to it. Thus to some extent they may become biased in their views by unreasonable and unjust criticism if not balanced by a great degree of equity and opposing evidence constituting facts and results.

The Christian Science *Journal* and *Sentinel*, as the official organs of our cause, contain a great amount of reading matter which exactly fills this need. Then it would seem a duty as well as a privilege for every Church and Society in the Field to see that each paper in their town (at least those of pronounced influence) is supplied regularly, by subscription, with these two important journals. The cost to each church would be small, and the results would naturally be of nearly incalcuable value to our Cause. Let all consider this question, and act as Truth leads them.

EDWARD E. NORWOOD, Memphis, Tenn.

Letters.

Dear Editor:—We have been enjoying with the loved ones in Boston the Communion time, and all its wondrous blessings. We have realized that there is no limitation in Spirit, for though the ocean rolls between us, the uplifting has come to us in great measure, and our meetings have shown the effect of it. Even though we did not see our beloved Mother face to face, her loving thought and message came to us, for our strengthening. She has told us in "Retrospection," that nothing but the student's own sin can separate one from her; and we are striving each day to make the veil thinner that seems to dim our vision.

You will be glad to know that the work goes on steadily. Almost every day brings new patients. I think nearly all the students have two or three patients, and some more than that. Each week brings new inquirers; and we have abundant evidence that the seed is taking root. We have just had a visit from a Methodist minister, who came to learn of Christian Science. He will spend the summer studying Science and Health, then will take the class lessons, and, I think, will join me in the work in Berlin this winter, reading with me, and also giving his time up entirely to the work. He is a good man, and I am grateful to God for raising up such a worker. He is German. Words cannot express my gratitude for the *Journal* and *Sentinel*. They are indeed heavenly messengers. God bless you. FRANCES THURBER SEAL.

Luttichau Strasse 26, Dresden, Germany, June 29, 1899.

Beloved Mother:—In Saturday's mail came the July *Journal*. As I took it I thought, I wonder what the dear Leader has in this book for me. This was the first time I had ever thought in just that way.

As soon as I reached my room I looked to see, and found the poem, "Signs of the Heart." As I read, words are inadequate to express the love that went out to you, dear Leader of Christian Science.

When I have been out in the fields with a class of little ones for the purpose of "Bird Study," that for which we listened the most intently was the song, especially that song so full of love (we used to think) that somewhere a little songster hearing and understanding, somewhat, would answer back.

So this poem, so full of love, is like the song and my heart answers back.

Lovingly yours,

MARY ELEANOR RAYMOND, Essex, Mass.

Notices.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this list is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen: $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2 50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., AUGUST 10, 1899. Vol. 1 No. 50

The American Indian.

Have We Failed in Our Treatment of Him?

"I WOULD rather be a Malay subject to Spain than an American Indian subject to the Indian Bureau," exclaimed a distinguished clergyman the other day. "Our treatment of the Indians," declares a great religious journal, "has been a miserable failure."

Easy, very easy, is such extravagance as this. The United States government does not "talk back." So it is safe for every orator of limber tongue and editor of vagrant wit to pitch into it, sure of applause from that section of the people, smaller than it once was but yet not insignificant, which delights to see its country blackguarded and its public men condemned as hopelessly inferior to those of Europe, don't you know. The Philippine situation has given a tremendous stimulus to this kind of chatter, half malicious and half ignorant. It is well, in the interests of the exact truth, therefore, to have such a powerful reply as that of ex-Senator Henry L. Dawes in his paper in the August *Atlantic Monthly*, "Have We Failed With the Indian?"

Out of his great fund of knowledge and experience Mr. Dawes answers this question with an emphatic negative. The Indian policy of the United States as we now know it is not an old policy. It was initiated only about twenty-five years ago. It is, as the ex-Senator graphically says, still in the "green wood" of its existence. That policy was forced upon us by the fact—flatly contrary to a popular superstition but a fact hard and undeniable—that the American Indians are not being "exterminated," but are steadily increasing in numbers—and they are, perhaps, the only important race of aborigines in close contact with the white race of which this can be said. This is our present Indian policy as Mr. Dawes defines it:—

"Inasmuch as the Indian refused to fade out, but multiplied under the sheltering care of reservation life, and the reservation itself was slipping away from him, there was but one alternative—either he must be endured as a lawless savage, a constant menace to civilized life, or he must be fitted to become a part of that life and to be absorbed in it. To permit him to be a roving savage was unendurable, and therefore the task of fitting him for a civilized life was undertaken."

It was only in 1877 that the first formal step was taken in this new departure by the appropriation of $20,000. The next year this grant to the nation's wards was increased to $30,000, the next to $60,000, as the work grew and prospered, then to $125,000, and finally to the very much more adequate sum of $2,638,390, the appropriation for 1899. Since 1877 the national disbursements for the benefit of the Indians have aggregated almost thirty millions. There are now about two hundred and fifty thousand Indians in the United States, nearly as many, probably, as when the white men first landed on the continent, and many more than there were within our borders fifty, or forty, or twenty years ago.

This government of ours, which is so often and so vociferously accused of having "failed" with the Indian, now has twenty-four thousand Indian children at school. Seventy-six per cent of the graduates of these schools are vouched for by the officials who have educated them and watched their subsequent conduct, as "good, average men and women, capable of dealing with the ordinary problems of life and of taking their place in the great body politic of our country." By the terms of the Indian Severalty Act every Indian head of a family is given a homestead of one hundred and sixty acres of land, if he chooses to take it, either on the reservation of his tribe or on the public domain elsewhere—this homestead to be inalienable and untaxable for twenty-five years. Under this generous and enlightened statute, 55,467 individual Indians have secured in all 6,708,628 acres. Of this great area, 1,066,368 acres have already been fenced in, and these Indian farms have produced in hay, vegetables, stock, grain, etc., not only what their owners have consumed, but a surplus valued at $1,220,517. Hand in hand with the civilizing has proceeded the Christianizing of these once intractable people. Eight thousand of the thirteen thousand Sioux are church members. The Presbyterians alone in various parts of the country have five thousand Indians in their churches and four thousand in their Sunday Schools. The total number of regular church communicants among the Indians is 28,351.

Of course there have been mistakes; there are shortcomings; the results are still far from complete, the methods far from perfect. From time to time there are instances of wrong-dealing, like that which provoked the Chippewa outbreak of a few months ago. The wildest and most primitive tribes are not yet wholly pacified—as witness an occasional outbreak like that of the Yaquis on the Mexican border. But ex-Senator Dawes's impressive summary of what has already been accomplished is convincing proof that the Indian policy of the United States "now stands justified." And it must be remembered that the American Indians are the most difficult of all aborigines—the fiercest, most formidable savage warriors who ever blocked the path of the Caucasian pioneer.—*Boston Journal.*

Items of Interest.

July 31, Secretary Alger gave out for publication that part of his statement which relates to his administration of the war department. He calls attention to the magnitude of the work to be accomplished when within sixty days from the declaration of war the strength of the army was increased from twenty-five thousand to two hundred and seventy-five thousand, and everything for the equipment of this great force had to be manufactured and distributed. He places the responsibility for the appointment of the officers of the volunteer army upon President McKinley; the appointments are defended, however. The retiring secretary denied that there was any improper use of funds. This defence of his administration and incidentally of President McKinley was his last important act in the office of Secretary of War, and his official title was appended to it.

Mr. Holls, secretary of the American delegation to the Peace Conference, in the course of an interview, said, "There are a few facts which are better than any argument. It is a fact that nearly all of the eminent diplomats who were delegates to the Conference, came here two months ago sceptical, if not cynically pessimistic, and it was freely rumored that they would soon leave the work to their underlings. Yet hardly one has even been absent from a single sitting; and those who were most ready to stop at the beginning are now most deeply impressed with the value of the work."

Mr. Holls also said he felt proud of the cordial respect and friendship accorded the American delegation throughout.

The Peace Conference at The Hague ended Saturday afternoon July 31. Sixteen governments, through their representatives, signed the arbitration convention, fifteen signed the convention on rules of war, fifteen the adaptation of the Geneva convention to naval warfare, seventeen the declaration prohibiting the use of explosives from balloons, sixteen the declaration prohibiting the use of projectiles containing asphyxiating gases, and fifteen the prohibition of the use of dum-dum bullets.

The government of Italy is fearful that under the provisions of the arbitration convention of the Peace Conference, Pope Leo XIII. may bring the question of temporal sovereignty, and of his right to the States of the Church before the Powers. Such a consummation of the Conference would be an awkward one, although the government feels that King Humbert would have the support of England.

It is reported that the successful conclusion of the Franco-American commercial treaty was due to the direct intervention of President McKinley. The American negotiators considered the conditions too favorable to France and refused to sign, but the President insisted that the convention should be carried through out of gratitude to France's role in the Hispano-American peace treaty.

Governor A. D. Chandler of Georgia says the remedy for the race problem in the South can only be found in qualified suffrage. He says the ballot should only be entrusted to the virtuous and intelligent. He also says it was a mistake to clothe the Southern negro with all the rights, privileges, and responsibilities of citizenship without his being prepared for it.

The citizens of Philadelphia are preparing to present the citizens of Paris with a statue of Benjamin Franklin during the Exposition year. The statue will be a replica of the one now in Philadelphia which cost fourteen thousand dollars. It is intended to locate the statue at Passy, where Franklin resided when he was minister to France, over a hundred years ago.

Elihu Root, the new Secretary of War, assumed the duties of his office August 1. General Alger congratulated the new secretary most cordially and said, "With all my heart I congratulate you and the administration. You will find around you here men who will help in the arduous duties of your position. May God bless you and give you strength."

The House of Commons recently sat until three o'clock in the morning discussing the question of prohibition for Canada. The debate was on a resolution for the passing of a law favoring provincial prohibition. An amendment was offered in favor of national prohibition. The meeting, however, adjourned without voting on the question.

The situation in San Domingo is being watched with anxiety on the part of the United States. Information is received from Washington that Americans hold a lien on the whole of the island and collect and control all the customs duties. All the important enterprises on the island are the result of American capital.

By October 1 the Canadian canals around the St. Lawrence Rapids will be so far completed that vessels of three thousand tons burden can pass from Chicago or Duluth to the Atlantic. As a result the St. Lawrence route may become the main highway of commerce for coarse freight shipped to Europe from the West.

The total increase of our manufactured exports during the last fiscal year was forty-eight million dollars, and of this increase over twenty-three million dollars was in manufactures of iron and steel. The exports of iron and steel during the year were $93,715,951, while the imports of like character were but $12,098,239.

The official messenger says the results of the Peace Conference have fully come up to the expectations of the Russian government. The necessity for a solution of the Czar's proposals is admitted by all the Powers, and future developments will indicate the means to be employed in attaining the desired end.

An American citizen has submitted three claims for alleged indignities and loss suffered by him in Hayti. The question will probably be settled by arbitration. The case will be a novel one as Hayti trusts her interests to an arbitrator chosen from the United States—Judge Day, late Secretary of State.

General Russell A. Alger received a hearty welcome home on the afternoon of August 2. A special train carrying four hundred members of the reception committee met him at Toledo, O. Upon his arrival at Detroit addresses of welcome were made by Mayor Maybury and Governor Pingree.

President Wenceslao Figuerreo has taken charge of the San Domingo government since the assassination of President Heureaux. A new cabinet has been formed and no fears of disturbances are entertained. The new government will be recognized by the United States immediately.

Secretary Long has ordered the cruiser New Orleans and the gunboat Machias to San Domingo, as a precautionary measure for the protection of Americans and American

Digitized by Google

interests if any trouble should result from the death of President Heureaux, who was assassinated July 26, 1899.

Miss Lenora Jackson, the American violinist who is winning fame abroad, played before Queen Victoria at Windsor Castle recently. The Queen was so well pleased with the performance that she presented Miss Jackson with a jewelled star bearing the royal monogram.

It is reported that the gifts to colleges, seminaries, academies, and art institutions for the first six months of the present year amounted to thirty million dollars, more than double the amount ever before contributed for such purposes in the same length of time.

During the war with Spain Miss Helen Gould furnished a number of cots for the soldiers in Cuba. The men of the 6th Ohio regiment received a part of them, and in evidence of their appreciation they will present Miss Gould with a magnificent gold medal.

The National Museum at Washington has received from California the entire Hudson collection of Indian basket-work, numbering two hundred and fifty pieces, at least half of which would be worth from two hundred and fifty to one thousand dollars each.

At a recent meeting of the Samoan commissioners, both parties signed an agreement abolishing the kingship and presidency of the municipal council and agreeing to an administrator with a legislative council of three tripartite nominees.

The Equitable Life Assurance Company of New York has subscribed for two million dollars of Mexico's new five per cent bonds. The announcement created a most favorable impression in financial circles in the City of Mexico.

Congress, at its last session, appropriated four thousand dollars for the purpose of repairing the house in which President Lincoln died. This modest little house is visited yearly by thousands of tourists from all over the country.

The Board of Arbitration of Colorado has filed its report on the investigation of the smelter strike. The decision reached is a compromise and provides for an average increase of about ten per cent in wages of employees.

Rear Admiral Sampson has filed in the Supreme Court of the District of Columbia, a suit for prize money because of the battle of Santiago. The suit is similar to that recently entered by Admiral Dewey in the same court.

The statement has been made at Ottawa that it has just been learned in connection with the Alaskan boundary matter, that in 1893, Canada relinquished twenty-three and one-half statute miles of the disputed territory.

The production of iron ore in the United States for 1898, was 19,278,369 long tons. This is ten per cent in excess of the year 1897, and also a greater amount than has ever been mined by any other country in one year.

It is reported at Washington that Great Britain has taken the Alaskan question out of the hands of the Canadian authorities and will settle the difficulty independent of the Ottawa government.

For services rendered at the Peace Conference, M. Leon Bourgeois, the head of the French delegation, has been decorated by Emperor Nicholas with the order of St. Alexander Newsky.

Ah Yu of Shanghai, China, has been granted a pension of thirty dollars a month. He was formerly on Dewey's flagship Olympia, and is the first Chinese pensioner of the government.

As a result of a strike in Chicago by the union brick-makers of Cook County, work has been stopped on two hundred buildings, and ten thousand men are out of employment.

Rev. Gabriel Richard of Michigan, was the only Catholic priest ever sent to Congress. This was in 1823, and he served with distinction throughout the entire Congress.

The central Anti-Imperialist League has been organized in Chicago. Its purpose is to co-operate with other like bodies in arousing opposition to the policy of expansion.

The transport Indiana has sailed from San Francisco for Manila, having on board eight hundred recruits for the various regiments in the Philippines.

In his message at the opening session of the Congress of Nicaragua, President Zelaya commends the treaty made with the United States, April 20.

The fifth biennial convention of the World's Woman's Christian Temperance Union will meet in Edinburgh, Scotland, Monday, July 25, 1900.

It is reported that General Funston will stay in the army until the war with the Philippines is ended, and will not be mustered out with his regiment.

Major-General Lawton is to have command of the cavalry forces in the Philippines when the active campaign is renewed in the fall.

It is stated that nearly one hundred and seventy-five Congregational churches have adopted the individual communion cup.

Governor Chandler of Georgia, has issued an appeal to the people of the state to join hands and put an end to mob violence.

The natives of Malta desire home rule, and recently sent a delegation to confer with the colonial secretary in London.

With the permission of Secretary Long and other officials, a naval Young Men's Christian Association is being formed.

Models of all our world-famous warships will form a part of the American naval exhibit at the Paris Exposition.

Generals Toral, Bareja, and others are to be court-martialed for the surrender of Santiago de Cuba.

The treasury receipts for the month of July were $48,054,258. The expenditures were $56,573,000.

Admiral Dewey sailed from Trieste for Naples on the afternoon of August 1.

General Otis reports the capture of Calamba, July 27.

Entered at the Boston, Mass., Post Office as second-class mail matter.

"Peace be still!" our Father is at the helm.

MARY BAKER EDDY.

On Borrowing Light.

THE growth of students in the understanding of Christian Science is very seriously retarded by the practice of trying to borrow light every time they come to a dark place in their progress. In running hither and thither for advice or explanations, we are likely to get nothing but a medley of human opinions, which do not inform but confuse us. Even if the advice or instruction given were entirely good, it could little aid us. The Christian Scientist can make profitable use of very little wisdom over and above what he has acquired through the earnest struggle to prove the primary facts of Being.

Apologizing for the contempt Robert Burns showed for the unsolicited advice of pious friends in his youth, one of his biographers says that advice is very nearly worthless for two reasons: first, that only a fool needs it; and second, that one who is fool enough to need advice, would not be wise enough to heed it. This is merely a clever saying, which is really not true, but is the exaggerated shadow of a truth. The wisest men often seek advice, but even they make sparing use of it, for it often demands more wisdom to follow advice than to give it.

Our text-book, Science and Health, can be fully interpreted only by experience. What we learn from another's experience will not illuminate our consciousness to the perception of the deep spiritual meaning of our Leader's words unless we prove that experience true through our own demonstration.

Had the wise virgins given of their oil to their foolish companions, it is probable that the latter would have spilled it in the dark, for they slept until the midnight hour without attending to their lamps. So is it with the student of Christian Science. If he neglects to put what he knows of Truth into practice, he will be without light when the hour of darkness and doubt comes upon him. Then if he tries to borrow, he either cannot, or what he does borrow is quickly spilled. After vainly trying to find his way by borrowed light he will eventually have to make use of the dim light he can get from the little understanding which came to him as the result of his own experience, but which he discarded in the hope of borrowing from his teacher, healer, or neighbor.

There are times when counsel is needed, but even then it should if possible take the form of loving encouragement to search the Scriptures and the text-book for guidance. There is always great danger of imparting error, when one attempts to help a student of Science and Health to understand its teachings. Even though the one who explains may interpret a statement correctly, the student, being in the darkness of midnight, may totally misunderstand him, and go away with a distorted conception of the subject which will trouble him for months or years. When the student gets at the meaning of a passage through experience, *i.e.*, *demonstration*, he knows its meaning scientifically, and it will be an unfailing light in darkness.

Many absurd misconceptions in regard to the practical import of some of our Leader's precepts, have crystallized into laws of conduct with some students, and they firmly believe that these misconceptions are true interpretations of the teachings of our text-book. Such misconceptions could not become generally accepted in a place, unless some one personality had been set up as an authority and his word taken as law, instead of the Word of God demonstrated.

Let each search for Truth diligently by himself, and the Spirit will reveal it.

In these days the following Scripture would seem to have special significance: "The wicked flee when no man pursueth: but the righteous are bold as a lion."

One leading difference between Christian Science and hypnotism is that the purpose and effect of the former is to make people very wide awake; while the purpose and effect of the latter is to put them to sleep.

It is a remarkable fact that nearly every theologian who assails Christian Science, concedes that he knows many Christian Scientists who are intelligent, worthy people, and that they seem to live virtuous Christian lives.

We virtually deny the existence of God when we deny His infinite power and goodness, and we deny these attributes when we concede power to anything apart from God.

If constantly intent upon trying to be good and do good, there will be no room for evil to slip in.

The example of Jesus in overcoming death, is of little value to us so long as we refuse to follow his example in overcoming envy, jealousy, and malice, which are elements of death.

It is easy to distort the letter of any science, but demonstration prevents disputes.

Clergymen cannot harm Christian Science by preaching against it, nor can they help their own cause by so doing, but very likely they will harm their cause, for almost always there is some church member listening who has seen proof of the good that Christian Science does and dislikes unjust criticism of it by those who are ignorant of its true character.

It cannot be doubted that there is hardly a minister of the Gospel in the world who would not be glad to preach sermons that would heal the sick. There is just as good Biblical authority for healing as for preaching.

If doctors of medicine could save their patients from vice

Digitized by Google

and crime with the same dose they administer for disease, how glad they would be to do it! Christian Science is the only agency which combines both physical healing and moral redemption in its practice.

The Legal Aspect of Christian Science.

THE following opinions on the above subject were recently published in the *St. Louis Republic*. The writers are prominent and well known men in the business and professional world as well as in the ranks of Christian Science.

I am asked to give briefly what the Christian Scientists claim their rights to be under the law of the land with respect to their religion and the healing incident thereto. I might content myself with a very short answer to the effect that Christian Scientists claim that their rights are the same as those of other free-born citizens of the United States—no greater, no less.

They believe that it is as great a violation and infringement of their legal constitutional rights to seek by law, with penalties attached, to prevent them from exercising their religion, and the healing indispensably connected therewith, as it would be to compel an Episcopalian, a Methodist, a Presbyterian, or a Unitarian to become members of the same church, or to call in an allopathic instead of a homœopathic doctor in cases of sickness, or *vice versa*, just as it might suit the particular or present notion of the law-makers.

We claim that if it is constitutional, legal, and moral to enact laws which seek to prevent Christian Scientists from relieving men and women from moral, mental, or physical disease by the employment of their religion, that is directed to that end—just as Jesus Christ did—then, if at any time in the future the Christian Scientists should control the legislatures of the country or Congress, it would, for the same reason, be constitutional, legal, and moral to compel the rest of the people who may happen to differ from the Christian Scientists to employ Christian Scientists to relieve them from sickness, rather than the doctor's medicine they might prefer.

Thousands and thousands of men and women, myself among the number, both Christian Scientists and those who are not Christian Scientists, have been healed by the Christian Science healing from diseases which, from the medical standpoint were deemed incurable. Indeed, for the greater part, especially when first employed by any particular individual for healing, the cases relieved are generally those which have been given up by the doctors. Of course, people, after having been cured of what doctors consider irremediable diseases, and having become Christian Scientists, resort in the first instance to this mode rather than to the medical relief, which formerly had failed to help them.

Articles I. and XIV. of amendments to the Constitution of the United States, and Article II., Section V., Constitution of Missouri, undertake to protect the citizens of the United States in the exercise of religious freedom and to supply to them the equal protection of the laws. We invoke these provisions as fully insuring us in the exercise of our rights, not only of religion, but everything religion may bring to humanity, and we claim one of the main things that it brings in this mortal life is relief from sickness as well as sin, especially those forms and states of sickness, mental, physical, and moral, generally considered hopeless.

So far as the decisions have gone in this country, they have been to the effect that the ordinary laws which undertake to regulate the practice of medicine and surgery, requiring diplomas from colleges, etc., do not apply to the practices of Christian Science healing. State *vs.* Mylod (R. I., 1898), 40 Atl. Rep. 753; Wheeler *vs.* Sawyer, 15 Atl. Rep. 67.

There was a decision in Nebraska supporting a restrictive law which, however, has never been followed out by enforcement. The English decisions have been to the same effect. Regina *vs.* Thomas and Mary Ellen Wagstaff, 10 Cox's Criminal Cases, 530.

Mr. Jefferson says, "It is enough for rightful purposes of civil government for its officers to interfere when principles break out into overt acts against peace and good order." It will hardly be contended by those even the most violently prejudiced against Christian Science that their members have any tendency to "break out into overt acts against peace and good order."

On the contrary, I think it will be generally conceded by all fair-minded and intelligent persons who are at all acquainted with Christian Scientists that their practice, and certainly their conduct, is always peaceable and orderly. They teach love and good will not only toward God but toward man, all based on their recognition that God is the Father of all men, and therefore that all men are brothers, and hence equal before God and in His sight.

It may appear absurd to many good people that we should literally accept the declaration of Jesus made to man for all ages of the world, "Ye shall know the truth, and the truth shall make you free," but we claim that this sublime Truth is to be practically accepted in our lives, and that it is not a mere static declaration of an ideal enthusiast, but a sober, temperate statement of what can be verified in every-day life; and when Jesus said that the Truth should make us free we understand that we are gradually to be freed by the knowledge of the Truth from all the so-called ills of life, which of course necessarily include sickness as well as sin.

Up to the present time every effort to enact laws distinctly applicable to Christian Scientists has failed, and we rely on the average good sense and justice of the American people to cause all future efforts in the same direction to fail. But if any Legislature or even Congress should pass an act distinctly restrictive against healing by practice of Christian Science, then we have no doubt but what the courts would declare such law unconstitutional and invalid.

J. E. MCKEIGHAN.

Replying to your question as to the attitude of Christian Science workers toward the law, I can only say that the Christian Scientist is essentially a law-abiding citizen, not only as an observer of the statutes, but in the fullest recognition of individual rights.

I see from *The Sunday Republic* of July 9 that it is proposed to introduce a bill in the New York Legislature declaring "any person who shall persuade or prevent any person from calling to his aid the services of a regular licensed practitioner, shall be guilty of a misdemeanor, and that, in the case of death, where such persuasion or prevention has been employed, the person exercising such persuasion or prevention shall be guilty of manslaughter."

Should such a law be enacted, it would not interfere in the least with the practice of Christian Science healing. Recognizing as he does man's inalienable right to self-government, the Christian Science practitioner will not take a case or continue his ministrations except with the full consent of the patient. To do otherwise is considered malpractice. He is most careful to ascertain whether or not the patient applies of his own free choice for treatment, or as the result of persuasion, and unless it is clear that he is acting wholly of his own will, the treatment will not be given.

In the cases of children, the request for treatment must,

Digitized by Google

as a rule, come from both parents, and with the child's own consent and desire, if he is old enough to decide for himself.

There are thousands upon thousands of intelligent people in this country and in Europe who, from a standpoint of entire dissatisfaction with, and complete disillusion concerning ordinary methods of material medicine and surgery, are most deeply convinced through experience that the ministrations of Christian Science afford for them the most safe and potent remedy available for the ills of body and mind. Surely no one, himself living in the light and liberty of American citizenship, recognizing the constitutional rights guaranteed to all who come under the protection of this government, will say that those who prefer this treatment shall be prevented, either by statute or by public opinion, from having it, or be forced, against their will and best judgment, to call in a licensed practitioner of *materia medica.*

The Christian Scientist has enough faith in his fellow-citizens, whatever may be their convictions along religious and medical lines, to feel certain that no law will ever disgrace the statute books of this free land demanding of any citizen the surrender of his freedom, so long as the exercise of that freedom shall entail no hardship or loss of constitutional rights upon others.

Furthermore, Christian Scientists, knowing so well the superior benefits of this system, and that its work is done in the light of the largest liberty to all, look confidently for a change in public opinion concerning its practice, and the free grant of all fair minds that each shall judge for himself in these matters. Indeed, the change for the better in the past few years, as the principle and practice of Christian Science has become more widely known, is most marked.

A. P. DeCamp.

The following are my reasons for believing in the legality of the practice of Christian Science:—

1. It teaches God to be the Infinite, Intelligent Principle of all harmonious action and relation; that He is the Origin, Source, Cause, and Ultimate of all reality and existence, and that this Truth was demonstrated by Jesus in healing from sickness and sin, and he said, "The works that I do, ye shall do also."

Webster's definition of truth: "An established principle, a fixed law."

Webster's definition of Science: "Truth ascertained or made known; knowledge."

Christian Science is the truth ascertained concerning God and His kingdom through the Christ, the divine idea of God, of whom Jesus, the great Nazarene healer and prophet, was the living and practical embodiment, for he said, "I am the Way, the Truth, and the Life," and "Ye shall know the Truth, and the Truth shall make you free."

Free from what? Certainly not from Truth, for it is the knowledge of the Truth alone which makes free. Then it must be freedom from that which opposes Truth. Can this opposite be other than a lie or a falsehood, and thus a lie against God? Can Truth create error or discord in the principle or problem of mathematics? Here we see that the healing or curative agency is mental, for it is the knowing of the Truth that makes free.

2. God is Life and law of Life is divine. Can a man-made law be enacted or intruded in this land, whose foundation stone is religious liberty, to prevent a sane human being from practising the teachings of Jesus, or from having his neighbor intercede for him? Shall the poor sufferer be denied the Christ healing from sickness or sin when he has despaired of recovery at the hands of his physician, who, no doubt, has been faithful to his understanding, but has failed because he does not know the Law, the Truth that makes free?

3. The Christian Scientist never asks something for nothing, but practises the Golden Rule and the law of Love, equity, and justice, and believes the Master's words where he says, "The laborer is worthy of his hire." But you may say that he also says that "It is more blessed to give than to receive." Even so; then would we not be selfish indeed when giving, if we would not permit the recipient to share a like blessing by being permitted also to give in return, for no honest Christian will be satisfied to receive something for nothing.

James A. Logwood.

Power of Prayer in Healing.

The following communication is submitted on the subject, says the *Buffalo Enquirer,* and can be amply verified. The name of the writer is withheld at his request, but may be disclosed to any one doubting the story. The writer says:—

How far the Christian Scientists may be able to cure in case of maimed or broken limbs, or other organic diseases, I am unable to say, but in cases where the brain and the will power can be operated upon, I believe the powerful medium of prayer on a mind not altogether callous or unyielding to religious sentiment may cure where the physician would fail. Indeed, for the matter of that, in most all cases of sickness or disease, unless the patient has thorough faith in his physician and believes that his nostrums are going to help him towards recovery, the doctor might as well throw his physic to the dogs. Especially is this the case of women. "It is quite probable," says an eminent writer on this point, "that a female suffering from certain ailments might die at the hands of a physician in whom she had no confidence, while she would completely have recovered under precisely the same treatment under the care of another in whom she had implicit faith." Dr. Wende will hardly dispute this fact.

But to return to my own experience. As a boy of twelve years of age I contracted rheumatic fever with other complications, which left behind it a violent form of what is commonly known as St. Vitus' dance. I was then living with my parents in an old-fashioned cathedral city in England. To describe my condition for more than two years is almost impossible. It was simply horrible. At times I became so violent that my hands and arms would swing backwards and forwards like windmills. On one occasion I actually knocked out two of my teeth with my right knee. It was no uncommon thing for me to make my nose bleed with my own fist. A huge scar on the neck for several days testified to a burn caused by a brave and fruitless attempt to carry to my bedroom a lighted candle. I never appeared on the streets without a crowd following me, pelting me with stones and jeering at my misfortune. Once I had to be carried out of the cathedral for interrupting divine service, by violently gesticulating at the bishop while in the midst of his ordination sermon.

One day a consultation was held by three grave doctors. Dr. Benson, afterwards Archbishop of Canterbury, was present as a friend to my father, and one who took a deep interest in me for more reasons than one. In fact, he had visited me almost every day, sincerely deploring my affliction and trying in his kindly, sympathetic way to draw my thoughts to gentler and holier channels than they were wont to follow after being assailed on the streets with coarse jesting and stones.

My father and mother were both present at the consultation. I was not told who these three grave men were or what was the nature of their visit. Instinctively, I divined

Digitized by Google

their errand, and my thoughts being painfully drawn to my affliction by this consciousness I became very violent.

When they rose to go, I heard the three solemnly say to my father, "Incurable." Dr. Benson, who stood in the doorway, looked around and saw that I was intently listening. "Hush!" he exclaimed, "the boy has heard you."

Dr. Benson left the doctors, however, and immediately came to me. "It is no use disguising from you, my poor boy," said he, "that those three doctors say your case is a bad one. You heard what they said. Doctors do not know all things, and the best of them make mistakes. Now I am perfectly convinced, with God's help, you will get well, and very soon. Trust yourself in His hands." The reverend gentleman seemed to be much moved. I saw in his face written in unmistakable lines infinite pity and affection. I then knew why he had so often come to our house during my sad affliction, which had lasted nearly two years. I use the word "sad" advisedly, and without any desire to draw attention to myself, believing in my own heart there was no sadder case in the history of mankind than mine was.

But to resume. I remember the day well, when not yet fifteen years of age, I defied all human authority—when I set my teeth and said, "This shall be no longer." I had walked with the Rev. Dr. Benson through the green fields not far from our home. He never referred to my affliction or appeared to notice it. Gradually, by a wonderful tact I have often admired, he talked to me about nature and God, pointing out little bits of scenery as we walked along, and leaving me impressed with the idea that I was in His hands, the Creator of the vast universe.

The next day he called at the house and talked gently to me of his own schooldays, making me laugh at many droll jokes he had played on his tutors, though a few years before he had been himself head master of Wellington College. He always left me with a prayer in which he asked me to join, and which he uttered with such matchless expression as to leave me calmer and happier each time he came and went.

After many rambles in the fields, many happy talks, many quiet, earnest prayers, he who was afterwards to hold the highest office in the Church of England, second only to Queen Victoria, walked up-stairs at night with me to bed and said, with such a happy face that I can almost consider it divine in its sublimity: "My boy, you have had a very sore affliction. You have conquered it. Your will has once more obtained the mastery over you. You will never be troubled again. To-morrow you will walk out strong and well, and this will never return to you. So much can be done by earnest prayer. Let us now thank God for His goodness in restoring you."

From that moment I was convinced that my affliction had passed away. In the morning I said to my mother: "Mother, I am better. You thought I should never grow well. You see that arm? I can stretch it out now and draw it back again as I choose. I can walk across that room as firmly as father could in his best days. I am better. This will never return to me again. I feel stronger and better, and know now the cause of my whole trouble."

I never had a recurrence of this most horrible malady from that date. Our family doctor was absolutely amazed when a week or two afterwards I gave him an exhibition of dumb-bell exercises. A year afterwards I took part in many cricket matches, in which I made big scores for my county. Five years later I joined the English Volunteers, and later still served an enlistment in the United States Army. My career at school and college speaks for itself. I have my diplomas, which can be produced any minute. What Dr. Wende may have to say to this I cannot tell. I will give him the addresses of a dozen prominent persons any minute, if he is in any way inclined to doubt this story, or will hand them over to the *Enquirer* for verification.

A Corner-Stone.

WEDNESDAY, July 5, at 4.30 A.M., soon after sunrise, fifty of the Christian Scientists of this city gathered at the Stephenson Street entrance to their new church building which is in course of erection, and with brief but solemn exercises laid the corner-stone, a marble tablet, into the wall of the structure in which they soon expect to worship.

The marble tablet, inscribed simply with the date, 1899, covers a receptacle which contains a copy of each of the Rev. Mary Baker Eddy's writings and a copy of the Fourth of July edition of the *Marinette North Star*. The company assembled, Mrs. Laura Sargent read passages from the Old and New Testaments which were appropriate to the occasion, and also selections from Science and Health. The simple ceremony was followed by silent prayer and the Lord's Prayer, thus ending the exercises.

Above the corner-stone will be put another tablet five feet three inches long, which will bear the inscription, "First Church of Christ, Scientist." The building of the church is progressing steadily, and already gives an idea of the simple beauty which the finished structure will have.

It is of solid brick, is eighty feet by fifty feet wide, and is of the form and ornamentation adopted in all the Christian Scientist churches. The main wall will rise seventeen feet, then indents five feet and rises straight upward again five feet, where it meets the ceiling. In the centre is to rise a metal dome, in the top of which is a crystal "sun burst," which reflects the light to the auditorium through the glass roof below. Pews for 388 persons will be placed in the auditorium, though the room will easily accommodate double that number. The finish, inside and out, will be very handsome. It is hoped to complete it this fall.

"Mine enemies chased me sore, like a bird, without cause."—*Jeremiah.*

The Lectures.

At Eureka, Cal.

Ingomar Theatre was well filled Wednesday evening, July 19, with intelligent auditors who gathered to listen to the lecture of A. A. Sulcer, M.D., C.S.B., of Riverside, Cal., on the subject: "The Science of Christian Science." There were present citizens of Eureka, Fortuna, Rohnerville, Ferndale, Arcata, and other towns, special trains having been run from the various points to accommodate those desiring to attend. The train from Eel River Valley brought more than one hundred and fifty ladies and gentlemen. There were in attendance about seven hundred and fifty people, all of whom, with the exception of about twenty or thirty who found it necessary to move in and out of the

Digitized by Google

theatre, paid close attention to the speaker. There was a seeming desire among those who had gathered to listen and catch every word, that they might give the subject a proper hearing. The speaker was introduced by Mrs. F. W. Georgeson, as follows:—

In coming before you this evening to perform the task, new and rather difficult for me, of introducing the speaker of the evening, I am comforted by the thought that it is not necessary for me to break the news that you are to listen to a lecture on the much mooted question of Christian Science. Every great reform in the religious or scientific world, back to the time of the tragedy on Calvary, has met with opposition, stubborn resistance, or persecution, varying in degree with the civilization and characteristics of the people involved. Under these circumstances, it is not surprising that Christian Science, challenging both the religious and the scientific world to new issues, should meet with opposition.

Before proceeding to my task, I wish to mention two things which these lectures are not intended to do. They are not for two distinct reasons, for the purpose of coming back at our assailants on the old Mosaic, eye-for-eye, tooth-for-tooth doctrine. First, because this is not the Christ way, therefore not Christian, and anything less than Christian must be less than Christian Science. Again, because we feel no enmity for our brethren who have so mistakenly undertaken the task of passing judgment upon what many of them undoubtedly believe to be the doctrine of Christian Science. I have never yet seen or heard an onslaught against Christian Science. All efforts purporting to be such are in reality the attempt of some individual to prove his conception of Christian Science unworthy of consideration or respect, and I need not add that these malformations are quite generally entitled to all that is said against them.

Lastly, these lectures are not intended to make proselytes for the cause of Christian Science, as that term is commonly construed. You would not speak of proselyting one whom you might endeavor to make a student of the science of mathematics, and in the science of Christianity, where one knows only what he can demonstrate and must demonstrate what he knows, the term falls equally far short of the mark.

Christian Science invites sober, earnest investigation along lines similar to those required in the study of the natural sciences; and its guaranteed results if thus sought for, namely, health, freedom, and happiness, are surely well worth the effort required. This gospel is properly named, and all that the term implies—its full understanding is the work of eternity.

Nevertheless, thousands of earth's struggling mortals who have been freed from the bondage of evil are now ready to testify.

The dominant thought of Christian Science is love—God is Love. This is the Christian Science thought of God.

Ladies and gentlemen, it gives me pleasure to introduce to you Dr. A. A. Sulcer of Riverside, for many years a medical practitioner of the regular or allopathic school—a graduate of Rush Medical College, but now an earnest and efficient worker in the cause of Christian Science.

Daily Standard.

At Cripple Creek, Col.

A lecture on Christian Science by Judge William G. Ewing was delivered in this city Thursday evening, June 29, at the Opera House. There was an attendance of about eight hundred of our citizens, and we were very glad to notice a good percentage of men, who gave earnest and close attention to the address. The lecturer was introduced to the audience by Judge Seeds, who said.—

Ladies and Gentlemen:—We have met here this evening in response to an invitation of a religious organization known as Christian Scientists to listen to a lecture in support of their religious principles and creed. I know but little of their beliefs, and therefore can say nothing on that subject. But I am glad that we all live under a form of government that gives to each one of us the right to worship God in accordance with the dictates of our own conscience.

Each individual has some religious doctrine or creed, some belief by which he expects to obtain the great rewards in the hereafter. You show me an individual without the belief of religious principles or creed, and I will show you a poor citizen, one not fit to enjoy the blessings and principles of our government.

Eighteen hundred and ninety-nine years ago, was given to the world the Christ, who was without sin. In those days, when Herod was king of Judæa and Cyrus was governor of Syria, there went out the decree from Augustus Cæsar that all the world should be taxed. Joseph and Mary of the house and lineage of David, in consequence of this decree, were called to the little town of Bethlehem and there Jesus was born. Angels published his advent, shepherds worshiped around the Holy Babe, and wise men, guided by his star, came from the East and presented him gifts; gold, frankincense, and myrrh. But Augustus sat upon his gilded throne in the palace of the Cæsars, unconscious that in the far-off province of Judæa, in the humble village of Bethlehem, the Prince of Peace had appeared to purchase and establish a kingdom before which the gold and silver, the brass and iron of all former nations shall be as the "Chaff of the summer threshing-floors."

As I have said, I know but little of that religious organization known as Christian Scientists, but I desire to say to you that I know of no religious organization or sect that has been of benefit to mankind that does not teach the doctrines of Christ and take him as an example.

Ladies and gentlemen, I have the honor and take great pleasure in introducing to you the Honorable Judge William G. Ewing, ex-member of the Supreme Court of the State of Illinois, who will now address you.

JOSEPHINE T. MOORE.

At Neligh, Neb.

A lecture was given here Tuesday, July 11, by Edward A. Kimball, under the auspices of First Church of Christ, Scientist, and was largely attended. The weather was excessively hot and had been for several days, yet the Opera House was filled with our best people and the lecture was listened to most attentively.

Scientists were present from neighboring towns, and many of these contributed to meet expenses. There were in the audience both ministers and doctors. The county institute for teachers was in session here, so more than one hundred of our teachers had opportunity to attend and many did so, as well as professors. Our editors were present, and two papers made mention of the event. One remained silent. It is still the subject of much comment and discussion, and for a few days was the *one* subject for talk. The better class of people here is becoming thoughtful and respectful in its attitude towards Christian Science. The people see the fruits—*prosperity and peace*—manifested in our church work. Ours is the only church in town out of debt and in good repair, and these things speak loudly for Science.

Every bill of expense connected with the lecture was paid either before the lecture, or the morning following, and this was a new experience to those who had worked for us, as the rule in other church work is slow pay. Our church had quite a nice sum left. I think our demonstration will encourage others to try. We called for a lecture

Digitized by Google

last fall, but could get none until now. We raised part of the money then, and it was caught in a bank failure, yet when the time came, there was enough and to spare.

We have but twenty-four resident members, none of them wealthy as mortals count wealth, but all very much in love with Science. HARRIET E. WERNER.

Ministerial Problem.

Why do so few young men of commanding intellect and character enter the Christian ministry? There is little question as to the fact. It is even insisted that the proportion of able candidates is continually lessening. The explanation commonly offered is that the minister's office is no longer respected as it once was, or else that the spirit of the age is secular, until even denominational colleges prefer that their presidents should not be clergymen. Both explanations reduce to one: the ministry of the gospel is no longer a prize for ambition. One need not deny the decline of ambition for this sacred office; but still the question remains why strong men, who wish to serve their God and their generation, so rarely find their opportunity in the ministry. It is not just now a question of remedy but of cause.

At bottom is the voluntary system of meeting expenses. Every profession must yield a livelihood; but in no other profession is the pay so exclusively and conspicuously voluntary. If the lawyer's, physician's, or teacher's services are engaged, it is taken for granted that they must be paid for. The individual receives a service, and the individual must pay for it. But the chief offices of the minister are public, and the hearer of sermons, instead of being aware of individual obligation to hand over a fee, often feels that he is patronizing the preacher; and the preacher, in place of feeling that any individual owes him money for a service, may feel that he owes the individual thanks for liking his attempt to serve. His office has then lost its dignity, still more its sacredness. It has sunk to the plane of theatricals, concerts, shows. His part may be artistic, but it is rated as an entertainment. How topsy-turvy the situation is may be known from the vulgar impropriety of the questions: "How were you pleased?" "How did you enjoy the sermon?" "How did you like our minister?"

Is there any remedy for the loss of its attractiveness to the strong men who are so gravely needed at the present time? So far as the voluntary system is at fault, no remedy can be proposed except the modification of that system, and the only modification now possible would be the endowment of churches. Endowed churches would hardly choose their pastors by the treacherous method of candidating, and would carry their pastor safely over periods of depression or even unpopularity. Desirable, even indispensable, as it is to keep the churches under the control of their members, it is not now so widely accepted as self-evident that public worship must be maintained at the cost of the congregation. Wise students of city life are satisfied that only by means of endowments can churches be maintained by Protestants in the poorest districts of our great cities. It is a question whether they can be effectively maintained in any district without more or less aid from endowments. It can at least be stated without reservation that there is no minister among us who, though he may have an unfaltering popular support, would not feel more independent and more confident that his labors would survive him if his support came in part from invested funds.

Extract from an article by Prof. E. H. Johnson, D.D., in the *Watchman* (Baptist).

Put Your Hands in God's.

The days when everything is piled in upon you at once, —when every unfulfilled promise comes home to roost, and pecks at your conscience; when the bills all fall due; when all the clerks are cross; when a score of conflicting engagements press upon you with equal insistence; when callers flock in, and stay and stay; when your head aches and your brain quivers in every convolution; when you discover that you have not furnished enough copy by half a page, that the ledger won't balance by two dollars and forty-two cents, that the faucet leaks in the laundry, and the cook has been stealing in the kitchen, that the moths have got into your best dress, and here comes Mrs. Longwind to spend the day. Such times as that I mean.

Then there is only one thing to do: ring off. Let go. Loosen your hold. Put your hands in God's. Get away by yourself, out of the distraction of it all. If you can't do that, stop and think. Make an oratory of your soul. Talk it over with the Father. Yes: although you have time for nothing but, "Dear Lord, I am tired and confused; but thou wilt straighten it all out, and I will wait." Ring off. Drop the reins. Let go the plough-handles. Go away from the telephone. Enter into your closet and shut the door. From it you will come in an hour, a half-hour, a minute, with a head that has ceased throbbing and a heart that is at peace. You will take up again the wire of life, and find smooth currents running through it. You will give your message, and you will get your reply.

Christian Endeavor World.

The Grace of Humility.

Why is it that we so often dislike to hear humility spoken of as a desirable Christian virtue? We know it to be a grace of the highest order in point of fact, but many of us shrink a little from being called humble, having a sort of feeling that to be humble means willingness to be imposed upon unduly or assent to be regarded as inferior to others. This is neither necessary nor true. Humility is not self-depreciation. It is perfectly consistent with the highest and happiest proper conviction of one's own abilities and attainments. We ought to be modest. We ought also not to depreciate ourselves unduly. We ought to try to understand the exact truth about ourselves and to rate ourselves as nearly as possible just where we belong. Humility lies in accepting our own rank and situation morally, intellectually, and socially without objection or complaint, without jealousy of those whom we are compelled to admit to be superior to us, or contempt for others below us.

The Congregationalist.

Bishop of Bristol Suspicious.

Some people in England are afraid of the Christian Endeavor Society. A vicar of the Established Church in Bristol, the Rev. F. J. Horsefield, likes the organization and is president of the local branches, and was announced to preside at the annual meeting. Thereupon the Bishop of Bristol forbade him to do so. He remonstrated, when the Bishop yielded so far as to consent to his being present and making a speech, but forbade him to preside or to offer a prayer.—*The Independent.*

Wanted to be Sure.

It is needless to say that the following bit of sarcastic pleasantry from *Life* does not apply to the management

Digitized by Google

of our own Missionary Board: "I want to be sure," said the aged philanthropist, "that my money will, after my death, remain in this country where I made it, and the home of my adoption." "Have you thought of any way this can be fully assured?" inquired his lawyer. "I have," replied the philanthropist confidently. "I am going to leave it to a foreign missionary society."

The Living Church (Episcopalian).

Natural Relationships.

As a rule we do not begin to make enough of our natural relationships. We regard them as ties, whereas they are channels to be charged full of affection and inspiration and helpfulness.—*The Watchman* (Baptist).

How is the World Using You?

BY HENRY D. NUNN.

"How is the world using you?" is a salutation often heard. Your response could be pretty accurately inferred from the answer you might give to another question: "How are you using the world?"

Most people who complain that the world has used them badly have not been very conspicuous for their good treatment of the world.

To treat the world well, solely for the purpose of winning its smiles, would be toadyism, and would disappoint. It is true that the world is somewhat like a mirror, in that it usually gives you back frown for frown, and smile for smile; but it is a mirror that often plays evil tricks, for sometimes when you smile it will frown.

Emerson says: "The sour faces of the multitude, like their sweet faces, have no deep cause . . . but are put on and off as the wind blows and a newspaper directs." This is true, too, as every one knows from experience, but it does not excuse one for his contempt of the world. To use the world well is more than to toady to it. It is to use the world wisely, that is, to rise above it into the consciousness of the Divine order, constant and unchangeable, where the discords of self-centered sense cannot disturb.

It is a rule which never varies, that the man who consistently loves the world—after the manner of the Heavenly Father, who so loved it that He sent His son to redeem it—will have no complaints to make, even though the world fail to appreciate him, for he will have peace and holy joy in the midst of turmoil and contention.

One who depends upon the smiles of the world for happiness will be repeatedly disappointed. The world cannot confer happiness. It may give wealth, power, and fame, but happiness comes only with the understanding of the ephemeral nature of worldly things, and the permanence of the things of Mind.

Wealth, power, and fame bear the same relation to happiness that pianos, musical notes, and muscular energy bear to harmony. Harmony or discord may result from the application of energy to a piano, according to the musical understanding of the pianist. Happiness or unhappiness may result from the possession of worldly things, all depending upon the understanding of the possessor. Happiness is a harmonious condition of thought, independent of things.

When a man continually scolds about the way the world uses him, it is not by any means certain that the world is treating him shabbily, but it is certain that the man is not mentally harmonious. He has the wrong point of view of everything and is miserable, not for anything the world has done or left undone, but because his mind is not adjusted in harmony with the divine Law which Jesus epitomized: "Thou shalt love the Lord thy God with all thy heart, . . . and . . . thy neighbor as thyself." People rarely think of the mighty meaning of those few revolutionary words of the Master.

"Love thy neighbor as thyself," and you will not speak ill of him, be envious of him, be anxious to overreach him in a bargain or speak irritably to him. Loving your neighbor as yourself, you will not be miserable because he is earning more money than you—you will not feel injured by his injustice toward you, for love will cause you to pity him for his blind folly, and you will have a sincere desire to help him to an understanding of justice. Loving your neighbor as yourself, you will certainly not insist upon holding the outside seat on a street car, thus putting elderly ladies and other persons you are supposed to love to the embarrassment and trouble of squeezing past you.

A sincere effort to make this epitome of the divine Law the basis of thought and action would eventually lead one to the conviction that he must "seek his own in another's good." The thought which governs most of us is that each one must seek his own good, his own betterment, and let his neighbor take his chances.

If the rule of "every one for himself and devil take the hindmost," were a marked success in making even the foremost in the race happy, there would possibly be some reason for holding fast to it, but it is, and always has been, a marked failure. The people are beginning to awaken to the realization that selfishness defeats itself, and they gladly welcome the vigorous declaration which Christian Science makes that the system of living taught by Jesus is not impracticably idealistic, but is the only scientific system of living possible—that it is the only system which will make the individual permanently happy, while it at the same time hastens the establishment of peace on earth and the reign of good will universally among men.

Mary Baker G. Eddy was the first person in this age to discern the scientific nature of the teachings of Jesus. Theologians did not consider that Christianity was a science—that is, they did not dream that it could be demonstrated in this age as well as in any age past or to come, by healing the sick and works of like character. They relied upon argument backed by history to prove that Jesus and his disciples healed the sick by the sole means of a power given them by God. Christian Scientists who have gained the spiritual understanding of the Scriptures by studying Mrs. Eddy's book, "Science and Health with Key to the Scriptures," are proving the authenticity of the Scriptural accounts of healing by doing the same kind of works. There are thousands of Christian Scientists who are thus successfully proving the truth and power of Jesus teachings daily, and they are now found in almost every part of the world teaching and healing as the ancient apostles did.

The fact of healing, taken by itself, is not of the highest importance, but taken as a confirmation of the teachings of Jesus, it is of supreme importance, for we are encouraged thereby to try to prove all his precepts, even the one bidding us love our neighbors as ourselves.

Whenever a man feels that the world is not using him well, he will find by a rapid analysis of his thought that he would not be unhappy if only he were loving his neighbors as himself. To get a good survey of his thought, let him say: "Now, if I loved every man as myself, how would I feel about this matter?" He will find that the change of his point of view will do him good.

How is one to love a low, brutal, vulgar, thievish man as himself? I cannot imagine how one could possibly love a man if he thought of him as being low, brutal, vulgar, and thievish. Jesus did not love brutality or vulgarity, and he did not ask his followers to love such qualities. No

Digitized by Google

love can possibly be manifested until the Christian can to some degree put these evil qualities he sees out of his mind. When he does this there will be opened to him an invisible line of communication with the real man—God's man—who can always be found when one brushes away the evil appearances. It is safe to say that Jesus did not talk very much to prostitutes and thieves, for the prostitutes straightway became purified and the thieves honest, because his thought was so pure that it caused iniquity to flee.

Denver Times.

Reply to Dr. Jenkins on "Remarkable Delusions."

BELIEVING that Dr. Jenkins desired to be just in his remarks of yesterday, as reported in the *Kansas City Journal* this morning on the above subject, and not in any way to make an erroneous statement, I feel it to be my duty to correct him, and the mind of the public reached by him, with this statement (granted that it is remarkable that some thousands of nineteenth-century Americans can reverently stand to hear a letter read from a healer, too feeble herself to be present, in which they learn that they constitute "an assembly of human consciousness, garlanded with glad faces"—whatever that may mean, etc.). Had Dr. Jenkins read the newspapers carefully he would not have said this, for he would have known that Mrs. Eddy, to whom he refers, was physically strong and healthy, and did travel from her home in Concord, N. H., to Boston, and attended the annual business meeting of The First Church of Christ, Scientist, held in Tremont Temple on Tuesday, June 6, and while there addressed an audience that not only occupied every seat in this large auditorium, but also every inch of standing room. I was in the Temple at that time and I desire to say to you that in Mrs. Eddy I saw as perfect a specimen of health, in every sense, as has ever been my pleasure to look upon.

As to her mental condition, if you will read her address in last Wednesday's papers, as sent out by the Associated Press, you will find you need have no fears about this matter. Now, as regards the newspaper description of the audience. The doctor infers that because this enterprising reporter uses a phrase, not euphonious to his ears, in relating his impressions of what he saw at this meeting, that the people advocating Christian Science and attending its meetings are of a class usually called queer. Assuming that this interpretation is correct, then, from the standpoint of one who has been out of civilization for a long time and had never heard of electricity and its application, we would class a convention of electrical engineers in the same category, as the results of the practice of Christian Science are just as readily seen as the results of electrical engineering.

Nine-tenths of the criticism against Christian Science is that directed against a single individual's application of his understanding of it, and not against the principle itself. And, inasmuch as no human being to-day has put into practice as much as he or she knows of this principle, it is not to be wondered at that the perfect has not been attained by the individual advocate.

Because I do not know and apply all the principle of mathematics does not alter the fact that the principle is correct and can be proven by one who understands and demonstrates it. Mrs. Eddy did not attend the services at the Mother Church on Sunday and deliver her Communion address, but had it read for her, choosing to meet the members of her church at their annual business meeting. Her sense of justice is in this instance once more shown. The Mother Church of Christian Science has a membership of upwards of 14,800, nearly twenty-five hundred having been admitted last Sunday, the 4th of June, and in order to accommodate all who desired to attend this service, four meetings were held, beginning at 10 A.M., 12 M., 3 P.M., 7.30 P.M. In order that the same service be given at each hour, Mrs. Eddy would have had to be present at each of these four services.

It is certainly a revelation to learn through Christian Science, that disease and all human discords are not the realities of being, but simply a false human conception, and because man is learning this and his true relation to God, thus enabling him practically to apply the Scriptural injunction to "preach the gospel and heal the sick," some would try to make us believe that we are different from other men. If it is a good thing to preach the gospel of the forgiveness of sin, would not humanity be better off to know that the same God that could, in the beginning, create all that was made, has that same all-power to-day, notwithstanding the fact that theology has limited His power to the forgiveness of sin?

The practice of Christian Science to-day consists in demonstrating or proving that God forgives sin now in destroying it, and such forgiveness is attainable by every one by the simple act of deserting sin, which is its destruction. Also, in healing the sick, by the same method as used by Jesus. Thus showing mortals that they have been under the influence of a "remarkable delusion" for nearly two thousand years, in believing that sin, disease, and all human discords were realities. May all mankind, from the standpoint of Dr. Jenkins, "become deluded" with such understanding.

DR. CHARLES L. VAN FOSSEN.

Kansas City (Mo.) Journal.

The Beauties of Persecution.

BY WILLIAM BRADFORD DICKSON.

THE Scriptures declare that the wrath of man shall praise God, and this is not a simple assertion of human cause and effect, but a statement of divine Love, never failing in its action and finale.

Not many months ago, in the small city of South Bend, Indiana, a prominent Baptist minister announced that he would preach against Christian Science. The following Sunday found him in his pulpit, expatiating on a subject he knew nothing of. The immediate results of this erroneous effort were as follows: By sundown of that same day, one of his leading members, superintendent of the Sunday School and teacher of a large Bible class, was seated in the home of a Christian Science healer, making inquiries in regard to Christian Science healing for his daughter and wife, both of whom had suffered many things of many physicians, paying a big price therefor, and receiving little benefit. Within a few months from the date of the delivery of the sermon, both mother and daughter were healed, had withdrawn from the Baptist Church, and are now members of First Church of Christ, Scientist, of that city.

"Blessed are ye, when men shall revile you, and persecute you, and say all manner of evil against you falsely, for my sake."

These unusual results from his sermon caused this minister—a good little man—to open his eyes a little wider, and recently he informed the writer that after his return from his summer vacation, he intends to secure all the books on Christian Science, and make a thorough study of it—and we know the never-absent Christ heals blind eyes as effectually now as in the Messianic age.

A prominent Methodist minister in the same city followed in the footsteps of his predecessor, and lectured against Christian Science, whereupon one of his prominent members said, "I do wish our pastor would stop preaching about something on which he has no information: it seems to me to be unfair for him to present one side of the question only, especially when there is no one there to present the other."

Digitized by Google

A lady—an editor's wife, and a very prominent member of this same congregation—was accused by several of the congregation in the presence of the pastor, of attending some Wednesday evening meetings at the Christian Science church. She immediately replied, "Yes, indeed; and if more of you would attend these meetings and live up to the beautiful things given out in them, you would be better Christians." This lady still attends her church, and makes no pretensions, further than being cordially interested in Christian Science.

Christian Scientists have a boundless ocean of Love and an inexhaustible well of Wisdom ("Science and Health with Key to the Scriptures," by Rev. Mary Baker Eddy) from which to draw their supply of divine Intelligence wherewith to meet the angry surges of condemnation and vilification which roll in on their loved Cause, and for each successive wave of persecution they stand shoulder to shoulder around the beloved Mother of the Cause, and send back to the world an overwhelming flood-tide of bravery, loyalty, wisdom, love, and good-will.

A few days ago the writer passed by the beautiful Catskill Mountains. They stood out in the morning sunshine boldly majestic in magnitude, yet graceful and gentle in contour. But presently a mist rose up from the valley and obscured them. Some hours later, a radiant summer sun and a gentle summer breeze separated and dissolved the veil of mist, and again the majestic hills stood out in all their grandeur.

In like manner a sublime cause like Christian Science, or a God-animated, lofty, spiritual character, towering above humanity like the Himalayas above their foothills, may for a brief moment be hidden from the world by the mists of human hate, passion, and prejudice, but a few heavenly gales and a little of Truth's sunshine will dissolve earth's miasma, and reveal the grandeur and greatness of Love's own.

Miscellany.

Dead Fifty-Three Years. He Awoke Amazed.

Seneca County, Ohio, has the most remarkable example of a modern Rip Van Winkle ever known in this county. Mathias Steinberger, who lives with relatives on a farm in Jackson township, a few miles out of Fosteria, has recovered his memory and intellect after a lapse of fifty-three years.

He is a veteran of the Mexican War, and during that period was a member of Payne's Regiment of Pennsylvania Cavalry. He was distinguished for his remarkable bravery, and had numerous narrow escapes.

His regiment participated in one of the famous charges at the battle of Reseca de la Palma. While riding furiously along almost at the head of his company his horse stumbled and fell, throwing him upon a pile of rocks. He immediately lost consciousness, and for a time appeared to have lost all use of his back.

Temporary paralysis caused his comrades no little apprehension. He was taken to the hospital, and although he was able to relate the manner in which he was hurt, his memory and all power of observation left him from that time.

He was scarcely what might be termed an idiot, yet he was of no value to himself or anybody else. He lived the life of those who lived fifty-three years ago, and nothing was ever changed to him.

During that long period of mental aberration he frequently said that he was twenty-one years of age and that the next election he fully intended to cast his vote for General Taylor for the Presidency.

While he was watching in a half interested sort of manner, some workmen saw wood with a buzz saw near his home, he was struck on the head with a piece of flying wood and knocked senseless. He didn't recover for some time, but when he regained his faculties, a curious expression stole over his face, and he looked like a person awakened from a long sleep.

He had, it was ere long discovered, completely recovered the powers he had lost over half a century ago, from the effects of the blow on the head, and to-day made his first visit to Fosteria.

Although he has lived within a few miles of several towns for years, everything appeared strange to him, and his complete bewilderment at beholding electric cars, telephones in operation, and many improved facilities for commerce and general traffic, was laughable, had it not been that those who knew the cause were disposed to entertain sympathy for him.

He wandered around town with as much interest as a child would manifest in attending its first circus. As he finally climbed into the wagon to journey home again, he remarked that the world had got so far ahead of him he feared he would not live long enough to catch up.

Philadelphia Inquirer.

Li Hung Chang's Poisoned Cakes.

Of Li Hung Chang numberless stories are told in Chinese society. Now and then one reaches this country through our consuls to China. Nearly all are flavored with that strange Oriental atmosphere which is so puzzling to our Western civilization.

On one occasion when the Premier was having a bitter fight with some of the more conservative members of the Tsung Li Yamen he received as a present a magnificent cake, which he had reason to suspect contained poison. He put the cake aside and set all his powerful machinery to work to find out who was at the bottom of the plot. The investigation was partly successful, the crime being traced to three men, of whom one, at least, was absolutely guilty. Li had the trio arrested and brought to his yamen. When they arrived they were ushered into his presence and were received in his courtliest manner. The cake was produced with the remark that "politeness forbade his tasting it until the three generous donors had had an opportunity to enjoy its excellence." Li cut the cake and one of his servitors handed it to the unwilling guests. Each took a piece and ate, or pretended to eat it. One crumbled the pieces and let them fall upon the floor, but the other two ate calmly without manifesting any emotion. Ten minutes and the two men began to show symptoms of suffering. Li smiled benignantly and said to the man who had not eaten, "Your wisdom is so great that I am compelled to preserve your head as a souvenir of transcendent genius."

The man was removed and promptly decapitated. To the other two the Premier remarked, "The cake that you are eating is not the one you sent, but one which I had my cook imitate. The poison from which you are suffering exists only in your imagination. I know of no way to cure your present pain except by letting you share the same fate as your friend who has just left the room."

As they were led away the statesman said to his retinue. "It is a pity that a man who can eat a deadly corrosive poison with an unmoved countenance should so misapply the talent wherewith heaven has endowed him."

Philadelphia Press.

Put Him to Sleep.

A Topeka man was recently troubled with insomnia. He thought that some young medical student would be glad to take his case for the practice there was in it and a small fee, if any. He sought out a medical student, who seemed

Digitized by Google

to have the proper appearance, and laid his case before him.

"I think this prescription will be just what you need," said the coming practitioner. "Three at a dose."

"Pills?" queried the invalid.

"Yes, but just the kind you need."

"How often shall I take them?"

"When you feel as if you needed them."

The patient took the prescription to a nearby drug store and had it filled. The pills were placed in a small box and wrapped up. The man took them home and absent-mindedly tossed them on top of the bureau.

He went to bed that night forgetting all about his ailments and the pills. He was unable to sleep and thought that perhaps the pills would bring Morpheus to his rescue. He got up in the dark, groped around for the box, found it, unwrapped it, and was surprised to find but three pills. He took them and returned to bed and was asleep in a few minutes.

He met the young student on the street the next day and told him of the wonderful effect that his remedy had produced. The young hopeful was quite elated over his success. The man returned home that night. During the evening's conversation his wife asked him if he had seen anything of a box of collar buttons that she had purchased the day before.

"I put them on the bureau," she said, "but the box has been opened and they are gone."

Topeka State Journal.

Anti-Vaccination Crusade.

LONDON, July 28.—An interesting case, the outcome of the anti-vaccination crusade, was opened in the Court of Queen's Bench to-day, when the Leicester Guardians, consisting of thirty-five gentlemen and five ladies, appeared to show cause why a mandamus should not be issued to compel the appointment of a vaccination officer. The Guardians were elected under a pledge to resist compulsory vaccination. During the journey of the Guardians to London crowds of sympathizers met them at various stations and loudly cheered them. Upon their arrival at London they were met by huge crowds, who cheered the "Leicester martyrs" and accompanied them in procession. The court mandamused the Guardians.

Boston Evening Transcript.

A Very Disagreeable Job.

The people who are determined to wipe the Christian Scientists off the face of the earth find it a very, very disagreeable job, for the reason that the Scientists wont quarrel. You can go ahead abusing them for a year, and they smile a meek, forgiving smile, and decline to call you any pet names in return, and the consequence is that sooner or later you feel ashamed of yourself. Whatever may be said about the Christian Science plan of treating disease, the fact is that the Scientists are an exemplary lot of people, and they deserve admiration. There is in Nebraska an old man who was always as quarrelsome and cranky as a bear with a sore head until he became a Christian Scientist. Joining that church, a complete change appears to have been wrought in his character. He has developed into a most agreeable man, and it is a pleasure to meet him and talk with him about the weather and the uitlanders, whereas it used to be an ordeal to have to say howdy to him.

WALT MASON.

In the *Nebraska State Journal.*

The *Journal* is continuously screaming at Christian Science, and the victims by death in the using of it. Does the *Journal* ever mention the victims by death of the regular practitioner? Never. What do these *Journal* writers actually know about the matter? Positively nothing whatever. Let the question be settled by a post-mortem in every case, and we can then see how many men are positively killed by regular physicians. In spite of the writers of the *Journal*, there is a principle of truth in the doctrines of Christian Science.—*Book Notes.*

The *Christian Register,* in commenting upon the charge against Mrs. Eddy's conduct of Christian Science, because she makes a vast income out of it, says, "The defence made by her friends is the same as that made by the friends of Mr. Moody, viz., that in both cases the money received is administered as a trust and spent for the benefit of the cause they serve. If the people who give the money know what they are doing, no one else has any right to complain."

The *Pilot* [Roman Catholic Organ] in alluding to the efforts in New York to squelch Christian Scientists, says: "The citizens of the United States must be protected in the exercise of their religion; but society must also be protected against religious dementia and dangerous superstitions."

Some one has said, "Christian Science is destined to one of two things: Either it will accomplish an all-conquering success and sweep the earth with its power, or it will fail utterly. Its claims are extraordinary. It is more than a creed. It occupies no middle ground of compromise."

Boston Evening Transcript.

Judge Dustin of Ohio says: "I am not yet a believer in Christian Science, but I am a believer in fair play, and in giving every honest man sincerely desirous of doing good to his fellow-men a respectful hearing upon any subject."

Boston Evening Transcript.

The *Christian World* says that a Celestial gave his reason for not becoming a Christian as follows: "Me go to Protestant man, he say 'Catholic man go to hell-side.' Me go to Catholic man, he say 'Protestant man go to hell-side.' Me stop with my own joss."

The *Sunday School Times* says: "Most victories are secured in advance. Jesus said, 'I have finished the work that Thou gavest me to do,' though the death on the cross was waiting. The victory of Calvary was won in Gethsemane."

To the Spirit.

BY CHARLES GIBSON.

GREAT Spirit, hear me as I rove
Through field or forest, woods or grove,
Through wind encircling woods of woe,
Or flee from an approaching foe:
Great Spirit, help me as I rove,
To conquer wickedness with Love.

Behold! There is a wak'ning voice,
Lipped in its half immortal choice,
That sings from the surrounding shade,
And reaches oft the sunny glade.
Behold: the songs upon the wind,
Ring with the breath of life, behind.

Great Spirit, thy divine refrain
Would turn these mockeries of pain
From dull despair to notes of joy,
To Life, and find our childhood's toy.
Great Spirit, breathe, and long remain
Love ruling earth's enshrouded fane.

Questions and Answers.

If God is Love and knows no ill, in what sense is it true that "whom the Lord loveth he chasteneth"?

A Subscriber.

That God is Good and sends no evil upon man, is one of the fundamental doctrines of Christian Science. When man learns that suffering is not of God he has a stronger desire to know God, and also to draw nearer to Him.

Error in some form is the cause of all suffering. It is a law, more or less understood and accepted by all, that error will sooner or later result in discord. Two things operate to uncover error, *i.e.*, cause it to be seen as error —Truth and suffering. Error is simply a false sense of that which is true. An error in mathematics is a false sense of mathematics; a discord in music is a false sense of music. So all evil is but a false sense of being, even though it seems and claims to be real. Whatever causes man to see error in its true light brings him nearer to Truth.

Truth is ever-present and is constantly asserting itself. While Truth is not the source of discord, yet it may seem to be the immediate cause of mortal man's suffering, because it uncovers the sense of error which he is indulging. Thus Truth may hasten, and thereby shorten, the suffering which is caused by error.

To illustrate. Suppose you are on a strange road and, as you think, traveling toward a certain city. You are happy and joyous because you believe every step brings you nearer the end of your journey. You meet a stranger. He knows you not nor where you are going. He incidentally mentions that a few miles down the road he passed through a certain village. You at once recognize you are on the wrong road, for this village is in the opposite direction from where you thought you were going.

Now there is a sense of discord whereas a few moments before all was harmony. Is this stranger the cause of your suffering? Yes, and no. While it may seem that you suffer on account of the stranger, yet in reality you suffer because you are on the wrong road. The stranger, by speaking the truth, hastened your suffering and also shortened it. In an hour's time you would have arrived at the village and learned for yourself that you were on the wrong road. You would have been farther from your destination and it would have required just that much longer for you to retrace your steps. Thus the stranger, in total ignorance of your error, by simply declaring the truth hastened the suffering but also made it possible for you to turn in the right direction sooner than you would otherwise have done.

Thus Truth is a constant rebuke to all error, though it has no consciousness of error. At some time in his experience mortal man feels the rebuke and error is stripped of its disguise that he may be able to part with it. It is in this way that God chastens His children.

He who loves God most, soonest feels the chastening influence of Love which instructs him in the way of righteousness. The best musician soonest detects a discord, because he is nearest the principle of harmony. What is harmony to others causes him to suffer, because to his sense it is discord. Thus the one who is nearest the Principle of all good is soonest rebuked for the indulgence of error and if he gives earnest heed to the rebuke, he is most speedily saved from the effects of evil.

What is meant in Christian Science by "unconscious thought"?—A student of Science and Health.

Physicians speak of the sub-conscious mind and define it as "that part of the mentality which carries on such involuntary actions as the circulation of the blood, the digestion of the food, etc." Thus it is recognized that mind governs the body absolutely and, in its government, it acts unconsciously as well as consciously. Because the action of mortal mind is not fully understood, many effects produced by it are attributed to matter.

Each mortal mind, ignorant of Truth, acts in accordance with the general law of mortal belief. This accounts for the development of disease and other discords of which the person had never thought.

In Christian Science man learns that it is not enough for him to be ignorant of the claims of error and their operation. He is influenced by them in belief, until he gains that clear conception of Truth which enables him to *know* why he cannot be controlled, consciously or unconsciously, by error in any of its forms. This realization of Truth is the only place of safety.

Metaphysical Healing Efficacious in Bad Burn.

THERE was the usual large attendance, and the usual interesting accounts of works of healing from sickness and sin were given at the Wednesday night meeting at Christian Science hall last evening. Among the speakers was the leader of the work in Paris, France, the president of the St. Louis Church, and representatives from Philadelphia, Boston, Chicago, and elsewhere. One speaker confessed that he had been an infidel, had scoffed at the Bible and religion; that Christian Science had led him to Jesus, helped him to love the Bible, and given him a God of Truth and Love. The principal of one of the St. Louis schools, having twelve hundred pupils, bore witness to the value of the study of Science and Health for teachers, and declared that Christian Science had helped him to be a better teacher and a better citizen. Another teacher, who was healed, told of her increased efficiency through the study of Mrs. Eddy's works and the great help to herself and to others that had come therefrom. A letter was read from Rev. Mr. Reynolds of Lancaster, telling of the progress and growth of the movement there, and another letter from a prison convict related his healing from sin, saying: "I can truthfully say that I have been immensely benefited, morally, mentally, and physically. I can faithfully promise that my life on my release from this institution will be one of loyalty to God."

An invitation to attend the opening services of the new church in London, Ontario, was read. The interesting information was given that through the kindness of Mrs. Eddy, the following works, of which she is the author, namely, "Science and Health with Key to the Scriptures," "Miscellaneous Writings," and "No and Yes," had been gladly received by five of the public institutions of Concord.

The meeting concluded with a remarkable case of the instantaneous healing from the painful effects of a serious burn occasioned by hot fat being accidentally poured upon the head and neck of a Mr. La Force of Concord.

In corroboration of the testimony above referred to, relating to the cure of Mr. La Force, may be cited the statement made by Mr. La Force himself to a representative of the *Monitor*, who called upon him at a Capitol Street restaurant where he is now employed.

Mr. La Force is a young man about thirty years of age, by profession a cook. He is not over given to talking, and his statement was made only in response to repeated questions—which, it should be added, he answered frankly and fully.

He said that he was employed last week at the Jackson House, on Park Street, and that last Thursday morning he was engaged in frying eggs for breakfast. A pail or kettle of water stood on the stove and as he moved the frying-pan—full of boiling fat—a few drops of water

Digitized by Google

slopped over into the hot fat. Mr. La Force moved suddenly to escape the bubbling fat which the water produced, and in so doing he hit the handle of the frying-pan in such a manner that its intensely hot contents were thrown into the air and fell upon the right side of his head and neck.

His agony was dreadful and the household remedies which were applied gave him no relief whatever. A lady at the Jackson House advised him to try Christian Science healing, and he did so, though he admits having no previous knowledge or experience with metaphysical healing.

He went to the Christian Science Hall on North State Street and asked the resident practitioner to give him treatment. His pain at this moment was positive torment, he says, and yet within a half hour he was back again in the kitchen at the Jackson House attending to his work. His pain was all gone and the burned places on his head and neck could be touched and rubbed without the slightest inconvenience. To his associates at the Jackson House he said, "I am all right!"

And he has continued "all right." The marks of his burning are plainly to be seen as indications of their genuine character, but a rapid healing of tissue has taken place with every indication that no permanent scar will remain. He has pursued his daily work without interruption, and has had only the one treatment which he had immediately after his injury. His case is justly held by Scientists as a remarkable evidence of the instant and permanent efficiency of metaphysical means of dealing with pain and injury.

Mr. La Force's statement to the *Monitor's* representative was made in the presence of several witnesses, and its authenticity is undoubted. Mr. La Force, as has been said, is not a voluble young man, but he speaks with the directness, emphasis, and clearness of one who bears witness to facts, confining himself to those things only of which he has personal knowledge. He has no theories. He was in pain and was freed from it.

Concord Evening Monitor.

Healed by the Little Book.

To my thought the most beautiful demonstrations that are given us through the always helpful columns of our monthly messenger and our weekly watchman, are those in which the healing came as a natural consequence of reading and assimilating the wonderful words of Love and Truth contained in "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, our counsellor and guide.

These demonstrations prove to all whose ears have not waxed gross and whose eyes are not holden that the revelation which came from God, through this chosen one, is the Truth, the whole Truth, and nothing but the Truth.

The great good which the "little book" is doing has been brought to my mind by a case which I had in my own practice.

Some time ago there came to me for treatment a dear woman who was suffering the torments of mental anguish. While talking with her, and listening to what she had to say, I was fully convinced that the words of our text-book would heal this hungry heart. I felt strongly impressed to offer her the book for her healing, rather than to take the case for treatment, and I did so.

The dear one had her spiritual eyes opened then and there, and took the book away with her. The healing came from the reading of the book alone, and with it "the new birth." "Old things have passed away, behold all things have become new." She lives in the new life, an example of the impersonal healing which our text-book is doing everywhere.

Soon after she came into the understanding of the Truth she felt it a duty to tell the leader of a large Bible class of adults of which she had long been an active member, that she was attending the Christian Science church, and desired to sever her connection with the class.

Acting in accordance with his sense of what was right, he endeavored to dissuade her from taking the step. To prove to him that she was on the right track, she told him that Christian Science had done for her what the church had failed to do in eleven years. It had healed her of a chronic sin, from which she had prayed honestly for years to be delivered.

This was unanswerable, and to his credit be it said, he kindly remarked, "If these people have the Truth, we all want it." ELIZABETH J. FULLER, Brockton, Mass.

Appreciation for the Sentinel.

Dear Sentinel:—If we are looking in the right direction for light, we cannot but see it. Sometimes the mists of error seem to obscure it, but they are fleeting, and if we continue to look we shall even be able to see through them—see their nothingness.

Our brave, dear *Sentinel*, supported and encouraged by its big ("big with blessings"—Science and Health) brother, the *Journal*, is keeping faithful, loving guard over the great army of Christian Scientists. It is a *Sentinel* indeed, and I feel so thankful for the new By-law that has been given us in regard to the members of the Mother Church being regular subscribers to these two publications. I am glad to be able to see the wisdom of this, and also that it is a privilege as well as a benefit to comply.

May we all come to see more and more that these two dear friends, the *Journal* and *Sentinel*, do not come to us from persons or personality, and that it is not to such a source that we owe the duty of owning them; but that they are gifts from God that we cannot afford to be without.

SARAH M. KELLY, Minneapolis, Minn.

Editor Sentinel:—I have received your estimable paper in response to my subscription and shall not cease to regret I did not make it mine from the first number of its publication.

I am deeply interested in Christian Science and am one of the multitude who is filled with gratitude to Mrs. Eddy for this mighty Truth which she has brought forth to a waiting world. All that the press or *materia medica* can do, cannot hinder the march of Science. The bitterness that has been heaped upon the spiritual woman, will in the end redound to the glorification of the Cause, for all thinking people want to investigate for themselves, and Truth can withstand all opposition and will prevail.

The *Journal* and *Sentinel* are filled with Scientific articles, and the healing power of Truth to which many testify, is indeed marvelous.

LOUISE B. WILLIAMS, Cramer Hill, N. J.

Notices.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

All correspondence with the clerk of the Mother Church on matters pertaining to his office, should be addressed to William B. Johnson, C.S.B., 95 Falmouth St., Boston, Mass.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5 75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1808. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2 50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Boston, Mass.

Published by the Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of the First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., AUGUST 17, 1899. Vol. 1 No. 51

The World's Noblest Book.

The Bible as Literature and as a Religious and Ethical Guide.

IN an address at Union College a few years since the late Charles A. Dana, veteran editor of the New York *Sun*, gave this advice to the students: "As to what books you should read, the most indispensable, useful, and effective is the Bible. There is no book whose style is more suggestive and more instructive, none from which you can learn more directly that sublime simplicity which never exaggerates, which recounts the greatest event with solemnity, but without sentimentality or affectation; none which you open with such confidence and lay down with such reverence; there is no book like the Bible."

Often is it spoken of as "the noblest book in the world," and with reason. Considered simply as literature, it is easily above all other writings. Look at its style. Where can you find its superior? Where its equal? Take the diction. Even in the English translation, how simple, accurate, and beautiful! In the original Hebrew and Greek, how rich and melodious! What majesty of conception and utterance in that psalm where the psalmist considers the heavens the work of God's fingers! What sylvan music ripples through that poem which sings of God as a shepherd and of green pastures and still waters, symbolic of tranquillity and satisfaction, as His ultimate gift to man. Catch the pure melody that streams from Paul's chant to love! Look upon that grand word picture of the new earth which is to come out of the struggles and tears and prayers of the ages, where there is to be no sorrow, no pain, no clashing, no fear, but love and joy and peace and spiritual triumphs.

Run through the Bible in this way, pausing before these and numerous passages of similar loveliness and power, and you cannot deny that this grand old book contains some of the noblest poems of the world, and has a style unsurpassed in literature.

✙

So fine a man of letters as Mr. Charles Dudley Warner not long ago said, "Wholly apart from its religious or from its ethical value, the Bible is the one book that no intelligent person who wishes to come into contact with the world of thought and to share the ideas of the great minds of the Christian era, can afford to be ignorant of. All modern literature and all art are permeated with it. There is scarcely a great book in the language that can be fully understood and enjoyed without this knowledge, so full is it of allusions and illustrations from the Bible. This is true of fiction and poetry, of economic and of philosophic works, and also of scientific treatises. It is not at all a question of religion or of dogma, it is a question of general intelligence. It is in itself almost a liberal education, as many great masters in literature have testified. It has so entered into law, literature, thought, and the whole modern life of the Christian world that ignorance of it is a most serious disadvantage to the student."

Take the thought of the Bible. Though profound, it is as clear and pure as the waters of those wonderful lakes whose fathoms of depth only serve to bring the treasures on the bottom nearer, and make them the more beautiful. The opening verse of Genesis prophesies the profound thinking which the language of Jesus and Paul finally fulfils. In saying that "in the beginning God created the heavens and the earth," the writer struck the keynote of the universe. The final word of science and religion will not be different from the first word of the first book of these Scriptures.

✙

You may open any book you please that pretends to deal with the fundamental phases of things, you will come back to the Bible and say that it excels them all. Far be it from me to ignore or demean the ethical worth and intellectual power of the sacred books of the Buddhists, Brahmins, Mohammedans, Chinese, and Persians; but acquaintance with their very finest passages satisfies me that the scholarship and religious criticism of the world is eminently just in rating our Bible, particularly our New Testament, as greatly superior in thought and spirit to any of the Bibles of the so-called heathen peoples.

Far be it from me to forget the noble precepts and the noble lives to be found in literature outside the Bible, but all that is good there is found here, and more. I can well understand why the best literary minds of our age are declaring that he is not an educated man, not a scholar, not one of the literati, who is ignorant of the Old and New Testament literature.

Turn, please, from the Bible as literature to the Bible as a religious and ethical guide. Here it is in its proper and preferred element. Here it defies its competitors to approach it in grandeur and purity and inspirational force.

What are its themes? Does it deny the existence of God, the immortality of the soul, the freedom of the will, the preciousness of life, and the fruitfulness of character? Or does it breathe like an exalted soul with assurances of the reality and nearness of Deity; sing like a lark on a May morning of the sweetness and happiness of living; trumpet, in celestial tones, that character is highest and eternal; and rend the veil between this and another existence, setting at rest all hearts that long to know if the night of the grave has any morning?

Copyrighted, 1899, by Mary Baker G. Eddy.

To ask these questions is to answer them. You know on which side the Bible stands. It is a book which never goes wrong about pride, about lust, about vanity, about submission, about obedience, about reverence, about love—its teachings shine brighter on these subjects from beginning to end.

But the teachings of the Bible, superior as they are, are surpassed by the lives it records. Take these as a whole and where will you find a nobler group than the Old and New Testament characters? Has Joseph been excelled among the prime ministers of nations? In statesmanship, has the world surpassed that of the old prophets? "Why," said Henry Ward Beecher, "I am disgusted when a man thinks as he reads Isaiah and Jeremiah, that his business is to see whether what they said came to pass. These were moral statesmen. Geniuses of rectitude were they that rose in times of distemperature, and bore witness for truth and right. Magnificent men they were. Their heads were lifted high above the age in which they lived."

Find, if you can, a preacher truer to his office than Nathan or Paul; a father tenderer toward his son than David; a daughter-in-law more utterly consecrated to her mother-in-law than Ruth, and friends so entirely wrapped up in each other as David and Jonathan. And when it comes to the central figure of the Bible, as he is the leader of the world to-day, how symmetrical, how glorious, how transcendent his character! It is prejudice indeed that can so blind a man that he claims to see blemishes in the life of Jesus. The broadest, keenest, rarest minds of the race have united with Tennyson in saying:—

> Strong son of God, immortal love,
> The highest, holiest manhood thou!

The teachings and examples of the Bible lift it to the pinnacle of sacred books, and make it truly the spiritual light of the race. And while a few scoffers would traduce it in the land where its influence is most potent and benign, it silently works its way into the palaces of formerly hostile monarchs and takes firmer hold upon the conscience of the world.

And this noble book is dear to countless hearts. Its consolations are great. This night a prodigal son shall read the story of that prodigal of long ago, and come to himself and to his father. This week a woman of shame shall fall at the feet of Jesus and be lifted up by the same sweet words that revived the womanliness of that sinner of the past. This month a man that you and I may know will go under with a crash, and watch the gains of years of toil melting before his agonized eyes, only to gain new hope and new courage from his trust in the promises of the Bible. Before many days some one we love will hear the knock of the death angel on his door, and feel the dearest friend in the wide, wide world slipping from his grasp—and then will come those wonderful words from Judæa: "Let not your heart be troubled: . . . In my father's house are many mansions: . . . I go to prepare a place for you. . . . I will come again and receive you unto myself; that where I am, there ye may be also."

Oh, the Bible is a book of sympathy and pardon and hope and cheer. Its soft, divine light trembles down into the darkest hearts and darkest places and chases the gloom away. There are chapters in it that have been angels of mercy here on earth from immemorial days. It is too great and grand and helpful a volume to be despised or neglected. Search the Scriptures, for they will tell you the way and the truth and show you life eternal.

REV. HENRY ROSE, B.D., Auburn, Me.

St. Louis Globe-Democrat.

Items of Interest.

One of the worst storms ever known swept over the island of Porto Rico August 8, entirely demolishing many of the towns, destroying many lives, and not less than one hundred thousand of the inhabitants were rendered homeless. President McKinley has directed that everything possible be done to relieve the distress of the island. Secretary of War Root sent an appeal to the mayors of all cities of more than one hundred and fifty thousand population, soliciting contributions for the relief of the sufferers.

The recommendations made by the State Board of Arbitration, although satisfactory to the striking smeltermen, did not help the situation in Denver. The smeltermen regarded the terms of the decision as a fair compromise and were willing to go to work. The managers, however, are not willing to accept the decision, and a settlement of the difficulties seems to be farther off than ever, consequently many of the smelters have been closed indefinitely.

The court-martial trial of Captain Dreyfus at Rennes, France, was begun August 7. The daily sessions of the trial are held from 6.30 A.M. to 12 M. The first session was public and Captain Dreyfus was the first witness examined. He vehemently asserted his innocence and excited much sympathy on the part of those present. The following sessions were kept secret until Saturday, August 12, when public sessions were again resumed.

Miss Lillian Clayton Jewett, a Boston young lady, conceived the idea of going to Lake City, S. C., and bringing the Baker family, who were the victims of a mob last February, to Boston as an object lesson. She did so. An enthusiastic meeting was held August 9, and many stirring speeches were made. Four thousand people attended, and there were in the audience as many white people as colored.

Aguinaldo issued a decree dated July 27, closing the insurgent's ports to all vessels flying the American flag, and inviting vessels under other flags to visit them. General Otis issued an order, August 10, closing all the ports in the hands of the insurgents to inter-island traffic. Vessels under foreign flags cannot visit these ports without running the blockade.

The report of Commissioner of Pensions for the fiscal year ending June 30, 1899, shows that out of the appropriation of $140,000,000, the disbursements were $138,253,923. The total number of pensioners on the roll June 30, was 991,519. During the last year 40,991 names were added to the roll, and 43,186 dropped, a decrease of 2,195.

The steamer Roselle recently arrived at Vancouver, B. C., from the Klondike, having on board between two and three million dollars. One man had $750,000 as the result of two years work, and not one of the one hundred and fifty passengers returned empty handed.

In a document dated from Tarlac, July 27, Aguinaldo has appealed to the Powers for the recognition of Filipino independence. The document has been received by the foreign consuls at Manila, with the request that they forward to their respective governments.

The Pope praises the Peace Conference. He believes the foundation has been laid for a great edifice of international

Digitized by Google

peace. He is preparing an encyclical in which he urges the governments to further this work, and pledges anew all the forces of the Catholic Church.

A. P. Davis, chief hydrographer of the United States, has started for Bluefields, where he will begin the work of investigating the Nicaragua route. Five distinct routes are under consideration, and Mr. Davis will probably examine the other proposed routes also.

Arms and ammunition destined for Dominican insurgents were seized by Haytian officials at Fort Liberte. President Sam of Hayti, has wired the Dominican government that insurgents will not be permitted to use Haytian territory as a base for operations.

A. G. Peck of Cohoes Falls, N. Y., has purchased the Muckross estates in Ireland, on which are the famous lakes of Killarney about which there has been so much talk of late. The purchase price was about one hundred and eighty-five thousand dollars.

The last company of militia left Cleveland August 8, the authorities having decided there was little probability of any further disturbance even if the strike is not settled. The Big Consolidated continues to operate its lines with non-union men.

General Miles celebrated his sixtieth birthday anniversary. He was in excellent health and spirits, and said he felt as young and strong as he did at forty, and that he was ready for any duty he might have to perform anywhere.

The American delegates to the Peace Conference have offered, on behalf of the United States, to erect near the English Church, a Peace Chapel, in commemoration of the Conference. The offer has been gratefully accepted.

Miss Clara Barton returned from Cuba August 1. She says the chief work to be done by the Red Cross at present is the caring for the orphans of reconcentrados. There are about five thousand orphans in Havana.

Information is received at Washington that China has refused to permit the shipment to Manila of horses purchased in her empire by an agent of General Otis, on the ground that they are contraband of war.

General McArthur's force, consisting of four thousand men, met and defeated a Filipino force of six thousand near San Fernando, August 9. The American loss in killed and wounded was twenty.

The leading banks in the West report that money is more plentiful than it has been for many years. It is believed that the West will not have to send East this year for money to move the crops.

Liliuokalani, former Queen of the Hawaiian Islands, who is now residing at Washington, D. C., says that notwithstanding the reports to the contrary, the islands are in a state of anarchy.

Information is received from Madrid that Aguinaldo will not deliver the Spanish prisoners, held by the Filipinos, without the intervention of the Pope, who objects to interfering in the matter.

Governor Roosevelt recently delivered an address to the ministers of the Summer School of Theology at Ocean Grove, N. Y. His topic was "Practical Politics and Decent Politics."

The United States and German members of the Samoan Commission arrived at San Francisco, August 6. The commissioner for Great Britain went to London by way of Australia.

Information is received from Madrid that Aguinaldo refuses to carry on any negotiations respecting the Spanish prisoners unless Spain recognizes the independence of the Philippines.

It is reported that there is so much counterfeiting going on in Cuba, Porto Rico, Hawaii, and the Philippines that the secret service will have to be extended to those islands.

The Secretary of the Treasury has given orders for the printing of gold certificates with a view to resuming their issue, if needed, in the movement of fall crops.

The customs receipts from Cuba for the first six months of the present year were $7,084,168. Havana leads the list with $5,146,830 for the period named.

Rear Admiral Watson will be instructed to dispatch the vessels of the Asiatic squadron in rotation to Yokohama, Japan, for a month's stay.

The New York cloakmakers have returned to work, having been granted their demand for an increase of twenty-five per cent in wages.

The ground for the United States exhibit at the Paris Exposition in 1900 was formally transferred to the commission August 10.

Owing to the capture of Manila, the trade of the United States with Hong Kong has increased at a rapid rate during the past year.

The court-martial trial of General Toral and the other officers concerned in the surrender of Santiago resulted in their acquittal.

President McKinley's secretary, Mr. John Addison Porter, witnessed the prorogation of Parliament, August 9.

It is stated that the Filipinos demand seven million dollars for the release of the Spanish prisoners held by them.

The English government has determined to introduce the gold standard in India, and is hopeful of good results.

The French ambassador, M. Cambon, has sailed for Europe where he expects to make a four months visit.

The Christian Endeavor has requested space for a building of its own at the Paris Exposition next year.

Mr. Andrew Carnegie has donated £10,000 to found a public library at Keighley, Yorkshire.

The National Catholic Total Abstinence Convention was held in Chicago, beginning August 9.

President and Mrs. McKinley will probably remain at Plattsburg, N. Y., until September 1.

The national encampment of the G. A. R. will be held in Philadelphia, beginning September 4.

SEPTIMUS J. HANNA, C.S.D., Editor. CAMILLA HANNA, C.S.D., Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

As to Class Teaching.

PERHAPS there never was a time in the history of our movement when the matter of class teaching should be more sacredly considered or carefully guarded than at present. The teacher arranging for a class should carefully investigate the character and purpose of every applicant, so as to guard against the possibility of fraud and imposition on the part of the applicant.

More than ever before spies will be hired by the enemies of the cause to get into classes for the express purpose of writing them up in the newspapers by way of sensational matter. This has already been done and may be attempted again.

While it is true that the effusions of hirelings—showing as they do their perfidy and dishonesty in every line they write—will have little weight with a discriminating public, nevertheless, such things add so much more to the general sum of attacks upon Christian Science. Christian Science has nothing to fear from anything that may be published honestly and in a fair spirit in relation to its teaching, whether in class or out of it, but the distortions and attempts at ridicule of unscrupulous hirelings are another matter.

The teacher in these times who does not carefully discriminate, and enter most cautiously and conscientiously upon his teaching work, is injuring both himself and the cause.

This is said, not by way of criticism of what has been done, but by way of caution for the future and in the interest of the cause.

Problems of Orthodox Churches.

PERIODICALS of the leading Protestant denominations and the public press have recently published many articles and editorials in regard to the growing number of empty pulpits, the unsatisfactory standard of average ability among preachers, the insufficiency of the right kind of men now preparing for the ministry, the apathy of the members of large city churches, etc.

Some of the problems now pressing for solution seem to be organic—that is, they signify the existence of inherent errors of organization. The problem of assigning the right men to the right pulpits is simply impossible of solution, even if it be assumed that the clerical ranks contain enough suitable men for the places to be filled,—an assumption which does not seem warranted, judging from the frequent complaints about the inferior grade of men turned out by the divinity schools. Church organizations which embody the system of personal preaching by professional clergymen, will always have a good many churches without pastors, and pastors wanting churches.

The denominational authorities quite generally agree that the growth of scepticism concerning the truth of the Bible, bred of so-called higher criticism, and the widespread practice among ministers of preaching on political and social topics instead of adhering to the sincere and fervent expounding of the simple Gospel truths, are the principal causes of the present unsatisfactory conditions. A return to the plain, earnest preaching of the Gospel is advised; but then another difficulty is seen, namely, the lack of agreement as to what is sound doctrine. Higher criticism has tinctured the thought of the professors of the divinity schools so thoroughly and their influence upon the minds of the younger men in the pulpit is so potent that unity of doctrine seems to be a thing of the past among the clergymen of all the leading denominations. They cannot agree as to what is inspired truth and what is error of translation in the Scriptures.

To show how serious the problems are which now cause anxious thought among the great Protestant denominations, the following extracts from articles are quoted:—

"The list of pastorless Baptist churches in Eastern Massachusetts," says *The Watchman*, a Baptist organ, "includes in Boston the Clarendon Street Baptist Church, the Dudley Street Baptist Church, the First Baptist Church, Commonwealth Avenue, the Warren Avenue Baptist Church, the Brighton Avenue Baptist Church, Allston, the Trinity Baptist Church, East Boston.

"Besides these mentioned there are within the suburban limits of Boston at the present time the following important pulpits unfilled by regular pastors for a longer or shorter time: The Brookline Baptist Church, the First Baptist Church, Cambridge, the North Avenue Baptist Church, Cambridge, the Immanuel Baptist Church, Newton, the First Baptist Church, Newton Center, the Carey Avenue Baptist Church, Chelsea, the First Baptist Church, Melrose, the Winchester Baptist Church, Winchester, the First Baptist Church, Beverly, the West Medford Baptist Church, West Medford, the First Baptist Church, Woburn, the Central Baptist Church, Middleboro, and the First Baptist Church, Brockton."

Commenting editorially on the situation, *The Watchman* says:—

"Several correspondents write us in substance that one reason for short pastorates and the unrest of ministers and people in the pastoral relation is to be found in the increasing secularization of sermons. In the attempt to be up to the times and interesting, it is said that ministers take their subjects from current political and social discussions, and the people feel that the preacher is not an expert in these matters, that he does not speak with authority. If they dissent from him they do not care to go to hear him, while, if they agree with him, they soon tire of his discussions.

"There is some reason for this criticism; but as a matter of fact, we doubt if many ministers of the gospel choose these topics by deliberate preference. They see that preaching out of the Scriptures does not hold crowded congregations, and the demand is that churches be filled. Hence, against their sober judgment, they adopt the line of pulpit discourse that will draw a congregation immediately. When this device gives out they hope to find something else.

"To meet this tendency two things are needed: Will-

Digitized by Google

ingness on the part of the churches to sustain their pastors in Scriptural preaching, and a larger and stronger spiritual and moral grasp of Biblical truths on the part of ministers."

The *Literary Digest* for July, under the caption: "Is Presbyterianism Declining in New York?" has this to say:—

"The statement has been made more than once of late that the Presbyterian Church is not maintaining its hold in the metropolis. In particular the New York *Sun*, which is always interested in questions of religious and social as well as of political morals, has recently printed a number of articles and letters in proof of this assertion. *The Sun* points to the fact that at the present moment there are ten Presbyterian churches in the borough of Manhattan which are without pastors or are in a distracted or declining condition. Others which were once notable and prosperous churches are maintaining themselves only with the greatest difficulty. Dr. Hall's old Fifth Avenue Church, once the richest and most powerful Presbyterian Church in the world, remains without a pastor. The Brick Church is soon to be deprived of Dr. Van Dyke, while a Jewish congregation is to buy Calvary Church in 116th Street.

"These statements were lately disputed in the New York *Observer*, but have apparently been confirmed by the New York presbytery itself, which very recently referred to the facts in dealing with the McGiffert case, hoping by this means to induce Dr. McGiffert to retire voluntarily from the church without further weakening it by the turmoil and animosities of a heresy trial. Thus far, however, Dr. McGiffert has shown no signs of yielding, and has reiterated the statement that his faith is not in conflict with that of the Presbyterian Church. As to the causes of this decline, *The Sun* is disposed to think that Dr. McGiffert and the type of thought he represents are largely to blame."

At the Presbyterian General Assembly held at Minneapolis last May, the problem of Dr. McGiffert's alleged heresy was thoroughly discussed, but the Assembly was seemingly afraid to take vigorous action to remove him, although his teachings were held to be very dangerous, as may be inferred from the following newspaper report of remarks made in the assembly by Dr. Moore:—

"Like a prophet of old, with beetling brow and hoary hair and beard, Dr. Dunlop Moore of the presbytery of Pittsburg lifted up the voice of conservatism. 'I have read this book,' he said. 'It is bad; there are worse, for some books deny the authenticity of every one of the gospels. Dr. McGiffert questions only sixteen out of twenty-seven. The book,' and the old man shook with feeling, 'is an abomination before God. Some one has spoken of the kind tone of Dr. McGiffert's letter, it gives me no encouragement. If I had Dr. McGiffert here I would knock that nonsense out of his head.' This last sentiment was liberally applauded."

Under the headlines "Methodists aroused—Declaration that the churches are losing members," the New York *Mail and Express* of May 29, publishes the following:—

"The Methodist preachers, at their weekly meeting today, at No. 150 Fifth Avenue, applauded every reference that was antagonistic to higher criticism. The specially invited speaker was Mr. W. Phillips Hall, a Wall Street broker and an evangelist. Mr. Hall started out by showing that Methodism, with 11,119 churches in the United States, and a membership of 2,720,541, showed an increase last year of only a trifle over one per cent. The New York and Newark Conferences, he said, showed an actual decrease, and the entire Church of God seemed to be losing ground.

"'The time has come,' declared Mr. Hall, 'when ministers should be aroused to the issues involved, and to the great need of a general revival of pentecostal grace. A spirit of general worldliness seems to have invaded the church, and there is too much timorousness among the members. Those who want to save it must go to work at once. If it is wrong for Christians to dance, play cards, go to theatres, or read Sunday newspapers, let us draw the line strongly and at once. The church needs it and is dying without it.' (Loud applause.)

"'We must either get back to a pentecostal platform, or as a church we shall go down.

"'The great stumbling-block is higher criticism. My knowledge by reading the Bible has taught me it is inspired, but according to higher critics I must dismiss this idea.

"'The first duty of Methodists is to revive class meetings, restore holiness, appeal for the witness of the spirit, and pray earnestly for a pentecostal shower.'

"Loud applause greeted Mr. Hall as he sat down, and the preachers broke out into singing.

"Rev. Dr. Wallace, during the discussion that followed, said that no one could deny that there was a dearth of feeling in the church, and he held that it was time ministers opened their eyes to it instead of trying to explain it away.

"Rev. Dr. T. J. Poulson and Rev. R. M. Aylesworth spoke energetically of the great need of a revival of religion to check the loss in membership in the churches, and the meeting closed with a session of prayer."

Regarding the status of the Methodist Church in the vicinity of Boston, Thomas W. Silloway in a communication to the *Boston Traveler* of May 12, says: "I begin with what the public is informed was stated in a public discourse at Lynn, Mass., April 9, 1899, by Rev. C. E. Davis, pastor of the First M. E. Church, the oldest of the denomination in New England. After a scathing denunciation of his own church for its lack of interest in the cause of missions, he is reported to have stated that he did not know of a country church in Worcester County where he has been that had not been going down hill for twenty years, nor did he know of a country church in Massachusetts that had not retrograded in the last twenty years. He stated that there had been an increase of but seven hundred members in the Methodist churches of the county for the year, when Lynn ought to have furnished that number alone. The following statement is also attributed to him, and I give it for what it is worth: 'Look at it as you will, Methodism is dying of dry rot at the heart.'"

The press reports of the transactions of the Council of the Episcopal diocese of Virginia held at Richmond last May, attribute the following speech to Bishop Whittle:—

"Never within my knowledge have we had so few candidates for Holy Orders, or so few young men preparing for the ministry of our Church. This is a great and alarming fact. It certainly seems to indicate a decrease of spirituality and an increase of worldliness among our church people."

The general dissatisfaction in the Episcopal Church over the reception of Dr. Briggs into its fellowship, after he had been dropped by the Presbyterians because of his heresy, is well known, and some of the Episcopalian organs regard this step as a very serious mistake.

In a sermon at Old Orchard, Me., July 30, Rev. L. B. Bates, D. D., of Boston, is reported by the *Boston Globe* as saying, "The condition to-day is very like what it was five hundred years before Christ. There is coldness in the church, a desire to be amused, an unwillingness to follow the commands of God."

At the Christian Endeavor Convention in Detroit last

Digitized by Google

month, Rev. Dr. A. McLean of Cincinnati, epitomized the situation as follows:—

"Nineteen centuries have passed since Christ was born, and only one third of the race is even nominally Christian. Nine per cent of all the people on the globe are Protestant, fifteen per cent are Catholic, and seven per cent are Greek. At the present hour there are more than one thousand million souls without the gospel. Not only so, but the non-Christian part of the population is increasing at an appalling rate. There are two hundred and fifty million more in this class than there were a century ago.

In the face of the seeming unfavorable attitude of the world toward the churches, the Christian Science Church has had a steady and rapid increase in membership from year to year, and church building has been progressing astonishingly. The Mother Church in Boston has now a membership of over fourteen thousand, having added nearly twenty-five hundred members to its rolls at the Communion service last June. The branch churches are also growing in about the same proportion.

What makes the growth of the Christian Science denomination stand out in such marked contrast to that of older churches is that it has no professional clergy and no personal preaching, the sermons each Sunday being drawn literally from the Bible and "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, thus avoiding the possibility of heretical interpretation. Without a single exception, all Christian Science churches the world over, unqualifiedly accept Science and Health as their commentary of the Scriptures, hence there are no disputes within the church on questions of doctrine, the only disputants claiming the name Christian Scientist being those who have gone out of the church.

The wisdom of the policy of the Christian Science Church, is amply proven by the intelligent unanimity of thought of its members, on all points of doctrine, their deep interest in the sermons, the increasingly large attendance, and the earnest effort of Christian Scientists to observe the precepts of the Master.

A system of religion, if established by God, ought to meet every human need. Christian Science fills the requirements of a divinely established religion.

The sum total of all human knowledge cannot explain what causes a grain of mustard seed to germinate; then why cling so tenaciously to the "enticing words of man's wisdom." Let us acknowledge our ignorance and be willing to seek Truth with the unbiased judgment of the little child.

If theology be a science, the professor of theology ought to be happy and healthy, or at least should be making perceptible progress toward these perfect conditions; but many of them break down in health while teaching that God is able to do all things but that the age of Christian healing is past never to return.

The belief that goodness is foreign to the nature of man leads to the attempt to enforce goodness by laws and customs—to fasten goodness on man like a pair of handcuffs.

Innate badness calls for repression and restraint. Innate goodness needs only freedom to unfold. The doctrine of natural depravity is not in harmony with the facts as brought out in numberless cases of moral regeneration through Christian Science which takes the ground that man is the image of God and cannot have fallen. Under this treatment the innate goodness quickly manifests itself.

A good old Presbyterian lady having once been asked if she thought the doctrine of total depravity was right, innocently replied, "Yes, I think it is if it is lived up to."

Christian Science acts upon the latent good in men like sunshine upon a grain of wheat, which all winter long has been buried under earth and snow.

In teaching that man is good and pure by nature, Christian Science does not condone immorality, but takes the most effectual method of destroying it, by disclosing the true character of man and encouraging him to unfold it.

Christian Science and the Law.

WE have read with considerable interest an account of the proceedings recently taken at a meeting of the Medico-Legal Association of New York City, held on the evening of June 21, at which was discussed the advisability of prohibiting the practice of so-called Christian Science healers.

It is needless to allude to the deep interest that the present subject must necessarily excite, roused as it has been by numerous cases alleged, and in some cases actually proven, to have occurred in which death has ensued due to a lack of proper medical attendance, the patient or his friends having been believers in Christian Science healing. But before we come to take up any such stringent remedy as legislative action, let us pause and consider.

In the first place, viewing Christian Science merely as a religion, there can, we believe, be scarcely any doubt of an absolute lack of authority resident in any law-making body in this country to declare unlawful the observance of the precepts of a particular cult where such precepts do not bring about results positively injurious to the community at large. A power to prohibit polygamy or polyandry no one may dispute nor, as one of the speakers stated, may the Salvation Army be permitted to disturb the quiet of the neighborhood with sound of cymbals or tambourine. It is a very far step from this, however, when we say to a man, "You must employ a member of such and such a medical school when you or one of your family is ill." To our mind, an act like this comes quite close to being an exceedingly dangerous infringement upon the liberty of the individual. It is an intensely wearisome platitude to say that the very best way to favor a religion is to persecute it, and it is very questionable whether anything would give quite the impetus to Christian Science that a few penalizing statutes would. Remember that this is not merely a question of a preference for some particular school of medicine. The followers of Mrs. Eddy have bound up their system of medicine with their religion; if one fails, the other must fail also.

The author was talking some time ago with the somewhat cynical proprietor of a well-known patent medicine whose advertisements we see upon every fence, and during the course of the conversation asked him: "Now, just as a matter of fact, between ourselves, is there really anything in the claim that that mixture of yours will cure all the list of diseases that you say it will?" The answer received was, "Well, it won't do people any positive harm, and a man will believe anything you tell him about his religion and his health, so maybe it really does somebody a little good." It is because the Christian Scientists have combined the two that there will be an infinity of trouble in enforcing any prohibitive act, and the moment one is

Digitized by Google

passed it is easy to prophesy that a cry of religious persecution will be raised that will operate to bring a goodly number of recruits into the fold.

But, putting aside all questions of the religious aspect of the matter, let us look at the subject purely from a medical standpoint. While disclaiming any affiliation with the sect, we think it questionable whether some good is not obtained through their methods in a certain limited class of cases. Every physician realizes the important role played by imagination when he remembers the vast number of cases which exist of hysterical origin. In cases of hysterical paralysis, hysterical aphonia, hysterical motor ataxia, and hysterical dermographism, where the true seat of the disease is in the imagination alone, the Christian Scientist may almost contend on an equal plane with the graduate of a medical school. The cure is as easy and efficacious, whether the patient takes bread pills or submits to a pretended operation for the purpose of humoring him and persuading him that a cure has been effected, or is made to believe that a beneficent deity has interposed for his especial benefit. No one who has visited the cathedrals in Catholic cities can fail to be impressed with the heaps of crutches and canes that are shown as testimonials of the medicinal properties of the thigh bone or ear tip of some particular saint. That a person has entered the shrine of our Lady at Lourdes on crutches after having been treated for a long time without success by the medical fraternity, has thrown the crutches away and walked forth cured, to all appearances, may be conceded. That there was anything really the matter with such an individual beyond a perverted imagination may be denied. If the hypnotist is able to cause a blister to arise by informing the subject that he is touching him with a red hot iron when, as a matter of fact, he touches him with nothing more harmful than the tip of his finger, we are certainly justified in allowing wide latitude to the powers of the imagination.

"But," some one may ask, "how about contagious and infectious diseases when nothing is done to prevent their spread?" To that it may be answered, that while the citizen may have the right to call upon a Christian Scientist if he so desires, to attend himself or his family, that being a purely personal matter, he had no right to endanger the lives of his neighbors. By all means, let the holder of a degree of C.S.D. practise in all cases, if any one can prostitute his reasoning powers so that he believes in an ability to cure by Christian Science methods such diseases as small-pox, diphtheria, or typhoid, but let such healer act under the same supervision as does the holder of an M.D., who is required to notify the Board of Health of the existence of the malady, and compelled to see to it that proper means are adopted by isolation, etc., to prevent the spread of the disease.

But let us be just and consider that in all probability no science is so inexact as that of medicine. Mind, we are not speaking of surgery, but medicine, pure and simple. Call in half a dozen physicians and you will usually, if the case presents any complicated features at all, have at least four of them differ in the diagnosis. There is scarcely any profession which hates more to depart from given lines. Hypnotism, after over fifty years of struggle, is just beginning to be recognized as a possible aid in effecting cures of a mind diseased. What an uphill fight did Dr. Morton have in introducing chloroform as an anæsthetic. How long was it before the virtue of vaccination began to be recognized, and how long was it before the pioneers who urged that heated rooms and loads of blankets was no way in which to treat a fever patient ceased to be looked upon as dangerous lunatics? Who cannot remember the memorable struggle between the "regular" and the homœopaths, and the battle which is even now being waged between the allied forces and the osteopathic school? While the professors of Christian Science may go much too far in their claims, some credit must be given them, and just what amount of credence should be placed in their methods must be determined by the individual patient, or, should he not be capable of acting for himself, by those to whom the law has confided the duty of protecting him. On the whole, the case seems one where each individual may be permitted to act as he or she thinks best about calling in a Christian Science healer, and any legislation which would tend to restrict this would be far too paternalistic to deserve anything but failure.—*The American Lawyer.*

Another Christian Science Department.

In opening a Christian Science Department as a regular feature of the paper, the *Woman's Weekly* of Omaha, Neb., says editorially:—

The new department on another page, edited by Mrs. Hamblin, is believed to be one of interest to a large number of people in the state and city. The *Weekly* has not investigated the doctrines of the Christian Scientists, but it knows several people who profess to believe those doctrines, and they are respectable people, who say they are trying to lead pure lives, and the evidence sustains the statement. The practice of the Christian Scientists is not to refute any sort of slander, as they believe that the truth will finally prevail. For that reason they suffer greatly on account of newspaper criticisms, in the minds of many people who are observers. There is no paper hereabouts that has taken up the fight in their defense, and when the proposition came to the *Weekly* to do that, it was met as every such proposition has always been met during its six years of life with the assurance on the part of the editor, that space would be gladly furnished for them to set forth anything which seems to be for the good of humanity.

The paper has no apologies to make for this course. It believes that if the Christian Scientists are right in all their notions, that every one should get on their side as soon as possible. It believes if they are wrong, the more publicity given to their doctrines, the sooner they will perish from the minds of men.

Another reason why it is proper to give space in a newspaper to this subject of Christian Science is that a great many people are curious to know the subject as it is from the Scientists' standpoint. The subject is one upon which all sorts of rumors are afloat, and the truth is what the people always enjoy at the last. If any of our readers take issue with the editor of the department at any time, space will be given for a fair discussion of the point, and we shall earnestly assist both sides to arrive at the truth, so far as it may be reached in this world, with its hard limitations.

The editor of the *Weekly* has talked of this matter to scores of people during the past six weeks. Many have said, "I should like to know exactly what these people are aiming at, and wherein they differ from other churches." This has been a strong argument in favor of giving the space to the people, who ought to know their own opinions, ideas, and beliefs. They ought to be able to set them before any honest investigator more clearly than any outsider could do, and we believe Mrs. Hamblin, who will for the present edit the department, to be an intelligent, earnest, honest woman. She will no doubt present many helpful suggestions from time to time, and if through her work in the *Weekly*, one person is benefited, we shall be glad, and there is a certainty that none will be injured.

Moral Fault and Disease.

[From "Literature and Dogma."]

MEDICAL Science has never gauged,—never, perhaps, enough set itself to gauge,—the intimate connection between moral fault and disease. To what extent, or in how many cases what is called *illness* is due to moral springs having been used amiss, whether by being over-used or by not *being* used sufficiently, we hardly at all know, and we too little inquire. Certainly it is due to this very much more than we commonly think, and the more it is due to this, the more do moral therapeutics rise in possibility and importance. The bringer of light and happiness, the calmer and pacifier, or invigorator and stimulator, is one of the chiefest of doctors. Such a *doctor* was Jesus; such an operator, by an efficacious and real, though little observed and little employed, agency, upon what we, in the language of popular superstition, call the *unclean spirits*, but which are to be designated more literally and more correctly as the *uncleared, unpurified* spirits, which came raging and maddening before him. This his own language shows, if we know how to read it, "What does it matter whether I say, Thy sins are forgiven thee; or whether I say, Arise and walk." And again, "Thou art made whole, sin no more, lest a worse thing befall thee." His reporters, we must remember, are men who saw thaumaturgy (wonder working) in all that Jesus did, and who saw in all sickness and disaster visitations from God, and they bend his language accordingly. But indications enough remain to show the line of the Master, his perception of the large part of moral cause in many kinds of disease, and his method of addressing to this part his cure.

It would never have done indeed, to have men pronouncing right and left that this and that was a judgment, and how, and for what, and on whom. And so when the disciples, seeing an afflicted person, asked whether this man had done sin or his parents, Jesus checked them and said: "Neither the one nor the other, but that the works of God might be made manifest in him." Not the less clear is his own belief in the moral root of much physical disease, and in moral therapeutics; and it is important to note well the instances of miracles where this belief comes in. For the action of Jesus in these instances, however it may be amplified in the reports, was real; but it is not, therefore, as popular religion fancies, thaumaturgy,—it is not what people are fond of calling the supernatural, but what is better called the non-natural. It is, on the contrary, like the grace of Raphael or the grand style of Phidias, eminently natural; but it is above common, low-pitched nature; it is a line of nature not yet mastered or followed out.

MATTHEW ARNOLD.

From the Religious Press.

Dismiss Without Censure.

The *Advance* counsels the Congregational churches to dismiss without censure all Christian Scientists who wish to join Christian Science churches, but without the letters of recommendation to these churches, on ground that they are not evangelical in doctrine.

The Watchman (Baptist).

Definition of evangelical—Holding or conformed to what the majority of Protestants regard as the fundamental doctrines of the gospel, such as the Trinity, the fallen condition of man, Christ's atonement for sin, salvation by faith, not by works, and regeneration by the Holy Spirit; spiritually-minded; as, an evangelical church or denomination. *In a special sense, spiritually-minded and zealous for practical Christian living. Seeking the conversion of sinners.*—STANDARD DICTIONARY.

If to be evangelical involves the acceptance of all the doctrines given in the above definition, then Christian Science cannot be properly called evangelical, for our textbook, Science and Health, page 473, says, "Thus Jesus taught that the Kingdom of God is universal, and man unfallen, pure, and holy." Christian Science is, however, evangelical in the sense of standing for *practical Christian living*, for the *conversion of sinners*, for *spiritual mindedness* and close adherence and loving loyalty to the teachings of Jesus. It stands for more, namely, the reproduction of the Gospel works as a proof of possessing the Gospel spirit.—ED.

Reward of Unselfishness.

True power comes to the individual, not when he seeks its source in himself, but when he is willing to attach his own destiny to what is universal. It is not our personal good that abides, but the good that belongs to all men. Real spiritual strength is secured when we identify ourselves with mankind, and seek only that which comes to all.

It is the self-seeking that brings fret, worry, heart-ache, discontent, and disappointment. When we identify ourselves with the common good, find in that hope and satisfaction, we are sustained by it; and it makes our aims large and noble. We cannot claim of God the protection of any special providence. Rather should we wish for that which is universal, that guards every member of the race by unfailing law. If all are provided for, we shall not be left in poverty.

It is our strength, and not our weakness, that we share in the "common lot." In so far as we recognize this common destiny, and accept it cheerfully, even gladly, are we made ready for the real work of life. Especially are we qualified for our tasks if we are brought to see that the divine ordering is not arbitrary and wilful, but broad, generous, unfailing, and universal. Whatever the divine order, within that is our place, in harmony with it is our strength secured, by way of that comes all our power.

. . . . . .

He who seeks to bring his life into harmony with the divine order is not a mere puppet in the hands of God. Rather does true loyalty to God bring to the individual the full measure of his own capacity for spiritual activity. We gain the largest liberty by the most perfect obedience. Our own success is most assured when we forget self in the interests that are God's, and not ours.

When we are grieved and disappointed, is it because we have been seeking individual success? If that is the case, the remedy is to cast on God the burden and the issue. We have tried to accomplish too great a task, to bear too heavy a burden, and we have not been equal to what we have undertaken. It is but a small responsibility that is ours, and that must be shared with others; and in the sharing is the strength. In obedience to the divine will is our hope and promise.—*Christian Register* (Unitarian).

Universalist on Christian Science.

In the last number of the *Leader*, a writer, quoting from a paper prepared by the Rev. Mary Baker G. Eddy, and read before the Parliament of Religions at the World's Columbian Exposition of 1893, gives what he concludes to be the doctrines of the Christian Science churches. And any other person would doubtless arrive at the same conclusion if they confined their attention or criticism to that particular statement of Christian Science theology as presented by Rev. Mrs. Eddy at that time. For this reason the writer, who seldom errs with his pen in matters of this kind, is in this instance, we think, led into a mistake

Digitized by Google

on a point of great interest to all Universalists, and also fails to do justice to believers in Christian Science on the question of human destiny.

It is a remarkable fact that Rev. Mrs. Eddy's book, entitled Science and Health, occupies precisely the same ground on the subject of sin, its origin and end, as that advocated so tenaciously by Father Ballou of hallowed memory. We also find in the same work a statement on page 493, of the belief of Christian Scientists. Article 3 reads as follows: "We acknowledge God's forgiveness of sin, in the destruction of sin, *and that sin and suffering are not eternal.*" (The italics are ours.) What plainer or stronger statement can we have than this, to express the Universalist idea of human destiny? We have before us the creed of a Christian Science church of a neighboring city, that adopts this view of the future life, and it is probably an article in the creed of every church of that name in the country. Our good friend is therefore entirely mistaken when he asks, "What does a Universalist gain who gives up a Profession of Belief that finally all souls will be brought into harmony with the will of God by substituting therefor a declaration of 'tenets' which wholly ignores the question of immortal destiny?" It is unfortunate that Rev. Mrs. Eddy did not define the Universalism of her creed and church as clearly at the World's Parliament of Religions as she had in her Science and Health. Why she did not do this, needs, we think, some explanation.

We have no particular desire to champion the cause of Christian Science, or at least till we have more light on the subject than seems probable at present. We only ask that justice be done to all sides and to all sects, especially where there is so near an agreement in the one great essential and beautiful truth of a world's deliverance from sin, as exists between ourselves as a church and our Christian Science friends. We are ready to rejoice, as was St. Paul, in whatever way this blessed gospel is preached. V. L.

In the *Universalist Leader.*

Unitarian Need of Theology.

President Hyde says that Unitarians have been brought "to the very verge of doctrinal sterility" by their contempt of dogma, and have found it impossible, "to breed their ministry out of their own loins." Whereon that excellent Unitarian journal, the *Christian Register,* says, "There is some truth in the statement. Theology is the orderly array of our knowledge of God. What we know about God, or what we think we know about God, can be stated. The relations of our thought of God to other forms of thought can be pointed out. To deny that we have any theology is to deny that we have any thought of God that is worth setting in order."—*The Watchman* (Baptist).

England and Catholicism.

It is cold comfort which Mr. Richard Bagot, an English Roman Catholic, gives his fellow-believers. He says that Roman Catholicism is losing ground in that country and that it never will be converted to the papacy. He gives four reasons: repugnance to the confessional, hostility to the arbitrary rule of the pope, Ireland's wretchedness—largely due to its dominant form of religion, and innate and vigorous Protestantism in the English blood. Evidently he knows his countrymen thoroughly. The indications now are that the Established Church will manage to go on somehow without any such division as seemed probable a few months ago. But, should one occur, it is doubtful if the High Churchmen, as a body, would go over to Rome, although many individuals among them probably would become perverts. And if it were to go, much the larger portion of the Anglican Church still would be left behind. The outlook for the supremacy of the Roman Catholic Church is no better here than in England, in spite of the outcries of some alarmists, and none understand the fact better than many of the most influential prelates. The simple fact is that Roman Catholicism and the Anglo-Saxon race are naturally uncongenial. It is much easier for an Italian, a Frenchman, or a Spaniard to be a Roman Catholic than for an Englishman or an American. And the different training of the different races intensifies the tendencies of their natures.—*The Congregationalist.*

The Lectures.

At Eastport, Me.

Rev. William P. McKenzie, C.S.B., of Cambridge, Mass., member of the International Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., says the *Eastport Sentinel* of August 2, delivered, as advertised last week, a fine lecture at the Opera House on Monday evening to a comfortably filled house. The speaker was introduced by a former townsman, Mr. Carol Norton, C.S.D., also a member of the same Board of Lectureship. Professor McKenzie held the attention of the audience while he unfolded in a lucid manner the religion, philosophy, and Christian healing of Christian Science. The stage was prettily decorated with evergreens, palms, and cut flowers. Mr. Norton's introductory remarks were as follows:—

Ladies and Gentlemen, Fellow-citizens:—We have assembled to-night to hear a lecture entitled, "The Truth Concerning Christian Science." I think we are all aware of the fact that this subject is at the present time engaging the sober thought of Christendom. This lecture is given in the regular course of the educational work of this great movement. The lectures are designed to put this subject before the people in a simple and direct way. Life at best is deep. Life on the one hand is filled with mystery, and on the other with certain self-evident truths. The great question of Pilate, after all, peculiar as we have always thought it, but still uppermost in every breast, is What is Truth? We are thinking beings. We live in a world of thought, and advancement must be progressive. Again, we look about us in the world of existence and with one voice we admit that if sin were removed, if we could conceive of an understanding of God and of religion that would eliminate pain, wasting disease, and misery, and if through a spiritual mastery of the teachings of the Founder of the Christian religion we could gain a practical and every-day understanding of the significance of the kingdom of Heaven within, then I say that we would be willing to hear the Truth, to get new light on old truths, and to embrace as a unit the one great motive-power of this religion—the return to the demonstrable Truth of Christianity, not according to the schools, not in harmony with scholasticism, but Christianity according to Christ, with its power of moral regeneration, spiritual or mental transformation, the healing of physical disease, and step by step the establishment on this earth of the kingdom of righteousness and of God.

We have with us to-night one of the regular lecturers of the Christian Science body. Lectures are being carried on in all the cities and in the majority of the towns of America, the Dominion of Canada, and in England, and it is with great pleasure that I introduce to you the lecturer of the evening, Rev. William P. McKenzie, C.S.B., of Cambridge, Mass.

The audience was composed of representative thinking people from all the congregations of the city, and gave Mr. McKenzie's delightfully clear and interesting lecture marked attention. In this, the most easterly city of the

Digitized by Google

United States, we feel especially pleased to have had the privilege of this able and convincing presentation of the great truths of Christian Science, and as this is the first American city to see the rise of earth's sun, so we rejoice in the fact that the sun of righteousness has risen with healing in its wings through this gospel of Christian Science healing and regeneration. Thus in this land of sunrise the work is going on and the signs are following.

THE SECRETARY.

At Fortuna, Cal.

Dr. A. A. Sulcer lectured at Fortuna, Cal., Thursday, July 20, to an audience composed of representative citizens, his subject being "The Science of Christian Science."

The lecturer was introduced by a practising doctor of medicine, W. D. F. Ward, M. D., who accepted the office as a mark of respect to one who had been a colleague. Dr. Ward's introductory address was as follows:—

Ladies and Gentlemen:—This seems a paradoxical position for me to occupy, but you see I am "clothed," and I assure you, "in my right mind."

It is seldom you see business men sending trade to the other store, and this may seem what I am doing; but, ladies and gentlemen, I have three reasons why I am here,

First, some of the best citizens of our town—who are among my best friends, but who are not patrons—have invited me to introduce the lecturer on this occasion. Second, Though I do not pose as a very pious man, yet there are times when I do wish to express and show to the community one feature of the principles of the Divine Master—liberality. Third, the learned lecturer belongs to the noble profession of which I am a humble member. When I reflect upon the amount of labor required to have the title M. D. honorably attached to our name, the amount of study to keep abreast of the times, and further think of the anguish we sometimes feel when face to face with the problem of disease and suffering, how our hearts are saddened as we return to our homes when our wives dare not question us or our little children play with us on account of our business countenance—after these and many other sufferings we are often reviled by those people over whose happiness we have been so solicitous—I say for these and other reasons I am here to introduce the learned lecturer, though he may now have an apparently easier method in the healing art.

Ladies and gentlemen, allow me to introduce A. A. Sulcer, M. D., who will address you on "The Science of Christian Science."

T. W. WILSON.

Lectures at Other Places.

Fenton, Mich.—W. G. Ewing, Friday, June 9.
Lake Geneva, Wis.—W. G. Ewing, Monday, July 17.

A Physician to Physicians.

BY ALFRED E. BAKER, M.D., C.S.B.

SUPPOSE you had discovered a drug, the active principle of which should prove to the entire satisfaction of yourself and more than a million patients. Suppose this remedy needs no compounding, for it is always prepared. There is no patent, no red tape, no middleman, no quackery connected with it—a noble remedy indeed, making the lives of doctors and patients better and holier. Let us further suppose that the effect of this medicine is always the same—a salt that loses not its savor. There is no fear, doubt, or uncertainty that it will not act, and act at once. A medicine you could leave with a patient and go away, knowing that when you return you will find that this all-powerful remedy has worked wonders and performed what seems to be a miracle. It is a medicine without schools or rivalry; a medicine no unscrupulous discoverer can monopolize just when the human need cries out for help; a medicine that no combine can cover, as quinine was covered during the war, when seemingly most needed, because there was no other drug known that would produce the desired result. A remedy within the reach of all, and no relentless combine can cry, Up with the prices—*nux vomica, anti-toxin*, not *vox populi*, is king!

An ideal remedy, you say. Then Christian Science is ideal, for a million people are ready to testify that it is just such a remedy. The medicine of Christian Science is Mind, God. God is the only Presence and Power, and all God's children can understand Him. It is only ignorance, superstition, or prejudice that argue they cannot.

This new-old medicine of Mind is the long-desired elixir of life. This is the Love that "casteth out fear;" that "is the fulfilling of the law" of harmony, health, happiness, and holiness; that "worketh no ill to his neighbor;" the one "altogether lovely;" the One Healer. We must all, sooner or later, recognize a power above the human that "healeth all our diseases."

Does any physician know of a drug that will heal sin and sorrow? Yet Jesus the Christ knew of such a remedy, and Christian Science is proving that all men can do as Jesus bade them—preach the Gospel, heal the sick, and cast out devils. Jesus Christ was an authority *against* disease, not on it or for it, as the fashionable fad of specialism is to-day. Who is so apt to die of that disease of which he makes a specialty as the specialist himself? And who can so frighten a patient as a specialist, by confirming a disease as surely fatal?

In the practice of *materia medica*, medicine seems to be working, not with man and against disease, but against man and with disease. While *materia medica* has endeavored to keep pace with disease, it is found that disease has likewise kept pace with *materia medica*. Material remedies, then, are an enemy to doctor and patient alike.

Have you never had a patient whom you sent to the mountains, the seashore, or somewhere else, to get his mind away from himself? What was the metaphysics of this? Was it not to change the mortal mind thought? to drive away the fear of disease? And how many times has the remedy worn out and the prescription utterly failed, because, forsooth, human theories always fail. Thus the fear returns, and with it the disease. Herein is seen the teaching of Christian Science that disease is fear and fear is disease.

The Christian Scientist knows that fear must be cast out in any case, be it a pin scratch or a broken back. His remedy is the understanding that God, the Principle of man, never changes, but is the same "yesterday, to-day, and forever"—eternal Life, Truth, and Love. Mortal mind is ever changing—one belief constantly taking the place of another, theories of to-day becoming fallacies of to-morrow. Truth never changes, but governs man in perfect and eternal harmony.

Are you satisfied that material medicine is all you can do for your patient? Is medicine a science? As honest men and physicians, with only one motive, and that to do good to your fellow-men and help them, can you afford to ignore the claims of Christian Science? Why not strive to understand the nature of this cure as practised by the earnest and honest followers of the Master metaphysician?

The teaching and practice of Christian Science is clearly set forth in "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. Christian Science is your friend, not your enemy, competitor, or rival—for it is the friend of all men, doctor and patient alike. Its practice will not rob you in any way, but will rob death of its sting and the grave of its victory. This blessed remedy

Digitized by Google

will, as you come to understand it and depend upon it, be found to be efficacious to heal mentally, morally, and physically. Even those who are absent, as well as those who are present, can be healed by it.

Should prejudice prevent any one from at least looking into the "little book"? Should we not endeavor to be physicians after the manner of the Great Physician, who relied upon an unseen Intelligence, the invisible God, the indivisible Mind? Again let me ask you to procure a copy of Science and Health, study it faithfully, and put its teachings into practice. Thus you can know for yourself whether Christian Science is more successful than *materia medica*. I have found it so.

Under Fire at Detroit.

As a free discussion of Christian Science is invited in this morning's editorial it is surely the privilege of any respectable citizen to participate in the same.

The right of a religious denomination to worship according to conscience is conceded by the *Free Press*, and would be their prerogative even if every newspaper in the land denied it, but there is a singular and very apparent inconsistency in the statement that they may believe whatever they please, but must not practise their doctrines.

It is very evident that if Jesus of Nazareth had not demonstrated his theories he would never have been crucified. People have always been willing to tolerate mere talk, but when his healing work began to command the attention of all he was soon brought to trial and death.

Now the main objection urged in the article before us is the fact that Christian Scientists receive pay for their services, and this it is claimed is contrary to Christ's teaching and practice. In order to prove the incorrectness of this opinion it is only necessary to read in Matthew's gospel, tenth chapter, seventh to tenth verses, and we find therein a positive command given the disciples to rely entirely upon the return made for their services. When the Great Teacher said, "the workman is worthy of his meat," or as Luke gives it "the laborer is worthy of his hire," he laid down a principle which rightly governs all human affairs. Is it considered wrong to pay ministers for their work, or doctors who only attend the body and leave the moral nature uncared for? There are hundreds of well-authenticated cases of healing in Christian Science where the greatest moral and spiritual uplifting comes with bodily healing, and the late Dr. Lyster, of this city, admitted this fact before the State Medical Association in 1887.

There are thousands of Christian Scientists who are working gratuitously, but it is found that the best work is done by those who devote all their time to study and practice, and who therefore must give up their ordinary occupations. Besides this, Christian Science requires of all the demonstration of justice, and if we have anything good to give we are entitled to due compensation for the same.

The next point taken is the providing for the protection of children, and there were many beside Christian Scientists who thought very seriously upon this question in reading in the Sunday papers the statement that forty-one children under five years of age had died in this city last week under ordinary treatment. The writer does not know of a single case of the death of a child during the last year under Christian Science treatment in this state, but even if a few could be found, could any fair-minded person fail to see that the parents had an undoubted right to seek help in other directions than those where so many failures occur?

It may be thought well, ere long, to have another board of registration, in which statistics of all deaths will be not only carefully kept, but accurately published, giving the names of attending physicians of whatever school, and Christ's test would thus be made available, "by their fruits ye shall know them."

Till then, we abide patiently the events of the hour, having received so many blessings through Christian Science, and fear not to be subjected to persecution for the sake of our cause, inasmuch as we are assured that God does govern the world and God is just. A. M. K.

Detroit Free Press.

Christian Science and Contagious Diseases.

CHRISTIAN SCIENTISTS are misrepresented on the subject of reporting contagion. I have advised families to report such cases. One of the leading Scientists in this city told me she recently refused to treat a family until they reported the case of contagion. Dr. Keough, the health commissioner, is in a position to know, and he very kindly states that with one or two exceptions Scientists have reported contagion.

Dr. Wilcox has well said that "we have had an epidemic of scarlet fever every fall for years, anyway." It is certainly an insidious form of persecution for any physician to seek to place the spread of this error on the neglect of Christian Scientists. The fact is that Christian Science is preventing the spread of contagion more than any other agency. As certainly as Christian Science has healed thousands, just so certain it has prevented other thousands from falling under contagious ailments.

Ignorance of mental therapeutics is no argument against it. This age is turning rapidly from matter to mind for cause and remedy. The growing popularity of Christian Science healing and of non-drugging healers is "the handwriting on the wall." Some of the methods of opposition adopted by the drugging systems would lead us to believe they have interpreted this prophecy, and see the gravity of the situation.

No Christian Scientist or any one else should ever send their children to school or church while under a contagious ailment.

No Christian Scientist or any one else should expose their neighbors to a contagious ailment. To do so is a violation of human government, and is not necessary in any sense to successfully live and practise Christian Science.

It is a fact that many forms of contagion are so mild that physicians allow much freedom, and in some instances have not required a flag put up. If Christian Scientists take the same liberty they are frequently held up as intentional violators of the law.

We are aware that many physicians do not join in this petty persecution, and we are also in a position to know whereof we speak when we say that many physicians have been consistent enough and magnanimous enough to send people to Christian Scientists to be treated. This is the right state of affairs, and it will continue to grow until there is a kindly relation established.

Progress in every age has come about by departing from the old customs and systems. LEWIS B. COATES.

The Salt Lake Herald.

The Lord's Song.

"How shall we sing the Lord's song in a strange land?" (Psalm 137: 4).

We answer: By demonstration—the demonstration of Life, Truth, and Love as taught in Christian Science.

And what is the Lord's song but the song which comes from the pure in heart who see God and reflect "the sinless joy, the perfect harmony and immortality of Life" which constitute "the only veritable man." (Science and Health, p. 242.)

Digitized by Google

What is the "strange land" where our oppressors, or would-be-oppressors, require of us a song, in mockery of our captivity, but the land of personal sense, the land of delusion, where the mirage of error—a fatuous belief of life and intelligence in matter—leads astray all except the God-directed and God-inspired. And here our Mother and Leader has taught us through the ever truthful and reliable pages of Science and Health how to "meet every adverse circumstance as its master."

The homesick Hebrews, holding the belief of Babylonish captivity as real, had not the measure of understanding which to-day is given to every humble, earnest student of Science and Health. To be able to voice spiritual harmony and strength instead of want, weakness, and woe: declaring words of self-sustaining, self-existent, and eternal Life in the face of famine and fear, causing strains of love and joy to rise triumphant above the throbs and wails of sorrow and depression—this is taking our harps from the willows and singing the Lord's song in a strange land.

It is the high, heaven-born privilege to-day of every Christian Scientist to sing not only daily, but hourly, the Lord's song—the song of Truth and Love—in a strange land.—E. W. S., Columbus, O.

Positive Statements.

If there is one thing more than another in the writings of the Rev. Mary Baker G. Eddy that has attracted my attention, it is the positiveness of her statements. After hungry and suffering mortals have turned in vain to *materia medica* for relief and strength, then have called on the clergy for spiritual comfort, and have received the cold consolation, "if God wills;" if then, when almost in despair, but still searching for light, some one gives them Science and Health to read, the first sentence their eyes rest upon attracts them because of its positiveness. With thoughts of past experiences coming up, they wonder if this is true. Then they read it again, and conclude the author speaks as one having authority, or as one having no doubts, and exclaim, What a sweet morsel! the first that has at all been satisfying. How eagerly they read on! Page after page is read; the reasoning is so clear that the statements no longer leave room for doubt. Before they hardly realize it, a new hope has sprung up in consciousness to be brought out in daily life, according to a fixed principle and rule. "Old things are passed away; behold, all things are become new."

I was one of those who were longing for something higher, better, and more permanent, and lo, I am finding it in the teaching of Christian Science.

M. O. F., Omaha, Neb.

Miscellany.

A Well-Wisher.

I was walking along one of the main streets of Indianapolis.

Suddenly a cheery "Hello!" rang out upon the air, and an old gray horse was reined up by the curbstone. A cheerful face peered out of the buggy, a few kind words were spoken, and we parted.

I had not taken a dozen steps when I heard a loud "Say!"

Upon turning around, I saw that the horse was again at a standstill, and the genial face of the Hoosier was peering out from under the back curtain of the buggy.

"What is it?" says I.

"I wish you well!" says he.

I had met this gentleman for the first time on the previous day. He was not under the slightest obligation to me, and there was not the least prospect of our ever meeting again; but he stopped his old gray horse, on a cold day in winter, to tell me that my destiny was a matter of personal interest to him!

"I wish you well," says he.

Long after he had dropped the curtain and vanished from my view, I stood looking after him.

Only a moment before, I had been pressed down by an unusual burden, for I was passing through one of those dark spots that we all find upon the journey of life.

But, somehow, after the kind old Hoosier had spoken those words, the burden rolled from my shoulders.

"He wishes me well," I kept saying to myself.

I had just been muttering over to myself all the hard things that had ever been said about the selfishness of mankind!

One of these infernal distiches that stick to the memory like burrs, and poison the heart like arsenic, had been ringing through my head as monotonously as an old cow-bell:—

> As I was walking by myself, myself said unto me,
> "Beware of thyself, take care of thyself: for nobody cares for thee."

Suddenly, like the song of the robin in spring, I heard the sweet refrain, "I wish you well, I wish you well!" and this from the lips of a stranger.

I am not ashamed to tell you that tears of gratitude filled my eyes, and that I cannot recall the words up here in my cosy study without a warm feeling around my heart.

He gave me no money, he did not offer me any substantial assistance in my pressing emergency, but he "wished me well."

I do not know what mysterious power was in that wish, but it seemed to carry me over a rough spot. It was just at that time that the tide turned in my life.

Perhaps it is literally true what Elizabeth Barrett Browning said, that "every wish is a prayer—with God."

At any rate, my experience gave the lie to that sneer of the Roman poet Plautus, "'He wishes well' is a worthless word unless a deed go with it."

What an atmosphere to fly in are good wishes! How easily the tired wings are sustained by them! How cheerily the sailor boy puts out to sea when his sweetheart stands on the wharf to "wish him well"! How bravely the regiment goes into the fight when mothers and wives stand on the brow of the hill, and "wish it well"!

Life is a hard struggle for most of us, and the least we can do is to "wish each other well."

Whoever you are down there in the arena, covered with dust, and half dead with the struggle, "I wish you well."

Perhaps I shall never have a chance to serve you, but "I wish you well."

CHARLES FREDERIC GOSS in *Sunday School Times*.

A Thrilling Incident.

There was a dramatic scene enacted at the Glad Tidings gospel tent Sunday afternoon. Nearly three thousand people, who crowded into and around the tent, were thrilled by it. It was a typical example of the effectiveness of the revivals.

Evangelist S. Hartwell Pratt was giving his preliminary notices of the work of the approaching week. As an especially interesting result of the previous week's meetings he was saying:—

"At one of the early meetings of the week a man strongly under the influence of liquor came to me and asked for prayer. I knelt and prayed with him, although I doubted the good that was being done. Friday night he was here, fresh and sober, telling me that that prayer has been an-

Digitized by Google

swered and he had been saved. God alone must have heard that prayer, for I do not believe that at the time the man was sober enough to hear more than a few of the words I said——"

"I beg your pardon, but I am that very man, and I thank God for His saving grace," interrupted a neatly dressed, earnest-faced young man in the middle of the congregation.

Without a moment's hesitation Evangelist Pratt began singing "Praise God from whom all blessings flow." The great throng joined in with fervor and enthusiasm which must have made the old tune heard for many blocks around.

Mrs. Russell Sage was among the many well-known Christian workers who occupied seats on the rostrum. She had with her a hymn-book, presented to her by Mr. Moody, and she was an active participant in the services of the afternoon. S. H. Hadley, the leader of the Water Street Mission, was also present.—*New York Journal.*

Dear Sentinel:—Which prayer was answered, that of the doubting Evangelist, or the unspoken, earnest desire of the penitent? W. T. VAUGHAN.

Jesus Loyal to Judaism.

H. Weinstock, a prominent Jew of Sacramento, has created considerable discussion by reading a paper entitled, "Jesus the Jew," in various synagogues on the Pacific coast. The following passage will give an idea of his point of view:—

"I found that, according to New Testament traditions, Jesus was born a Jew, lived a Jew, died a Jew. I found that he preached nothing but Judaism in its purest and simplest form. I found that the thought of establishing a new belief, or even a new sect, was furthest from his mind; that his aim was not to follow after the heathen, but to seek out the lost sheep of the house of Israel. I found that his mission seemed to be to uplift the lowly and to expose the wickedness in high places. I found that he gave his heart, his soul, and his very being to the poor, to the sick, and to the needy. He said, I am not come to heal the sound; I have been sent unto the sick. I found that he was a man of unbounded sympathies and of great moral courage; that he was simply striving to practise and to preach the moral code established by Moses and the Prophets, and to put literally into practice in his daily life the great lawgiver's precept of 'love thy neighbor as thyself.'"—*Times Democrat,* New Orleans.

Man's Duty Toward Evil.

Evil can sometimes be avoided, must sometimes be endured, and must sometimes be battled with. A man can be a man in all conditions in which he finds himself in God's service, if only he does his part in faithfulness and in faith. Old Quarles says: "He is a wise man that can avoid evil; he is a patient man that can endure it; but he is a valiant that can conquer it." Avoiding evil, enduring evil, battling evil, all may be done in God's strength, for God's cause.—*Sunday School Times.*

They have Christian Science on the rack in several places for the reason that certain subjects treated by Christian Scientists have died in spite of such treatment. But suppose they put all doctors who fail to cure on the rack. Men and women will die under all kinds of treatment. We say this without any knowledge of the methods employed by the Christian Scientists. But no system ought to be judged upon isolated cases.—*Republican,* Cedar Rapids, Ia.

The Universalist *Leader,* in alluding to the statement of the Methodist pastor that two invalids, members of his congregation, had, by aid of their faith and his prayers, been restored to perfect health, says: "The minister declared that his church might, in the future, be expected to be the theatre of miracles of healing." As a result his congregation has been very largely increased.

The *Observer* says: "See the toiling man on the handcars. How slow the speed; how wearisome or limited the process. See the engineer or motorman let on the steam or current that God's power may do his work. So the Church, with divine momentum, will rush on to mighty achievement when it opens its life to the inflowing of God."

Commenting upon the phrase "What would Jesus do?" the *Register* says, "The answer must be determined in part by what the inquirer believes about Jesus, what he was and what he did. The answer might be somewhat different if one should ask, 'What should I do if I were animated by the spirit that was in Jesus?'"

The *New York Witness* declares that "instead of trying to judge the Bible and criticising whatever we find in it that we cannot understand, the proper thing to do is to let the Bible judge us and show us wherein we fail to measure up to the true standard of Godlike manhood."

The power that makes for righteousness, says the *Christian Register,* may get in its work slowly, but it takes no vacations, knows no discouragements, and was never busier than now.

Proverbs of Solomon.

He loveth transgression that loveth strife: and he that exalteth his gate seeketh destruction.

He that hath a froward heart findeth no good: and he that hath a perverse tongue falleth into mischief.

A merry heart doeth good like a medicine: but a broken spirit drieth the bones.

Even a fool, when he holdeth his peace, is counted wise: and he that shutteth his lips is esteemed a man of understanding.

Better is the poor that walketh in his integrity, than he that is perverse in his lips, and is a fool.

A false witness shall not be unpunished, and he that speaketh lies shall not escape.

The righteous man wisely considereth the house of the wicked: but God overthroweth the wicked for their wickedness.

Whoso keepeth his mouth and his tongue keepeth his soul from troubles.

Proud and haughty scorner is his name, who dealeth in proud wrath.

There is no wisdom nor understanding nor counsel against the Lord.

Cast out the scorner, and contention shall go out; yea, strife and reproach shall cease.

Questions and Answers.

What are the first steps to be taken in acquiring an understanding of Christian Science?—A Beginner.

One who desires to understand Christian Science needs in the first place a copy of its text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy. This book should be faithfully studied in connection with the Bible. As fast as the ideas of Truth are discerned they must be put into practice. Here is where the real work of the student of Christian Science begins. From an intellectual standpoint the study of Science and Health and the Bible may be a very pleasant pastime, but a right conception of Christian Science cannot be gained in this way for it cannot be mastered by the human intellect.

The student must first demonstrate the rudiments of this Science; then the higher demonstrations will follow. He need not be surprised if he finds that all error does not at once yield to his declaration of Truth. To declare the Truth mentally is a step in the right direction, but the simple declaration is not sufficient. The Truth must be lived. By this is meant that one's actions, words, and thoughts should be in harmony with his declaration, for only in this way does Truth become sufficiently real to human consciousness to destroy the claims of error. Successful demonstration can only be the result of spiritual growth. Mere discernment of the letter is not sufficient, for this does not heal physically any more than it heals morally.

The student must not be a house divided against itself. He must not expect to succeed by declaring the Truth one minute and voicing error the next. His faithfulness to the letter of Truth, as he has discerned it, determines the rapidity of his growth and his success in demonstration. "If thine eye be single, thy whole body shall be full of light," is the declaration of Scripture. Constantly looking to Truth as the only reality of being, destroys the sense of reality claimed by error and proves its nothingness. Each demonstration over error brings a clearer realization of Truth, and this in turn, is followed by still greater achievements.

Thus the faithful student of Science and Health and other writings by the Discoverer and Founder of Christian Science, cannot fail to add daily to his understanding of Christian Science, and he will be able to prove by "signs following" that his faith is right.

❦❦❦

In the practice of Christian Science is it found that some diseases are more difficult to heal than others?

Same Inquirer.

All diseases are a manifestation of the one error that life, substance, and intelligence are material. The declaration of Christian Science that God is the only Life, Substance, and Intelligence is the axe laid unto the root of the tree. When the root is severed the tree with all its branches must fall.

One disease, as a disease, is no more difficult to heal than another, but some beliefs are more tenacious than others, and seem to be harder to overcome. In Christian Science practice mental conditions, rather than physical, determine the nature of the case and the patient's recovery. Protracted or incomplete healing cannot be accounted for on the ground that, according to medical diagnosis, the disease with which the patient is afflicted is more difficult to heal than other diseases, for no doubt instances could be cited where the same disease, though in a worse form, has been healed instantly or in a very short time.

The Christian Scientist believes that "with God all things are possible." He also knows that he must understand God and be governed by Him, if he would gain that realization of the divine Presence and Power which destroys the sense of moral or physical evil. If the healer understands the Principle that heals, and the patient is willing to part with moral as well as physical error, all forms of disease can be readily overcome.

Testimonies.

Score One for Christian Science.

The Scientists have scored a great gain in public sentiment in this community during the past few weeks, and they are therefore feeling very much encouraged. Some will say of course that the work they are accomplishing is but the work of nature, the natural result of a tendency on the part of the human system to overcome its own ills and weaknesses, and in a measure this theory may be true. The case which has brought this society into unusual prominence in Momence during the past week is that of a fourteen-year-old boy, the son of Mr. and Mrs. Arden Sherwood of this city.

Last September while out hunting with a small rifle, the boy was shot in the mouth while blowing the smoke out of the barrel of the gun. The discharge, of course, was an accident. The bullet penetrated the roof of his mouth, and the boy insists from the nature of the pains which followed the wound, and which he had never been free of until lately, that it passed to the back of his head and lodged there. The doctors probed for the bullet but were unable to extract it. About eight months have elapsed since the accident occurred, and during that period the boy has suffered intensely at times, and more or less all the time. Sometimes he has been confined to his bed for days, and then again he would be about the house, and at other times go with his father to the shop, or on the delivery wagon. At certain periods the pain would be so acute that he would cry out in distress. His parents lived in constant fear of derangement of the mind, and his father especially looked for symptoms of this nature constantly.

The advisability of taking the boy to Chicago, and having an operation performed was seriously discussed. But finally Mrs. Little, who is a Scientist, while at the home of the Sherwoods one day, suggested that the boy have Christian Science treatment. The family agreed to it, and Mrs. J. W. Tower, of this city, took charge of the case. A few days after treating him the pain began to subside. Last Saturday was the eighth day. In the morning, after Mr. and Mrs. Sherwood had been up but a short time, they heard a startling exclamation from the boy who was upstairs. Mr. Sherwood rushed to the foot of the stairs, and saw his boy standing at the top of the stairway with a wild unnatural expression on his countenance, and both arms extended in the air. The first thing which entered his mind upon seeing the boy, was that his worst fears were realized, and that the long-expected attack of insanity had come. His fears were soon dispelled, however, when the boy produced the bullet with which he had been shot, and described where it came from. He had felt a tickling sensation in one nostril, and drawing in his breath quickly through his nose, something dropped into his throat. This caused him to cough, and out came the bullet. The boy was so rejoiced that he danced with delight, and could hardly express himself, while his parents were relieved of a load which has been weighing heavily upon them ever since the shooting occurred. All pain has left the boy and he seems to be fully recovered.

When asked by a reporter if he gave all the credit to Christian Science, Mr. Sherwood replied that he did. "As soon as Mrs. Tower commenced treating the case, or very soon after," he added, "there was a marked improvement, which continued until the bullet was dislodged, and perfect health restored."—*Momence (Ill.) Press-Reporter.*

Severe Burns Healed.

Reading the account of Mr. Stephenson's injuries from burns and his successful treatment through Christian Science recalls my own case, which was so extreme as to render any doubt of Christian Science being the remedial agent impossible and should convince the most sceptical.

About four years ago I met with a serious accident in my father's trunk factory in this city. The gas had been left burning in the drying room, and from lack of oxygen the light had gone out, leaving the gas escaping. Having occasion to go to this room after dark I thoughtlessly lighted a jet in the large room adjoining and then opened the door of the drying room. The gas ignited, causing a terrific explosion, breaking all the windows in the building and some across the street, and shook buildings several blocks away. I was thrown across the room, unconscious. On rallying I realized that I was terribly burned and my suffering was intense. I believed firmly in Christian Science and my one thought was to grope my way to the street and call a carriage without arousing excitement. This I did, and put myself immediately under Science treatment, with no thought of seeking relief from any other source.

My face, hands, and wrists were badly burned. There was not a spot on my face as large as a pea that was not burned through the flesh. The back of one hand was completely torn off, leaving the muscles exposed. My lips and the inside of my mouth and nostrils were so badly burned that I could not take food that required chewing or breathe through my nose. My eyes were badly burned inside and outside, and those about me said I had lost all semblance to a human being. My face and hands were swollen twice their usual size. There was also a deep burn on my chest, and this, with the condition of my mouth and nostrils, indicated that I must have inhaled some of the fire.

In about two hours all pain was destroyed and I did not suffer a particle from that time.

The healing went on rapidly. Before the end of a week I could chew my food, and in less than three weeks both face and hands were perfectly well and I returned to work. There was not a scar anywhere, or a stiff joint or muscle.

The treatment was wholly according to Christian Science principles. No material application or bandages were used; no antiseptics; no opiates. My eyes are clear and strong, and I feel thoroughly convinced that my healing was an indisputable manifestation of the power of Christian Science. I have seen many persons with less serious burns than mine badly disfigured by scars and drawn muscles, even after having the best medical attention.

MARION FRELING.

Kansas City Journal.

Testimony of Dr. George H. Jackson.

At a recent Wednesday evening meeting of this church, Dr. George H. Jackson, of Marion, Ind., worshiped with us. He stated to the congregation why he was a Christian Scientist. "I suffered for more than thirty years with those dreadful diseases known to the medical fraternity as chronic diarrhœa and hemorrhoids or piles. Having studied and practised medicine, every remedy known to me was given a trial, but without any lasting benefit. Other diseases made their appearance, among them kidney, stomach, and liver trouble, closely followed by heart disease. The most of these diseases lasted fifteen to twenty years. Getting no benefit from drugs I tried what was known as the magnetic mud baths, but this did not prove satisfactory. I then resorted to electricity with the same result. Later I tried dynamization, but this was a failure. Discouraged and disgusted with material means, I no longer sought the physicians, but my God. At this period I heard of Christian Science, and decided to investigate it. I secured a copy of the text-book, 'Science and Health with Key to the Scriptures,' by Rev. Mary Baker G. Eddy, and began to read. The first sentence in the preface, 'Leaning on the sustaining Infinite, to-day is big with blessings,' gave me encouragement, and by reading and studying this book I was healed of all the diseases named. In addition to the physical healing it has made me a better man morally and spiritually. If there are those who have any ailment, bodily or mental, 'Go thou and do likewise.'"

Dayton (Ohio) Weekly Herald.

Be of Good Courage.

BY J. E. TIPPETT.

INFINITE Mind! When I would know
Thy righteous will,
A voice replies, in whisper low,
"Rest, and be still.

'Tho' clouds obscure, thine eyes should seek
The perfect way:
I lead the contrite and the meek
To brighter day.

"Dispel the claims of mortal mind!
Cast off its chains!
Assert thy freedom! Thou shalt find
My love sustains.

"Ask and receive! My promise sure
Shall never fail.
Disperse all doubts! If thou endure,
Thou shalt prevail.

"I'll give thee, from thy foolish fears
A sure release;
And keep thee, thro' the coming years,
In perfect peace."

Notices.

Beginning with September, 1899, the rates for the *Sentinel* will be as follows:—

SUBSCRIPTION PRICE.

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

THE eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.
In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Price, (cloth), each	$3.18
Two to Twelve books to one address, each, prepaid	3 00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5 75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid	$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid	$3.00
Twelve or more books to one address, each, prepaid	2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5 00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2 50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2 00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, C. S. D., Publisher,

95 Falmouth Street, Boston, Mass.

Published by the Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of the First Church of Christ, Scientist, in Boston, Mass

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States and Canada. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services in all the Christian Science Churches throughout the year.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States and Canada.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1; six copies to one address, $5; twelve copies to one address, $9.

THE CHRISTIAN SCIENCE HYMNAL. Bound in two styles—cloth and leather. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Leather, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50.

THE MOTHER CHURCH. BY JOSEPH ARMSTRONG. A History of the Building of the Mother Church, the First Church of Christ, Scientist, in Boston. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS in Massachusetts and New York. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. 32 pp.

One copy or more, each, 10 cents; 12 copies, to one address, $1.00; Twenty-five copies to one address, $1.75; 50 copies to one address, $3.00.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. | BOSTON, MASS., AUGUST 24, 1899. | Vol. 1 No. 52

Roosevelt to Methodists.

The Governor Talks of Honesty in Politics and Denounces the Timid Good Man.

GOVERNOR THEODORE ROOSEVELT delivered an address on "Practical Politics and Decent Politics," to an audience of over twelve thousand persons at Ocean Grove, N. J., August 3. The address was delivered under the auspices of the Ocean Grove Summer School of Theology, and was in part as follows:—

"When I am addressing a body like this I naturally like to speak on the question of political life, for in a country such as ours the political life must in the long run correspond to the social and religious life.

"It is idle for the mass of good citizens to try to set themselves apart as not responsible for our political shortcomings. In the end the politicians must be exactly what the people allow them to be. They must represent the people—perhaps the vice, perhaps the virtue, perhaps the indifference of the people. This does not in the least excuse politicians that are bad, and we must keep in mind the fact that every vicious politician, above all every successful politician, tends to debauch public conscience, to render bad men bolder and decent men who are not far sighted more cynically indifferent than ever.

"But in blaming the politician, do not forget that we are ourselves to blame for permitting his existence. Again, do not let us fall into the mistake of thinking that we shall ever make politics better by hysterics in any shape or form. Wild denunciation of all politicians, good and bad, is the very thing most advantageous to the bad politician, because such denunciation, being one half false, loses all practical effect, as it is impossible to separate the true from the false. In the same way a place second in infamy to the man who is dishonest in politics is occupied by the man who wrongfully accuses him who is honest of dishonesty.

✤

"Entirely apart from the wrong done the individual by such an accusation, it is of the gravest of wrongs to the state, for it tends to excite disbelief in the honesty of good public servants, and also, as its falsehood is sure to be partially appreciated, tends to excite disbelief in the justice of any charges against public servants, good or bad. In consequence the public gradually grows calloused. It expects to see all public men assailed, whether they have been faithful or unfaithful, and gradually assumes the cynical habit of belief that, on the one hand, no public man is entirely honest, and on the other hand, no attack on any public man is entirely just, and that therefore there is no use in worrying over one or the other.

"Remember, then, that your highest duty to the state is to see that you do all that within you lies to elevate the standard of public life, to demand honesty and efficiency in your public men, and to frown on the system of lying slander which would teach you that there is no good and no bad, no black and no white, that everything is gray, and every man a time-server who will do as much ill as he dares.

"We have a right to demand from our good citizens that they apply themselves, not intermittently but steadily, to their public duties; that they make it their business to know how their public representatives stand and what they do, and that they keep our politics at a constantly high level. We never can have politics on a satisfactory basis in this country until we make it understood that dishonesty in a public servant is an unpardonable sin; that corruption of any kind will not be condoned for any consideration of party expediency. When it is thus understood that the first requisite of a public servant will be honesty, when we rule out once for all any system that is corrupt, then, and not till then, will we have the road free for our political development, for the fighting out of political issues on the proper plane.

✤

"Now, this is decent politics, and, therefore, it is practical politics. But it is by no means all that there is of practical politics. It is not enough for you to do what is honest yourselves and to insist upon honesty in others; it is not enough for you to act up to what you believe to be right. You have also got to possess courage, and, finally, you have got to possess common sense. Courage, because if there is one individual who is not entitled to exist in a community like ours it is the timid good man. You all of you remember how Wesley, when remonstrated with because his hymn tunes were considered too joyous, too full of fire for religious music, answered that he did not intend to allow the devil to monopolize the good tunes. Just so we should be careful not to let the devil's agents monopolize the courage and the common sense, while the workers for righteousness confine themselves strictly to high principles and good intentions.

"If good people are afraid to assert themselves, if they shrink from the hurly-burly of politics, if they won't go to caucuses and the polls, and confine themselves to lamenting the amount of evil there is scattered through the world, they are not going to make much progress, and the politician who has neither fear nor scruple will always beat those who have scruples, but who also have fears.

"To beat him as he should be beaten, you have got to marshal the men who are scrupulous in their morals, who believe in decency and right, and who, so far from having any fear, are ready, if need be, to smite with the sword of

the Lord and of Gideon. So it is with common sense. A corrupt political ring can only fasten itself upon a community if it exercises great shrewdness, and if its opponents lack either this shrewdness or sturdy moral courage nothing can avail against the corrupt machine's success.

"In New York I firmly believe that the decent people could combine to overthrow the civic corruption if they only would; but, as a matter of fact, they are so apt to fight one another, so apt to quarrel as to exactly how high the ideal of their government shall be, that they too often throw the victory into the hands of those who have no ideal at all, and who, in addition to a cynical belief in the power of corruption and in mere demagogy also set about their work with the practical common sense that you expect a man to show in managing his own business. So long as good men are mere visionaries they do not accomplish very much. Of course, they have got to have the good side of the visionary in them, or else they won't be good men. When a man ceases to strive to make manhood better, ceases to believe in a higher ideal and to endeavor to realize it so far as his own limited powers and the human frailty of those about him permit, why, he ceases to be useful at all. The one trait which of all others seems to me the least admirable in our national character is the tendency to deify mere smartness, mere success, without regard to whether the success is obtained by worthy or unworthy methods.

"We should be ashamed of ourselves for treating the successful rogue differently from the way we treat the unsuccessful rogue. The bad man who rises high either in politics or in business to the extent of his success is by just so much more a danger to the whole community. But while abhorring success obtained in this manner we must remember that it is always our duty to achieve such results where possible. We must vote according to our consciences, but we must make up our minds that something is wrong with our consciences if they always teach us to cast our votes in a way that never has produced and never will produce the slightest practical result.

"Take Abraham Lincoln's words when he said that if he could not get the best, then he was going to get the best possible. Never be content with evil, never accept apologies for what is bad, but do not throw away the chance to get good merely because it is not the best that under ideal conditions could be obtained. Moreover, in politics remember especially that you want to mix with your fellows, and, above all, with the good men whose ideas of what is right and proper do not in all respects square with yourself. So far as you can, respect their prejudices, and remember that you doubtless have a good many of your own of which you are entirely ignorant. Try to strike hands in the effort and struggle to obtain what you both believe in instead of wrecking everything to the profit of the worst foes of both of you by quarreling over the points on which you cannot come to an agreement.

"To a body like this I do not have to preach the gospel of work. I have been a pretty careful student of the history of the Western growth of the republic, and nothing in it has impressed me more than the tremendous energy, the unflagging zeal, the untiring resolution of the early Methodist missionaries, to whose labors was so largely due the extraordinary spread of Methodism throughout the West, as throughout the rest of the country, from the closing years of the eighteenth century onward. They scorned a life of ease. They joined in the hard and strenuous life of those who work unceasingly, and found greater pleasure in work thus undertaken with a high purpose, thus carried on with stern determination, than they could find in any luxury or soft ease of living. If you seek only your own ease and pleasure you can do no more in politics than you can in social and business life.

"You must work, and work hard, work fearlessly. You must strive, knowing that you will fail again and again, but resolute to preserve that unshaken courage to face failure, and from failure to wrest ultimate triumph.

"So, then, practical politics must be the politics of decency, but also the politics of courage, of common sense, of hard work. You must have high ideals, but you must not follow them with your heads in the air, blind to the practical methods by which alone they can be even partially realized on this earth. Your main duties will even seem commonplace and humdrum.

Items of Interest.

Maitre Labori, counsel for Captain Dreyfus, was shot on the morning of August 14, while on his way to the court-martial proceedings. On the day previous he received two threatening letters, but he treated them with contempt, as he had treated numerous other letters of a similar nature.

The man who fired the shot was evidently one of a number of conspirators. As soon as M. Labori fell two men rushed to his side and rifled his pockets. The wounded man retained his presence of mind and refused to let his wallet, which contained important papers, be taken out of his hand. At last report he was improving, and his physicians are hopeful of his recovery.

The situation in the Transvaal remains unchanged. The Boers continue to delay to answer Great Britain's demand for a joint inquiry. In the mean time preparations for war are being made on both sides. Great Britain has an emergency force of twenty thousand men ready to sail at once, while the Transvaal government is purchasing all the mules possible, paying as high as one hundred dollars for each animal. Mauser rifles are also being distributed.

The Second International Zionist Congress assembled at Basel, Switzerland, August 15. A plan for the colonization and removal of suffering Jews to Palestine was one of the most important subjects considered. Max Nordau, one of the principal leaders of the movement, believes thoroughly in the feasibility of the idea, and said that in the establishment of a fatherland for the Jews, the dream of the exiled Hebrew would be reached.

President McKinley, upon the recommendation of Secretary Root and General Miles, has ordered the recruiting of ten additional regiments of volunteers for service in the Philippines. When these regiments are organized thirty thousand of the thirty-five thousand men authorized by Congress will have been enlisted, and it is expected that the remaining five thousand will be enlisted later.

President Lucius Tuttle of the Boston and Maine railroad says that coke is a better fuel than coal for locomotives, and the road he represents will use it entirely as soon as the locomotives can be changed to meet the requirements. The cost of coke is about the same as bituminous coal, while the advantages are many. The road will consume nearly five hundred thousand tons a year.

The War Department has sent supplies to the sufferers at Porto Rico as fast as possible. Generous contributions of money, food, and clothing have poured in from all sections of the country. New York City and vicinity has contributed over eighteen thousand dollars, Boston over ten thousand, Philadelphia five thousand, and other cities accordingly.

Marshal O. Waggoner of Toledo, O., formerly one of the most pronounced agnostics in the world, has been converted to Christianity and united with the United Brethren Church. His library, valued at several thousand dollars, and containing the works of every author of note who wrote in defence of infidelity and agnosticism, will be burned in a Toledo street.

General Garcia recently had a conference with General Miles regarding the formation of a militia for Cuba, to be composed of and officered by Cuban soldiers who served in the war. It is proposed to have the militia take the place of the United States army now in the island. General Miles considered it an excellent suggestion.

The Kansas Agricultural Board says the corn crop promises to be the greatest yield ever known in the state. The acreage is 8,234,500, and the estimated yield is forty-four bushels per acre, or three hundred and sixty-two million bushels. This is almost a hundred million bushels greater than the banner year of 1889.

A Chicago judge recently imposed a fine of fifty dollars and a sentence of thirty days in jail, upon an alleged attorney in a suit in which the attorney was acting as counsel. The judge took the occasion to say some sharp things about incapable lawyers and "diploma mills."

President McKinley visited the Catholic summer school at Cliff Haven, on Lake Champlain. In his brief speech he said, "Our patriotism is neither sectional nor sectarian. We may differ in our political and religious beliefs, but loyalty to the government is our national creed."

The Annual Congress of the Co-operative Society of Great Britain, opened at the Crystal Palace in London, August 15. The feature of the opening session was the presidential address of Rev. Dr. George C. Lorimer of Boston, on "The Emancipation of Industry."

The rebuilding of Mr. Spurgeon's church—the Metropolitan Tabernacle in London—is progressing. About £16,000 has been subscribed in addition to the insurance. About £6,500 more will be needed to complete the structure, which it is hoped will be finished by spring.

Since the murder of the colored postmaster at Lake City, S. C., the postoffice has been closed. There is no white Republican available, and no colored man is willing to imperil his life by accepting the position. It is now proposed to appoint a white woman postmistress.

Information has been received at Manila that Lieutenant J. C. Gilmore of the United States gunboat Yorktown, who with fourteen others were captured by the Filipinos last April, is now safe at Luzon. He is allowed a house and a servant, and is fairly treated.

Secretary Root has determined that the army in the Philippines should consist of at least five regiments more than the fifty thousand troops now being mobilized for service in the archipelago. The recruiting of volunteers will be continued indefinitely.

A novel chair is to be founded in Berea College, Berea, Ky. In the will of a Massachusetts clergyman there is a bequest for founding a professorship for teaching young men and women the dangers arising from the use of tobacco and alcoholic drinks.

At the Windsor flower show sweet peas are exhibited which were grown from seed taken from the tomb of an Egyptian mummy buried two thousand years ago. The blossom is of a delicate pink and white, and is less than the ordinary size.

The Russian government has decided that in the future any university or high school student who shall be guilty of creating disturbance, shall be forcibly drafted into the army and compelled to serve from one to three years.

Colonel Albert L. Mills, the hero of San Juan Heights, has been appointed superintendent of the Military Academy at West Point, and has succeeded in abolishing hazing by appealing to the honor of the cadets.

The convention of the National Association of Postmasters will be held in Washington, D. C., November 7 to 10. Postmasters of all first-class offices will receive one week's leave of absence to attend.

Congressman Foss of Illinois, is making a tour of inspection of the naval stations and yards all over Europe, for the purpose of collecting information to be used in improving the American navy.

The question of establishing a giant clearing house, embracing the whole country, will be considered at the convention of the American Bankers Association to be held in Cleveland next month.

The Anti-Imperialists are sending Edward Atkinson's Anti-Imperialistic literature to all the commissioned and non-commissioned officers of each regiment that return from the Philippines.

President McKinley will not be able to withdraw the United States troops from Cuba before next spring. He will await action by Congress as to the future of the island before doing so.

The collector of customs at Baracoa in the province of Santiago de Cuba, recently seized 143 carbines and eighteen thousand rounds of ammunition evidently intended for San Domingo.

San Francisco and New York capitalists have secured a charter for a national bank to be established in Honolulu. The corporation is capitalized at one million dollars.

President McKinley has accepted an invitation to attend the reception of the 10th Pennsylvania regiment in Pittsburg upon its return from the Philippines, August 28.

The Navy Department at Washington has received a letter from Admiral Dewey calling attention to the courtesy extended him while in Trieste.

The United States transport Warren arrived at San Francisco August 16, having on board the Colorado regiment.

The German consumers of pig iron have bought ten thousand tons from America for immediate shipment.

During the war with Spain the American Bible Society sent nearly seventy-five thousand Bibles to the front.

Ambassador Choate and family left London on the 11th inst., for a holiday of a month.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

SEPTIMUS J. HANNA, C.S.D. Editor. CAMILLA HANNA, C.S.D. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety cents.
Twenty-five copies or more to one address, one year, each copy, eighty cents.
Fifty copies or more to one address, one year, each copy, seventy-five cents.
Foreign subscriptions, one year, each copy, $1.50.
Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Two cents a copy, postpaid, to any address; twenty-five copies, forty-five cents; fifty copies, eighty cents; one hundred copies, $1.50.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Bad Statistics.

PHYSICIANS and some of the officials of greater New York are industriously gathering statistics of Christian Science "casualties," including cases of insanity, suicides, etc. The entire list, foreign and American, according to a recent number of the New York *World*, from and during, 1896, is forty-two. Some of those mentioned were not in charge of Christian Scientists at all. Some of the cases of insanity were as far removed from Christian Science as possible; and some of the cases alleged to have been in the hands of Christian Scientists at the time of death, in fact, were in charge of physicians.

During this time many thousands of persons—some of them abject invalids given over to die by physicians—have been treated and healed through Christian Science.

Suppose our statisticians turn their attention to the list of "casualties" among physicians, for a similar period of time, comparing relative numbers!

Christian Scientists would welcome such a comparative table and rejoice in its showing.

When Love is Needed.

WHEN do we need love most, if not when we deserve it least? When we are satisfied and happy the need of love is not keenly felt, but when clouds gather and we are inclined to be fretful and fault-finding, patience and love in those about us count at more than double their normal value. We should keep this fact before us in dealing with others, and check the impulse to close our hearts against them when they manifest discord or enmity.

As Christian Science marches on in human consciousness to higher and higher planes, greater and greater becomes the demand for love—that love of which Paul tells us, the love which suffers long and is kind, which envies not, which is not easily provoked and endures all things. We need this love both in our home and public relations, and nothing will serve as a substitute for it.

The Master said, "If ye love them which love you, what thank have ye? for sinners also love those that love them. . . . But love ye your enemies, . . . and ye shall be the children of the Highest: for he is kind unto the unthankful and to the evil. Be ye therefore merciful as your Father also is merciful." We all find it easy to love the lovable child, or woman, or man, but those whose nature seems harsh and badly tempered, do not readily appeal to us, and love is often withheld from such persons when their hearts are famishing for it.

When we face the infinite demands of Christian Science we discover how deep down are the roots of wickedness in our consciousness. Underneath the mask of politeness and good fellowship, is the fierce, vengeful spirit that demands an eye for an eye and a tooth for a tooth. This spirit of savage reprisal crops out in many ways that once were not noticeable to us, but in the clear light of Science we see our error and are humbled. We see that we must learn to love under all circumstances, and often it seems impossible, but there is no other way by which we can fulfil our duty to our neighbor, and there is no other way of casting the evils out of ourselves.

As Christian Science continues its work of healing and saving mankind, mortal mind will, no doubt, become more violent in its opposition, more unjust in its persecution, and therefore we must "watch" to see that there is no slumbering beast in our hearts to be wakened by the clamor of the dragon.

If a Scientific Christianity is not the world's great need, what is?

He who, in daily life, reflects most of Good, is thereby best fulfilling his mission as the image and likeness of God.

The God of Abraham, Isaac, and Jacob still reigns.

What the world needs is less creed and more Christ; less dogma and more doing; less preaching and more practice; less profession and more prayer.

With the dawn of day the darkness disappears.

The mystery of iniquity is vastly greater than the mystery of godliness.

God never appoints two persons to fill the same place. When Love prevails, each one, in humility, fills his appointed place, and harmony reigns supreme. The successful man is the one who seeks to find his own place, and then to fill it. He who seeks in honesty and sincerity is sure to find.

In the present, we can find happiness and prosperity only when we fill our own niche. If we get out of our place, or attempt to do so, we produce discord.

We must not allow error to discourage us and cause us to turn back. "Let us not be weary in well doing: for in due season we shall reap, if we faint not," says Paul, and his own experience proves the truthfulness of his words.

We must know what is right before we can do right; but if we do not do as well as we know, how can we expect to grow and gain a higher sense of right?

If, by indulgence, we make a reality of the error we call a little thing, how shall we make nothing of the greater error?

Immortal Mind.

Love's work and Love must fit. — DAYTON.

IN the February number of the *Independent*, on the second page of the contribution under the title, "Mortal Mind," the types print the word *bravest* where it was the intention of my pen to write the word *barest*. That clause of the sentence properly should read: "This physical manifestation is, in reality, the *barest* incident, though an essential and inevitable one, of the recognition of Immortal mind."

Perhaps though, after all, there is not much objection to the word bravest, for it is a brave thing to have good health. A sick mind must produce a sick body; while a healthy mind will inevitably find its expression in a healthy body. There are at least a couple of phases of our conventional religion that strike one as bereft of all congruity. One of them is the serious regard awarded to so-called physical disease. Almost anybody will admit that the body is made from a sort of hash, say bread and butter, or hog and hominy, or beans, as the case may be—diluted or floated with water, coffee, and in some instances with fluids of more vicious reputation. Now no one of these articles in its place on the table has ever probably interpreted to any one a sense of pain in itself. Yet the compound of such foods stowed away in the flesh and blood and distributed from the gray matter of the brain to the nails on one's toes, we immediately endow with such a sense of life as to give it almost unlimited, and at times irresistible, influence over our health and happiness. It was the supreme ridiculousness of this phase of the proposition which drove me to the abandonment of ten years of complacent servitude to that most aristocratic of diseases—nervous prostration. This performance of clothing with entity, or being, as though it was self-existent, that which in itself has no life, is well described in the Christian Science writings as the work of mortal mind. Considered from this standpoint, what we are accustomed to term bodily disease and the things we term evil, are in reality totally unreal, because they get their extension and operation entirely from acknowledgment. The dilettanteism of mortal mind, its affectation of control, of knowledge and supremacy, which takes the form of an artistic delight is, when the facts dawn upon one, as viciously absurd as it is violently impious—and can be but the inevitable product of thrusting out of the mind any adequate recognition of the Infinite mind and our relation thereto.

And this brings me to the other phase of conventionalism—which is our uniformly profound respect for evil, by which we construct in our consciousness such a degree of acknowledgment of its reality and permanence as to make it part and parcel of the Divine economy. Nor has it come to my knowledge or attention that any of our scholastic systems have risen to such profound recognition of the One Life as to deny any degree of substantiality to evil. Old churchism and materialism do not separate upon the proposition; for one admits duality in worlds and duality in the individual life just as much as the materialist gives life to matter, even down to looking up wisely from its microscope to announce that just beyond, where that instrument fails to disclose, lies the vital spark which has life in itself. The atomic theory and the microbe theory are twin products of the denial of incarnation, and the avowal of a merely historic or histrionic divinity. Nor can it be said that New Churchism is one whit behind in this procession of materialism. In the face of Swedenborg's announcement denying the divine right and personality of the Devil—and his clear demonstration that evil is wholly excrementitious—and his repetition well-nigh to the thousandth time in his two dozen octavo volumes, that there is no verity in the universe but the Divine Life—the prophets of the New Jerusalem wear the same sackcloth and lie prone in the same ashes of despondency, as their brethren of other scholasticisms.

. . . . . .

A duality of acknowledgment and recognition of royalty to each of two claimants to the mind, cannot leave any state of harmony in the life, but must precipitate most tortuous combats. Thus to bow to the Divine Name with an eye cast askance at the absolutism of evil, does violence to the integrity of the mind. The double-minded are always unstable, and even in politics this country has learned that a house divided against itself cannot stand. In fact, how can one serve both God and Mammon? If he acknowledges to one, he is perforce bound to deny the other. Clearly, the sighs of the saints arise from duality; for when the eye is single the body is full of light, and sighs flow from darkness. If a brief attempt were made to catalogue the incongruities, it might read like this: Over against the acknowledgment of the Creator, the Divine Life and Love, the Eternal and Immortal Mind,—we would set the Devil as personified Evil, absolute, real, and permanent. To the incarnation of Good, as its counterpart must follow the incarnation of Evil. To the entity of spirit, put as its antonym, matter. To that of soul, mark as a verity, mortal mind. Here you have two lines of substances, involving two substantial postulates as the premise each for a separate logic. They are worth noting, for theology, psychology, and ethics, begin upon these two.

The logic of the postulate of reality to Good, is Immortality.

The logic of the postulate of reality to Evil, is,—here is where the team stalls,—the radiant word Immortality cannot be written here, the pen stops with the mind, while we look for some word that has no such sanctity of divine relation, and we soften it to *continuity*, or *persistence*. In other words, the two postulates are exactly contrary. If one is true, the other is false. If Good is real, Evil is not real. If one is substance, the other is not substance. The Gordian knot of the problem of evil is assailed and cut by the sword of Truth. The hand of man has more than once approached this problem with sword drawn to administer the blow of severance, but the head restrained and the heart quailed. The logic machine tends to the function of the guillotine, and often beheads the agents of liberty as the emissaries of tyranny.

Undoubtedly it was the pen of a woman that most effectually pointed out the weak spot in the second postulate, as to the reality of evil. Scholasticism has always resented where it could not answer. But the reduction of evil to the activities of mortal mind by Mrs. Eddy, in her textbook on Christian Science, without regard to the logic of the schools, is a work of largest portent to the emancipation of humanity. The pages of this book are full of acknowledgment of the divine Name as the very Life of our life. As it denies absolutism to evil, it points out that the assumption that mortal mind, or selfhood, has entity in itself, is the ground upon which reality is presumed as a quality of evil. Now if mortal mind has no entity in itself, it cannot give entity to evil. The practical applications then of the laws of Immortality are no longer deferred, but the Incarnation becomes a vital fact available now; for the duality of the world is set at naught, and the incubus which has hung over mankind by theologic presumption is pierced. No doubt an immense benefit inured to mankind by the overthrow of the idea of a personal devil. Why that revelation to our ideas, which began nearly a hundred and fifty years ago, was not more quickly followed by this one in regard to the character, and source of emanation of the phenomena of

Digitized by Google

evil, may be a matter of speculative wonder, but does not concern this present writing. To get out of our minds the dominance which has been accorded to evils, and the fantasies we personify as devils, drives us to the battle hand to hand in our own "temple of flesh;" and by the unlimited acknowledgment of creaturehood there comes the availing acknowledgment of the one Life which brings healing in His wings into the mind, manifesting its harmonies down to the very utmost and outermost flesh and bones of mortality. Nor does the formula presented to us depend upon any enlarged comprehension of the learning that is assumed to be vital, or in any sense the *sine qua non* of condition, upon which alone the Divine Life can be accepted in the palpitating and trembling heart of humanity.

The spontaneous life of creation can easily be tested in one's own life; for, like the sunshine, it is only obscured by clouds which themselves are unreal, being but the emanations of mortal mind thoughts. These are displaced by thoughts of real recognition of Immortal Mind, and denial of reality to anything not in eternal accord therewith.

> The flux of power is eternally the same,
> It rolls in music through the ages,

now, as always; to the Greek (in mind) foolishness, as to the Jew (in mind) a stumbling-block. If idolatry, mysticism, and dogma, have been merely creations of creaturely activity that survive in the decadence of Demonology—they too begin to perish at sight; and while any one endowed with a sense of humor will be heartily amused when a sense even of his physical infirmities, as conventionally termed, dawns upon him as but the activity of his one only bitterest enemy—his mortal mind or self-consciousness—assuming to itself an entity or self-existence; his amusement will bear testimony God-ward. It is just this thing in Christian Science that makes the advent of its regime so refreshing in the dreary waste of our theologic "staked plains." However interesting the truth is in its phenomenal expression, the value of its testimony is to force and compel us beyond, to the noumenal, the real, and the eternal verity. Thus whatever imports into our actual every-day life the recognition of Immortal Mind, by demonstration that mortal mind is totally fallacious, even in our very aches and pains, avouches the Divine Life, into our individual and civic institutions, and contributes to the fulfilment of that pledge afforded to us by the historic Jesus Christ; for the evidence is such that it is carried about; and however pleasant concurrent testimony may be, it is only confirmatory, not primary, or essential.

Undoubtedly we have so intensely personified the Divine Name, as the Jews royalized it, as most effectually to crucify it and put it to an open shame. For by such putting of the Infinite Mind out of human life, we have set up a separate entity in mortal mind, clothing that with self-existent personality which is in itself a no-thing, and most properly named in the terms of solecism as "mortal mind." The suggestions of Christian Science come teeming with practical and immortal solutions—clearing away cobwebs that have accumulated the dust of ages. And we sing with Whittier:—

> The letter fails, the systems fall,
> And every symbol wanes:
> The Spirit over-brooding all,
> Eternal Love, remains.

Again heart and head look up in humility and adoration, and man claims his heritage of immortality, without fear, cringing, or mendicancy, assured in his affections and in his consciousness, that "The Spirit of God hath made me, and the breath of the Almighty hath given me life." Such an atmosphere will make of any life an irresistible and unbroken song.

Brooding Over Evil.

Became vain in their imaginations, and their foolish heart was darkened.—ROMANS, 1:21.

THE imagination plays a more important part in our lives than we are apt to believe. I dare say that if you could give me control of your imagination I could make you happy or miserable at will. To curb and train the imaginative faculty, therefore, is just as necessary as to discipline a wild horse fresh from the prairies before you can hope to make him useful. I do not overstate the truth when I say that until you have your imagination well in hand you cannot be religious in any high sense.

We brood more than we are aware of, and we reason impartially less than we think we do. A perfectly fair view of any subject in which prejudice may possibly affect our judgment is one of the most difficult accomplishments of human nature, because prejudice is strong and domineering, while reason is weak and fickle. A prejudice gets possession of us at once, while reason comes lagging on behind. Prejudice may even indulge in a *coup d'etat* and so entirely capture the reason that entire fairness is out of the question. This is only another way of saying that we feel more quickly than we think, and that the feeling may do great injustice to friend or foe before reason can come to the rescue and set things right.

Now, prejudice has no place in a true man's life, and a mere impression as a substitute for calm and sound judgment may be followed by consequences which we shall later on regret. And prejudice is the offspring of imagination. We dream of circumstances which may or may not exist, and on the strength of these vain imaginings we make our decision on very important subjects, and frequently the decision is not only discreditable to ourselves, but unfair to others and will not stand the test of a reasonable survey.

You can, for example, brood over a matter until you make a mountain out of an ant-hill. Dwelling unduly upon it, you magnify it, and it assumes proportions which do not rightly belong to it. Your logical faculty is set aside, is banished to the background; you are no longer a reasoning being, but one who imagines facts and then acts as though they were real. This is a dangerous thing to do, because you erect a false standard of measurement, and your life gets to be all out of joint. The friendship which has been very dear to you dwindles until it becomes a mere suspicion, and suspicion is no basis on which to build any sweet or lasting relationship.

In the same way one may brood over a physical ailment until the forces of nature all sweep in that direction and it becomes serious. You can think of a pain until it doubles its force and becomes unbearable, whereas in point of fact it amounts to little or nothing; or you may ignore it until it reaches the vanishing point. A man may nurse an injury or a supposed injury until it grows to be the one overwhelming thing in his experience, dominating his whole being and setting his worst passions in motion; or he can curb his imagination, allow reason to come to the front, and reach the conclusion, nine times out of ten, that after all it is an insignificant affair, not worth any particular notice. To nurse a pain or disappointment is spiritually close to a crime, for you not only make yourself miserable, but unfit yourself to bear it as it should be borne.

The Christian rule is to make light of trouble so far as it may be done, and to dwell constantly on the brighter side of life. It is better to be cheerful than gloomy, and if we properly discipline ourselves, we can always find good cheer and nearly always avoid the gloom. Loving your neighbor as yourself means that you should judge him as kindly as you would like to be judged. Keep a check on your tendency to imagine something wrong and search for what is good until you find it. Be slow to condemn, as you

Digitized by Google

certainly will be if you allow your reason to have full play instead of your prejudice.

I am not speaking of a small, but of a very grave duty. There is no religion in doing injustice to any one; neither is there any religion in cherishing a mere prejudice until it warps the judgment. I think of the man Jesus as a perfectly fair being, one who was just even to his enemies. I cannot conceive of him at Bethany, for instance, brooding over the wrongs from which he suffered until, as is the case with us, life seemed hardly worth the living. On the contrary, he actually conquered pain by ignoring it, and had such sweetness of soul that he could cry, "Father, forgive them; for they know not what they do," at a moment when his torture was most terrible. That kind of soul serenity is the ideal to be aimed at. What were sorrow and trial and treachery to one who was led by God and guarded by angels?

I say, therefore, never brood over the ills of life, because you thereby multiply them. Live through to-day and let the morrow take charge of itself. Imagine no evil, and thereby diminish evil. If there is sweetness anywhere, find it as the honey-bee does. Be a friend to the world, do a kindness whenever opportunity offers, be quiet, calm, self-possessed, and self-controlled, and then you will discover the very essence of Christianity.

GEORGE H. HEPWORTH, in *New York Herald.*

Christian Science Question Again.

LIKE Banquo's ghost, the Christian Science question will not down. On the evening of July 13 a meeting was held at the Waldorf-Astoria in New York to consider the preparation of a prohibitive bill to be presented at the next Legislature. We should not have referred to the affair had it not been for the fact that the matter seems to have been taken up quite seriously by several individuals of more or less prominence, both in the medical and legal world. From what we hear, the meeting seems to have resulted in somewhat of a melancholy fiasco. The bill, a rough draft of which was submitted, provides, so far as we have been able to learn, that whoever advises or persuades another against employing medical or surgical aid in case of illness or physical injury shall be guilty of a misdemeanor; and in case the illness or injury results fatally shall be guilty of manslaughter, in case no medical or surgical aid has been received.

The manifest absurdity of a measure similar to the foregoing certainly seems beyond all question. Legislation can only protect the citizen up to a certain point, beyond which each man must look out for himself. The law may recognize the fact that some members of the community—infants, idiots, and sailors, for example—are not as competent as the rest of mankind adequately to safeguard their interests. It cannot, however, go further than the enforcement of a broad, general rule. An individual may habitually disregard his own interests, but unless he comes within certain classes the law will not act as his business guardian. Similarly, an act seems of doubtful expediency drawn to protect an individual from the effects of his own folly in paying attention to improper advice, medical or otherwise.

It may prove to be not without interest in this connection to look at two comparatively recent decisions, one rendered by the Supreme Court of Rhode Island, in State *vs.* Mylod (40 Atl. Rep. 753), the other by the Court of Common Pleas of Ohio, in Evans *vs.* the State. In the first case the Court refused to consider the constitutionality of legislation prohibiting the acts of the defendant, basing its decision on the ground that under the law then in force he could not be convicted of a crime. It therefore took up the question whether the methods of the accused constituted a practice of medicine, and observed: "Prayer for those suffering from disease, or words of encouragement, or the teaching that disease will disappear and physical perfection be attained as a result of prayer, or that humanity will be brought into harmony with God by right thinking and a fixed determination to look on the bright side of life, does not constitute the practice of medicine in the popular sense." The opinion contains a review of many cases cited by the State in support of its contention.

In the Evans case, in which the decision was rendered by Hollister, J., the Court said: "It is clear that Christian Science is a kind of religious belief. Freedom of thought and worship in matters of religion is a birthright of every citizen, and the Legislature cannot take it away or abridge it in any way. It is true that if any practice permitted by any form of religion is against good morals, as, for instance, the polygamy of the Mormons, the people through their agents, the General Assembly, may protect themselves; and it is doubtless also true that similar protection might be had against any practice considered by the majority to be harmful to the public health. But it must be borne in mind that the claims of power to heal by means regarded generally as miraculous is not confined to those professing belief in Christian Science. It is well known that there are many persons in this country not of this peculiar sect who devoutly believe that bodily infirmities may be cured by contact with the bones and relics of deceased persons whose lives were of extraordinary holiness. Can it be that the Legislature had such persons in mind, and intended by this legislation to punish the custodian of such articles if perchance he charged a compensation or accepted a gratuity to be expended in their care and preservation? But if this act applies to one class, it must also apply to the other. Is it not most pertinent to assert that if the Legislature had intended to interfere in matters of religion, even if the case were one most proper for interference, it would have plainly said so, and would not have left its meaning to be made the subject of learned arguments and to be declared by judges with common human feelings and limitations?"

While we have not the slightest sympathy with Christian Science, either in its religious or medical aspect, we are strongly against prohibitive legislation, believing that acts of the kind that are now being constantly proposed by those who are in the habit of advocating legislation as a panacea for all the ills to which the body politic is heir, would fail to accomplish any purpose beyond permitting several members of the sect in question to pose as martyrs before the admiring gaze of their co-religionists.

Physical and Spiritual Salvation.

It is stated that different churches in Kansas City have experienced an appreciable loss of membership through the growth of the several Christian Science organizations in the community. That the doctrine is more or less popular is demonstrated by the congregations which it has drawn together and the construction of at least one fine edifice. Whatever may be believed concerning its reasonableness, it is certain that it appeals to a considerable number of people as a rational and helpful faith.

It is not difficult to find the cause for this condition. "Fear not them which kill the body, but are not able to kill the soul," is a philosophy which has never fully taken possession of the mass of humanity. Even the great Teacher who promulgated that principle, himself shrank

Digitized by Google

from death and the awful torture to which he was subjected by his cruel persecutors. In all ages of the world it has been those who claim power to heal the body who have been sought and followed by mankind. It is true that the world has not lacked the sweet and inspiring example of those who have cheerfully suffered affliction and infirmity through the hope of those compensations which true believers expect to find in Heaven; but the desire for health and long life is not sinful, and its prevalence only goes to prove that the human instinct is, generally speaking, stronger than the spiritual nature.

It will be remembered that while the ministry of Christ opened the way for the emancipation of the soul from sin, it also healed the sick and even raised the dead. There were thousands who followed after him because they had seen him feed the hungry multitude, and it would be impossible to estimate how many of the adherents of Jesus of Nazareth in the days he was on earth were attracted to him by the knowledge that he was able to help the body as well as the soul.

It might well be expected that a faith which assumes the power to subdue disease through the force of Christian belief would appeal to a large number of people, even in this age of the world. This sort of religion touches men and women at the most vital point in their natures. It holds out the promise of freedom from pain, and it goes so far as to point to many realizations of that pledge. Whether all this is fancy or not may be argued out by those who are firm believers in the efficacy of Christian Science and those who see nothing in it but a senseless imposition. But the fact that it professes to lift the body above the reach of suffering and to educate the mind to look upon evil as an unnecessary thing which may be surmounted by a proper exercise of faith, makes it a factor of surprising potentiality in the religious world. Not until society affords a more liberal and cheerful support to ministers of the gospel than to physicians can it be claimed that the world has reached a plane of spirituality where men and women are more concerned about their souls than their bodies. And not until humanity shall undergo a great transformation in the development of a higher spirituality need the world be surprised at the popularity of any religion that promises bodily health as well as salvation for the soul.—*Kansas City Star.*

A Vain Contention.

Before it will be practical or consistent to charge a Christian Science healer whose patient dies under treatment with manslaughter, it will be necessary to show that medical science has discovered an absolute specific for the disease from which death in this instance resulted.

A man of good, sound common sense may, and does, have a decided opinion in the case when a fellow creature suffering from pneumonia dies under Christian Science treatment. At the same time he must see the weakness of the assumption that if this patient had summoned medical science to his assistance he would have recovered. Deaths from pneumonia of patients under medical treatment are of too frequent occurrence to admit this contention.

Portland *Oregonian.*

A Quiet People.

Salem was agitated locally by the announcement of Rev. Magnan of St. Paul's Episcopal Church, that he would deliver a course of sermons against Christian Science. He postponed his first lecture to next Sunday, as he did not wish to make a start on Trinity Sunday. It is to be hoped the reverend gentleman will be given a courteous and patient hearing. We live in a land of toleration and religious liberty, and if people think they can find a better way to live, a surer path to victory over the ills of life and conquest over the weaknesses of the flesh, the true preacher ought to bid them God speed and not evince a desire to hold them back from doing better. The Christian Scientists are a quiet people and are not much in evidence except when prosecuted for practising their religious belief. It is presumed that so long as they pay their bills, obey the laws of the land, and keep the commandments, even Rev. Magnan will treat them magnanimously.

Capitol Journal, Salem, Ore.

Why this Outcry?

As the Christian Scientists point out, here is the injustice in the present campaign against them: Every failure of the Christian Science treatment is exploited as a crime and set forth with great particularity in the newspapers. Yet the regular practitioners of medicine lose patients every day, as the death certificates show, but no outcry is raised over them. If, the Christian Scientists inquire, it is a crime for a Christian Science practitioner to lose a patient why is it not likewise a crime for a licensed physician to lose one? Why all this outcry over an occasional death under Christian Science treatment and no word of comment upon the hundreds of deaths daily under the treatment of regular practitioners? Why make fish of one and flesh of the other? It is going to be mighty hard to answer this argument, the more so as the Christian Scientists have repeatedly challenged the "regular" healers to a test of relative efficiency and the challenge remains unaccepted.—*Chicago Chronicle.*

The Dream of Universal Peace.

THE eyes of the civilized world are upon The Hague today. In that historic city are gathered together representatives of all the civilized nations of the earth, and their talk is all for peace. There are those in this world who declare that universal peace is a dream that will never come true: that universal peace can never be obtained until human nature undergoes a change; that the dawn of universal peace means the dawn of the millennium. No one believes that universal peace can be secured for many years, perhaps hundreds of years, to come; but no close student of human affairs will have the temerity to deny that the tendency of nations is toward peace. War was once universal, and all nations were at war all the time. To-day war is spasmodic, grows less frequent as the years go by, and each succeeding war is shorter and less disastrous in point of human sacrifice. The decisive battle of to-day would have been classed as a mere skirmish in the war of fifty years ago. Human nature may not be changing to any appreciable degree—indeed, we do not believe that it is—but the era of common sense seems to be dawning, and common sense urges us to do away with war if possible. It may take many weary years to entirely do away with war as a means of settling international misunderstandings, but the time when wars "will be no more" is as sure to come as the sun is to rise upon the morrow.

The conference at The Hague is a long step toward the coveted goal. Fifty years ago such a conference would have been impossible, and ten years ago the suggestion of such a conference would have been greeted with laughter and the suggester suspected of being a dreamer. To-day the Peace Conference is an assured fact. Every lover of humanity hopes that the conference will accomplish a great work.—*World-Herald,* Omaha, Neb.

From the Religious Press.

Regarding Mrs. Eddy's Income.

Objection is made to Mrs. Eddy's conduct of the Christian Science movement because she makes a vast income out of it. But probably her income is not larger than that of Mr. Moody. The defence made by her friends is the same as is made by the friends of the great revivalist. The income in both cases is probably ten times that of the most highly paid city minister. The defence is that in both cases the money received is administered as a trust and spent for the benefit of the cause they serve. If the people who give the money know what they are doing, no one else has any right to complain.

Christian Register (Unitarian).

In view of the publicity now given to Mrs. Eddy's large charities, it will not again be charged by fair-minded people that she is a mercenary person. Her charities during the last three years have averaged $88,987 per year. This statement is furnished by her bookkeeper and taken verbatim from her books. With her economical mode of living she could readily be a millionaire, but it gives her more pleasure to do good than to make money. She now seldom gives to beggars, having learned from sad experience the effects thereof. She never gives to be seen of men, but to such persons as she knows to be needy and to such objects as are worthy.

In years past when Mrs. Eddy began to teach Christian Science, she kept a "Christian Scientists' Home"—and her teaching, room, and board were gratuitous. In subsequent years she received into each of her college classes some indigent students, who, after receiving a free course of instruction, went away, earned the money, and sent her their tuition with a letter declaring: "Nothing can pay for what you have taught me." As a rule she returned the money with her thanks. Strange to say it is her charity students, or those she taught with the hope of reforming them, who have sought to hide from the public her real character, and to abuse it.

Extract from "Christian Science History," by SEPTIMUS J. HANNA.

Influence of Christianity.

We say, then, that the Theist of to-day, who lives on the highest plane of thought and practice, is, whether he avow it or not, a Christian Theist. The moral atmosphere he breathes is lit and warmed by Christ as by a sun shining through it. The most vital elements of that atmosphere are Christian. Why should we deny the filiation of our spiritual consciousness? Why kick down the ladder by which we have ascended? Why turn our backs upon the history which has given us our very soul? May we not rather stand with Goethe when, having looked with those wide-open eyes of his for so long upon the world and man, he, in his old age, says to Eckermann: "I bow before him as the manifestation of the Highest Being. . . . Let mental culture go on advancing, let science continually gain in breadth and depth, and the human intellect expand as it may, it will never go beyond the elevation and the moral culture of Christianity as it shines forth in the Gospels. . . . The pure doctrine and love of Christ will make us great and free. We shall advance from a Christianity of words to a Christianity of feeling and action."

Christian World.

Distribution of the Bible.

In its work of the manufacture and distribution of copies of the Holy Scriptures throughout the world, during the latter part of 1898 and the early portion of 1899, the American Bible Society tells an interesting story in its eighty-third annual report, which has just been published. The total issues of copies of the Scriptures at home and in foreign lands by the society during the last year amounted to 1,380,892, of which 780,943 were issued from the Bible House and 599,949 in foreign lands. Of the volumes issued from the Bible House, 119,673 copies were sent to other lands, and, when added to those reported as issued abroad, they make the number 719,622, which represents the foreign circulation of the year. There were given to the chaplains in the United States Navy, 1,250 volumes, and 71,360 volumes to the Army Commission of the Young Men's Christian Association, for the use of the sailors and soldiers in the late war with Spain. Reports of agents of the society in Mexico, Central and South America, and from Europe, Asia, and Africa, show a most satisfactory circulation of the Bible. Especially is this the case in China, where, on every hand, increased interest in the Bible and the Christian religion has been manifested, notably in the palace of the Emperor. In Japan, too, royalty has become interested in the Christian religion, and the Emperor has accepted a copy of the Bible in English from the Bible societies, and a Japanese Bible from his Christian subjects. Since the organization of the American Bible Society, in 1816, its issues of copies of the Holy Scriptures amount to 65,962,505. The expense of carrying on its work for the past year was $370,064.33.—*The Watchman* (Baptist).

Translated Enthusiasms.

"He amounted to so little practically," said a wise man in reluctant criticism of his friend, "because he never translated his enthusiasms into action." Convictions of duty and visions of opportunity are brought to the test in practical application to the uses of common life. It is not merely that the world has little use for enthusiasms which it cannot understand, but that without embodiment in common speech and vital action thoughts are only disembodied ghosts. Action is the great test of all enthusiasm. It reveals and sifts. It brings opinions from the rosy-tinted realm of dreams into the clear noontide of the work-a-day world. There is no disenchantment like the criticism of the indifferent and preoccupied. Yet this very criticism which sifts out worthlessness confirms and increases good. We never know the value of a real enthusiasm until we have translated it into action and seen its working outside our own thought. And by this process also our own character grows strong. It is not merely that what was a theory becomes a working fact and what was a dream a reality; but we also change from dreamers of dreams to doers of deeds, and taking hold of practical life go on from strength to strength.—*Congregationalist.*

Hope not Heresy.

The Universalist *Leader* gives an account of a case in the New Church (Swedenborgian) which is of considerable significance and of general interest. The Rev. Albert Bjorck, who has charge of a mission church in Sweden, has been charged with teaching Universalist doctrine, and has come to this country to explain his position to the trustees of the mission fund. His explanation, which has proved so satisfactory that he is to return to his work, is thus interpreted by the Rev. John Worcester, a recognized leader in the New Church:—

"The view he holds is not a firm belief. It rests upon a sentiment—a generous hope. It is slightly confirmed. he knows that the grounds of confirmation are necessarily slight, and he holds his view with an open mind; thinking himself that very likely presently he will change his view again. He has no desire to propagate. But, with an

Digitized by Google

open sensitiveness on the point of frankness, what most people would have quietly kept in their hearts as a hope, he thought it was not honest to keep there; he thought it was only frank to publish to the world all that he was thinking and that was in his heart. I think he was very unwise in doing this. I think that he gave to the matter an importance that it did not deserve."

The New Church by this action discriminates between the "larger hope" and Universalism. Universalism affirms as a dogmatic article of faith the final salvation of all men. The old orthodoxy affirmed as a dogmatic article of faith the final perdition of some men. The "larger hope" does neither. It is agnostic upon this question, with a generous hope that eventually the resources of God's grace will find a way to save even the most persistent from their own self-ruin. This is neither Universalism nor the old orthodoxy; and the New Church has done wisely in recognizing the fact and in allowing within its borders room for a phase of thought and life which was not known in either the Liberal or the Orthodox wing when the New Church was organized. That this "larger hope" ought to be allowed in the Evangelical Churches should be recognized by all who believe that hope, not fear, is the basis of the Gospel.—*Outlook*.

My Lesson.

BY GRACE ST. L. PRESCOTT.

For now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known.
PAUL.

AN experience of more than a year ago comes to me which, taken as an object-lesson, may help some brother or sister Scientist as it has helped me.

Our windows needed washing. In order to accomplish as much work as possible in a short space of time, I offered to help the servant, telling her that I would work on the inside of the windows while she worked on the outside, a plan which could be easily carried out, as the windows were on the ground floor.

We began our work accordingly. I washed my side of the first window, as I supposed, clean; and I presume the girl thought she had done the same. Peering through the glass to see if our work was well done, I noticed some spots on the window which I thought were on the outside. Tapping on the window-pane and calling the girl's attention to these places, I said, "Those are on the outside; see if you can get them off." She worked for a second, giving a few vigorous rubs, and finding that this did not remove them, said, "I think they must be on the inside." Again I looked, and, still sure that these places were on the outside, I thought the only way to prove to the girl and show her that they were *not* on my side, was to rub as vigorously as she had done. This I did, but to my surprise, and I may say mortification, I found these tenacious spots had yielded to my own efforts and therefore must have been on the *inside*. A second window and a similar experience, though more cautious this time in my assertion that these spots *were* on the outside. A third window, and I had begun to learn my lesson. A more thorough work on my own part and less attention to the girl resulted in well-washed windows.

On finishing our work, I found myself in a thoughtful mood. A lesson in regard to the more important things of life than material window-washing, had come to me, and these questions silently but powerfully presented themselves: Is it possible that in looking through my window of human consciousness, the faults I see in others are on the inside of the glass? Is it possible that I can look through my window in such a way as not to know whether the spot is within or without? These questions, and the lesson I had had, made me begin to examine my window more carefully, and, in meekness, I have to confess I found some dark places on the pane which looked as if they *might* be on the inside. What had seemed to me before to be heedlessness or stupidity on the *outside*, now looked like impatience on the *inside*. That which had before seemed to be thoughtlessness without, now looked like self within. It is not necessary perhaps for me to tell just how much work I found to do, suffice it to say, that whereas I had never washed many windows before, it now seemed as if it were my chief employment.

Quite recently the above experience has come forcibly to my thought, and again it brings its lesson. In Christian Science we are all trying to follow the command of the Great Teacher: "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and there is not one earnest Christian Scientist who would not be glad to work harder to clean his side of the window if he knew the work was his to do. The trouble is we are not conscious of the spot being on the inside.

We come into Christian Science with many qualities of the human mind which are the result of education or early training. Much of what has before been thought good and commendable in human character, now appears as foolish, frivolous, or deep-rooted error. Ambition and pride have been a part of this education; yet are they not the spots that must be wiped off our windows before the dust of mortal mind accumulates, and they grow to spots of envy and jealousy? We, as Christian Scientists, are trying to reflect the Christ-Truth which heals the sick and the sinning. The way to do this is clearly shown us in Science and Health; and in gratitude to our dear Leader, through whose teaching we have received more health, more happiness, and more holiness, let us be more willing than ever before to peer through the window at every angle and wipe off with Truth and Love even the tiniest spot.

Prison Work.

IN November, 1897, I visited the county jail in Scranton, Pa., for the purpose of introducing Christian Science literature among the prisoners, and, if conditions were favorable, to do systematic work among them. A copy of the *Journal* was left with one prisoner and a short talk on the subject of Christian Science was listened to most respectfully. A visit the following week found another, who had read the *Journal*, interested and anxious to talk. He asked eagerly for another *Journal* and it was given him.

Feeling keenly my inability to meet the great need of these sin-stricken ones without divine help, I constantly turned to God for guidance and light. The words of the Mother's beautiful hymn, "Shepherd show me how to go," became my daily companions, giving me much strength and comfort, for I felt so plainly the necessity of binding "the stubborn will" in myself as well as others in order to do God's work aright.

I did not distribute the literature generally, but tried to let Truth work in its own way, and it was most encouraging to watch the growing interest, as one after another would ask to see me, or for something to read. For a long time previous the W. C. T. U. had been doing missionary work at the prison, and regularly each week religious papers and magazines were distributed by them and almost as regularly destroyed or thrown carelessly about the cells, very little of it seemingly being read. Not so with the Christian Science literature. This was read and re-read, calling forth favorable comments. Excellent care was taken of it; very little being soiled or marred, and almost none destroyed.

Digitized by Google

One man who was serving a second term, the offence being the same in each instance,—namely, dishonest business methods,—at first scoffed at the ideas advanced by Christian Science and religion in general, saying he had looked in vain to see a practical Christianity, and finally had come to incline strongly to the views of Robert Ingersoll. However, noticing the effect of Truth upon some hard drinkers, he became convinced that here was something different from what he had known before. He began to read Science and Health, and soon caught a glimpse of the beautiful Truth it revealed. In a very short time he was able to demonstrate over claims for himself, and, best of all, to manifest love for the keepers and others, and has since proved his faith by his works.

Another, who had become an abandoned inebriate, and for four years had not provided a home for his wife, upon his release was successful in obtaining employment the second day, and soon had a few rooms comfortably furnished which they could call home. Both he and his wife attend our services.

The greatest respect and courtesy has been shown by all the prison officials, and many privileges voluntarily extended which are not ordinarily allowed. Also they did not hesitate to express their approval of Christian Science methods, and freely stated that in their opinion it was the only thing which had ever accomplished any good in the county jail. Many of the prisoners have become interested and much good seed sown. I have received letters from some who afterward left the city, and they all declare their intention to adhere to the teachings of Science and Health.

I feel very grateful to God and to our Mother and Leader for making it possible for these needy ones to be helped. Divine Love will meet their every need and gently and surely guide them into the understanding of Truth, and its demonstration.

R. E. WATRES, Scranton, Pa.

The Importance of Faithfulness.

BY N. S.

EVERY true Christian Scientist knows something of the truth of the saying "Eternal vigilance is the price of liberty."

After being made free through the Truth from a terrible fear that followed me night and day, I took a course of study in one of the last classes taught by Mrs. Eddy in Boston.

After months of faithful effort, with alternate success and failure, but still with a few remarkable demonstrations of Truth, I felt obliged, from a financial point of view, to return to my former occupation of teaching, for my home was in a sparsely settled district where opportunities for demonstration were few.

My school soon became an all-absorbing theme with me, and I gave a little less time each day to Science and Health, and a little more to intellectual improvement, until finally I became more imbued with the thought of making my school the "first in town" than of keeping undimmed the light of Truth in my thought.

Among my pupils were my sister's children, two dear little girls, whom I had unconsciously made my idols, for they were my constant companions in school and at home, and my life drifted on, a blissful dream, for ten years. But the awakening came, and I was unprepared to meet the error that confronted me.

The elder child, grown to be a beautiful and promising young lady, passed on from our sense of life and left me overwhelmed with grief and remorse.

In this Gethsemane of woe I began to learn the paramount necessity of being faithful to the lessons of Truth we have been taught, and the wisdom of the Mother's admonition to "keep our lamps trimmed and burning."

From the depths of a chastened heart I *feel* the truth of the words she has felt even more deeply: "Sorrow . . . never leaves us where it found us. The furnace separates the gold from the dross, that the precious metal may be graven with the image of God" (Science and Health, p. 276).

With bleeding feet and a sore heart I have turned my steps once more into the only path that leads to peace, and my efforts have been rewarded by several most beautiful demonstrations of omnipresent Love, reminding me often of these words of Jesus: "And I, if I be lifted up from the earth, will draw all men unto me."

During the illness of my niece she received great spiritual light and help through a sister Scientist, and I was comforted in a remarkable degree by her help, which I shall never forget.

I have had several pleasant talks with ministers upon the subject of Christian Science, and in each case they seemed kindly disposed to listen, and I am striving each day to make my own thought a more perfect transparency for Truth, and to listen only to the voice of God.

Through the baptism of suffering I have learned some of the most beautiful lessons of my life, and one is this: "It is good for me that I have been afflicted: that I might learn thy statutes," for "Before I was afflicted I went astray: but now have I kept thy word."

Rev. Mary Baker G. Eddy Defended by an Outsider.

At the Chautauqua Assembly which met at Winfield, Kan., this summer, Miss Pauline Lewelling was assigned the subject of "The Five Most Famous Women of America." She chose the name of Mary Baker G. Eddy as one of them. She is not a Christian Scientist, and so stated, but said she hoped there was no one there so prejudiced as to refuse to see the beauty in the character and life of Rev. Mary Baker G. Eddy. She sketched her useful life, giving several incidents to illustrate particular points. She spoke of the miraculous growth of her church, denied some charges often brought against her, read the tenets of the church, and challenged any one to deny what she had claimed, that Mrs. Eddy is, and rightly so, one of the most prominent women in America to-day.

"A city that is set on a hill cannot be hid." While there are multitudes who have not yet entered the City, yet they have seen its beauty from the valley. V. B.

Just Acknowledgment.

A prominent member of the Congregational Church and a leader in temperance work in the place in which she lives, writes thus, a few weeks after receiving the pamphlet entitled, "Christian Science History."

"I have changed my mind about Mrs. Eddy. I think she is *very* unjustly treated by so-called Christians. I look upon her as one of the greatest of the world's benefactors, and I thank God it is *a woman* that has accomplished so much for suffering humanity.

E. E. WILLIAMS, Chelsea, Mass.

The Church in the White Mountains.

The little church in the White Mountains which was dedicated last summer held its first Wednesday evening meeting August 9, with an attendance of forty-one, representing at least half as many states. There were many interesting testimonies given, the time being fully occupied.

At the Sunday service August 13, there was an attendance of ninety. At the close of the meeting a stranger testified that he was completely healed of rheumatism while listening to the service. EMILE ROUNSEVEL.

A Church Home at Ottumwa, Iowa.

The members of First Church of Christ, Scientist, have recently purchased a church home. The property formerly belonged to the Episcopalians and was known as St. Mary's Episcopal Church. It is situated on the corner of Fourth and Market Streets, and is a most desirable site for a large church.

The present structure is a pretty little brick one, gothic in design, and will seat about four hundred.

ELLA A. TELFER, Clerk.

Poets, Preachers, and Sages.

In the most fallen and depraved man, he [Jesus] saw a being who might become an angel of light. Still more, he felt that there was nothing in himself to which men might not ascend. His own lofty consciousness did not sever him from the multitude; for he saw in his own greatness the model of what men might become.

CHANNING.

Of course I do not believe in a devil, eternal torment, nor in a particle of absolute evil in God's world or in God.

THEODORE PARKER.

The highest and most profitable lesson is the true knowledge and lowly esteem of ourselves. It is great wisdom and perfection to think always well and highly of others. If thou shouldst see another openly sin, or commit some heinous offence, yet oughtest thou not to think the better of thyself; for thou knowest not how long thou shalt be able to stand. THOMAS A KEMPIS.

The less a man thinks or knows about his virtues, the better we like him. EMERSON.

No man can ever go forward to a higher belief until he is true to the faith which he already holds. Be the noblest man that your present faith, poor and weak and imperfect as it is, can make you to be. Live up to your present growth, your present faith. So, and so only, as you take the next straight step forward, as you stand strong where you are now, so only can you think the curtain will draw back and there will be revealed to you what lies beyond. PHILLIPS BROOKS.

That best portion of a good man's life,—
His little, nameless, unremembered acts
Of kindness and of love.

WORDSWORTH.

Good temper, like a sunny day, sheds a brightness over everything. It is the sweetness of toil and the soother of disquietude. WASHINGTON IRVING.

Teach me, then
To harmonize the discord of my life
And stop the painful jangle of these wires.
That is a task impossible, until
You tune your heartstrings to a higher key
Than earthly melodies.

LONGFELLOW.

It is much easier to be critical than to be correct.

DISRAELI.

Miscellany.

When the Queen Wears a Crown.

Her Majesty, Queen Victoria, has three crowns, but it is very seldom indeed that she wears one of them. During the long series of functions that accompanied the celebration of her last birthday, for instance, there was only one occasion on which the royal head was graced with a crown. This was the drawing-room which Her Majesty attended. The tiara which the Queen then wore was made nearly forty years ago, and weighs about eight troy ounces. It is a light shell of gold, thickly encrusted with diamonds, there being no less than 2,673 white diamonds and 523 rose brilliants. This was designed for use with the long strip of tulle used as a veil by Her Majesty on State occasions, such as weddings and drawing-rooms. The Queen wears it well back on her head, and it forms a pin to fasten the ceremonial veil, which floats away from it to the hem of the train.

The gold circlet was the successor to the circlet of gold which may be seen in the earlier pictures of the Queen. The jewels in this are very beautiful, being choice diamonds matching perfectly in color. The general effect of the crown is shown in some of the coinage, although the veil was not worn until after the later tiara was adopted. This diadem, and another of similar shape that preceded it, were used when Her Majesty opened and prorogued Parliament. It was also worn during the ceremonies attending the wedding of the princess royal (now the Empress Frederick).

On every occasion on which the Queen visited the House of Lords the State crown was taken out of the regalia-room in the Tower of London and was borne before Her Majesty on a cushion. Except for this purpose the crown has only left the Tower twice during her reign—once for repair, some part of the setting having become loosened, and once in order to modify the ermine. The queen has never actually worn the State crown since it was placed on her head at her coronation. The crown was made over a century ago, and is kept in the careful custody of the Tower. It includes 2,783 diamonds, 277 pearls, sixteen sapphires, eleven emeralds, and four rubies. M. A. P.

Boston Evening Transcript.

Fearsome Medicaments.

The advisability of physicians' prescriptions being couched in Latin, says the London *Mail*, has frequently been questioned, but in many cases medicines of the highest value would be refused by the delicate patient if once their composition was known.

Many a patient, for instance, would probably gasp at his doctor prescribing to him dynamite as a remedy in heart disease.

Dynamite is simply porous clay saturated with our most terrible explosive, nitro-glycerine, and this same nitro-glycerine is an officinal medicine of the Pharmacopœia, and is freely prescribed in cases of angina pectoris, and even for seasickness. It is taken internally in lozenges of chocolate.

Pure venom of the rattlesnake is being used by eminent practitioners in severe cases of scarlet fever. Dried bullock's blood mixed with glycerine and brandy or simply powdered is one of the latest additions to the physician's armament.

The following prescription would probably be accepted by most of us in most blissful innocence.

RECIPE.

Blattae Orientalis, drach. xii. Div. in pulveres cxliv. Capiat unam ter in die.

Now for our translation:—

Digitized by Google

Take thou of crushed cockroaches twelve drachms. Divide in 144 powders. Take one three times a day.

Will it be believed that the above prescription is other than a relic of old-time quackery? Well, it is a fact that it is being now used in this present year of grace, and has only been introduced during the past few years. A favorite remedy for coughs is a syrup composed of powdered dried fox's lungs, with a little licorice and aniseseed, etc.

The most effective of tonics, and vastly used, is strychnia. Stropanthus, introduced from Central Africa some few years ago, and now recognized as our most potent heart sedative, is the deadly arrow poison of the African cannibals.—*Philadelphia Record.*

A Traveling United States Court.

The United States court of the northern district of the Indian Territory is probably the only traveling court, including the court-room and all things and persons connected, in existence in the United States. United States Commissioner Harry Jennings, United States Marshal L. E. Bennett and a corps of assistants have adopted this novel plan of traveling over the district and holding court at several different places instead of at one place in the district, as heretofore. The northern district of the Indian Territory is large, and the towns are far apart, so that it is very hard for persons to travel to and from to attend court, as well as expensive. Commissioner Jennings has had a small house built on wheels, much resembling a mover's outfit, in which they travel, and also in which they hold court in the various towns over the district. They carry cooking utensils with them and have an expert cook, who prepares their meals, and also a servant who keeps their house in order. They go from place to place, wherever they are wanted, and they claim that they have saved the people considerable money, as it is much less expensive for the court to travel than for the people to travel in that country. Criminals can be reached more conveniently in this manner, as it is often dangerous to conduct criminals from town to town without a heavy guard, as their allies may attempt to rescue them. The traveling court of the Indian Territory is a success, and the people of that district are well pleased with it.

Boston Evening Transcript.

Medicine on "Lines of Business."

In reply to a request of the *Journal* to state in brief the object of the proposed organization of medical men, and also to give his opinion of the present status of medical ethics, Dr. C. C. Cone replies as follows:—

"It is to foster a more fraternal spirit among the profession of whatever pathy or ism in rapport with the growing demands of the times.

"The practice of medicine is, and probably always will be, an unperfected science and should be established on lines of business and not on mysticism and tradition. It is now no longer considered a priesthood, cowled in cap and gown and accepting whatever an unappreciative public may see fit to bestow, but a business, and to be successful must be conducted along business lines as any other calling.

"Leaving out the principle of doing to others as you would be done by, the code of medical ethics is naught but a dead letter, and is most flagrantly violated by its most ardent supporters, and the violations are further enhanced by the many petty jealousies existing in our ranks.

"The Constitution of the United States has been amended and with advantage, why not revise the old, hoary-headed code of medical ethics?"

Journal, Oskaloosa, Ia.

How Long Does it Take to Think?

Professor Richet says that it takes a man about one-eleventh of a second to think out each note of a musical scale. He explains the practice that people will often follow of bending their heads in order to catch each minute sound by the fact that the smallest intervals of sound can be much better distinguished with one ear than with both. Thus the separateness of the clicks of a revolving toothed wheel were noted by one observer when they did not exceed sixty to the second, but using both ears he could not distinguish them when they occurred oftener than fifteen times a second. The sharp sound of the electric spark from an induction coil was distinguished with one ear when the rate was as high as five hundred to the second.

The sight is much less keen. When revolved at a speed no faster than twenty-four times a second, a disc, half white and half black, will appear gray. We also hear more rapidly than we can count. If a clock-clicking movement runs quicker than ten to the second, we can count four clicks, while with twenty to the second we can count only two of them.—*St. Louis Globe-Democrat.*

Long Reigns.

Louis XIV., king of France, ascended the throne on the 14th of May, 1643, and occupied it till his death on the 1st of September, 1715, a period of seventy-two years and one hundred and ten days. He was succeeded by his great-grandson, who became Louis XV. and reigned for nearly fifty-nine years, these two successive reigns amounting in the aggregate to one hundred and thirty-one years, which is another record.

If ancient records are to be believed, King Pepy II. of Egypt enjoyed a reign extending over the extraordinary period of ninety-four years.—*Concord Monitor.*

Convenient Names.

Patient. "I say, doctor, just what is this 'grip' anyway?"

Doctor. "Why, my good fellow, that's the name we doctors have for everything nowadays but appendicitis."

Patient. "Ah! And what is appendicitis?"

Doctor. "Why, that's the name we have for everything but the grip."—*Judge.*

Die a Natural Death.

English Tourist (in the far north, miles from anywhere)—"Do you mean to say that you and your family live here all the winter? Why, what do you do when any of you are ill? You can never get a doctor!"

Scotch Shepherd—"Nae sir. We've just to dee a natural death."—*Punch.*

An Immune.

"Johnny, are your people going to take you with them on that trip across the ocean?" "Yes'm." "Aren't you afraid?" "No'm. Ain't afraid of nothin'. I've been vaccinated and baptized."—*Healthy Home.*

Follows the Medical Profession.

"My son follows the medical profession."

"Where did he study medicine?"

"Oh, he isn't a doctor. He's an undertaker."

Yale Record.

Health to a doctor once applied;
He gave her physic, and she died.

The Practical Age.

Questions and Answers.

Is it true that Christian Science teaches that man is God? I have heard it so charged, but Science and Health makes it very clear to me that God is the only *Supreme Being. If that is so, man cannot be God unless man also is a supreme being, and this would make a universe of supreme beings—a doctrine more pagan than the heathen idea of many gods.*—P. S. T., an inquirer.

Our inquirer has both asked and answered his question. "Science and Health with Key to the Scriptures," from beginning to end, does teach the supremacy of God as the one universal Mind that created and controls the universe. He is the one Power, the only Substance, the only Life, Truth, and Love. Could there be a stronger definition of God's supremacy?

In answer to the question, "Does Christian Science teach that man is equal with God?" the Rev. Mary Baker Eddy, in *Christian Science Series,* No. 1, May 1, 1889,—then being published—thus writes:—

"I see no indication in the premises or proof of Christian Science for such a conclusion. Man is not equal with his Maker; that which is formed is not cause, but effect, and has no power underived from its Creator. But it is possible, and man's duty, to throw the weight of his thoughts and acts on the side of right and Truth; thus, he is found in the scale with his Creator,—not weighing equally with Him, but growing into that altitude of mind which was also in Christ Jesus, and comprehending in divine Science every footstep toward the recognition of what the apostle meant, when saying: 'The Spirit itself beareth witness with our spirit, that we are the children of God; and if children, then heirs; heirs of God, and joint heirs with Christ.' In Science, man represents his divine Principle,—the Life and Love that are God,—even as the idea of sound in tones represents harmony. But mortals have not yet arrived, in their understanding of the Science of Being, where man is perfect, even as the Father, his divine Principle, is perfect."

❧

In the Sentinel of August 3, 1899, you say, "There is no question as to the present status of the individual who was known to the world as Robert G. Ingersoll, any more than as to that of any other of God's ideas or children."

Are we to understand by this, that all men enter at once into the same state of enjoyment after death, whether they have been infidels, blasphemers, or consecrated Christians?

A. F. P.

When Christian Science maintains that man is God's image and likeness it refers to generic man. Generic man, of course, includes the individual, male and female.

The true man, or spiritual man, is not the man of sin, sorrow, and sickness. Immortal man is the spiritual; mortal man is the sinful or material. As the "old man" of sin—as St. Paul called it—is "put off"—that is, as sin is overcome and destroyed—the mortal man disappears and the new man—the immortal—appears. The true, or immortal man, reflects Good; the false, or mortal man, reflects evil.

The change called death does not affect the status of the person passing through it in the sense that he is any less sinful after the change than before. To the extent that he is not awakened from his false estate of sin—that is reformed—in this state of existence he must, and sooner or later will, be so awakened—reformed—in a future state.

One's salvation must be worked out "with fear and trembling" before consciousness of one's true spiritual estate is attained. Christian Science does not hold that this can only be done during that so-called probationary period between mortal birth and mortal death, or "between the cradle and the grave," but that the period of probation is co-equal with God's mercy, and Scripture repeatedly assures us that "His mercy endureth forever."

In this connection read carefully pages 186 and 187 of "Science and Health with Key to the Scriptures."

Baltimore People Healed.

THE Second Church of Christ, Scientist, of this city, which meets twice each week in the Lyceum Parlors, devotes its Wednesday night meetings to the hearing of testimony and statements of experience by members and other attendants who have personal knowledge of the church's success in the healing of mental, moral, and physical diseases.

Last night about a dozen believers told of the benefits which they themselves or those under their daily observation have obtained by the application of the Christian Science mode of combating disease. The speakers were of both sexes and of various ages and conditions of life.

A boy, apparently about fourteen years of age, told of a cure which he had wrought upon himself a few hours before the meeting, and an elderly lady—a member of a well-known Baltimore family—told of the success of the Science treatment, as practised by herself and members of her household.

One of the most remarkable histories of a successful cure was given by a gentleman very prominent in the church in this city.

It Cured Neuralgia.

"From birth," he said, "I was afflicted with an impediment in my speech, which made it impossible for me to speak in an intelligible manner. I placed myself under the care of doctors and specialists innumerable, but none was able to give me even temporary relief. Several years ago the muscles of my eyes were paralyzed, and I became practically blind. For the cure of this also I sought the best medical advice attainable, but all to no purpose, for my condition became gradually worse and worse.

"After being under treatment for a long while I was seized with an attack of neuralgia of the eyeball, and at one time, for seven days and seven nights, I lay helpless in the terrible agony of this disease. The doctors attempted to allay my sufferings by the use of morphine, but the drug seemed to have little power to give me relief, and hypodermic injection after injection failed to ease my agony. At last I left the hospital without hope of ever being cured and went to live in the country, where, it was hoped, I might find some temporary benefit. While there a lady residing near by was told of my case, and she, being a Christian Scientist, visited me and proposed that I allow her to attempt the cure of my malady by the methods of her church. I consented, though with little hope that her attempt would be successful.

"One week after she took charge of my case I laid aside my spectacles, and since then I have never had occasion to use them. Naturally I immediately became very much interested in Christian Science, and soon cured the impediment in my speech without assistance from any one. To-day I am a well man, free from all disease and illness whatsoever, and during the last few years I have been able to heal many others.

A Mother's Testimony.

"Recently I healed a young man who was suffering intensely with an acute attack of pleuro-pneumonia without even seeing him until his cure was effected. He is here to-night, and he, his mother, and his father are willing to give testimony to the truth of all that I claim."

Digitized by Google

The mother of the young man in question said to a *Herald* reporter that her son was actually cured, as stated, and that she herself received relief through Christian Science after suffering for twenty-five years with a very painful disease of the spine.

"About two years ago," she said, "the method of healing practised by the Christian Scientists was brought to my attention, and in a short while I was completely and, I believe, permanently, cured by their treatment."

Another lady told of the almost miraculous healing of herself and her five-year-old child.

"For seven years," she said, "nervous dyspepsia made of me an invalid. After being under the care of six doctors without finding relief, I determined to try Christian Science, but in a little while dropped it and went back to old methods. I visited specialist after specialist, but none seemed to be able even to allay my sufferings temporarily, and, taking hope once more, I resumed treatment with the Scientists. In two weeks I was perfectly well.

"My child was terribly deformed by tuberculosis of the hip joint, a malady commonly known as hip disease. The method of treatment adopted by the old-school doctors whom we employed was exceedingly painful, and for thirteen weeks the child lay in the hospital. It was said that an operation would be necessary, but that the patient's condition would not then warrant its being performed. About two years ago we consulted a Christian Science healer, and two weeks after the beginning of her treatment the little sufferer laid aside braces, thick-soled shoes, and crutches. In three months the child's shoulders, one of which had been three and a half inches lower than the other, were normal, and since then there has been no noticeable deformity."

A young lady described the method and results of the treatment adopted for a cure of nervous prostration and frequent hemorrhages which made her unable to leave her bed.

When Specialists Failed.

"I consulted the leading specialists of Philadelphia," she said, "and all told me that my only hope, and that a slim one, was to be found in a surgical operation. In despair I went home and waited for death to end my sufferings. One day, however, I was induced to allow a trial of Christian Science, and to it I owe my life. After one treatment I was able to sit up, on the fourth day I left my bed and walked about the house, and a week after I was well enough to go out.

"In my own family I have seen a bad case of astigmatism cured in a remarkably short time. Asthma of twenty-five years' standing has likewise been healed."

Other speakers told of the cure of various diseases—among them appendicitis, malaria, sick headache, various deformities of the bones and joints, and many varieties of organic trouble. One lady testified that she had been almost immediately healed after severely cutting her finger with a piece of broken glass, and another recounted a similar experience with a jagged wound produced by a broken meat tin.

The attendance at the meeting was good and the audience listened very attentively to the words of the speakers. Miss Ellen E. Cross is First Reader of the church, and Hermann S. Hering is Second Reader.

Baltimore Herald.

The *Morning Star* says: "The truth does not always, at first, appear; but when at length it gets out, the many voices of error are silent. 'The frogs cease croaking,' said Richter, 'when a light is placed on the banks of the pond.'"

Awake, Mortal Dreamer.

BY BERT POOLE.

PROUD, mortal man, that thinkest art awake,
But still in sleep art dreaming daily on;
Nor mov'st thyself to holy treasures take,
Nor bid'st mesmeric slumber to be gone,

Thou dost profess to be a god of life,
And goest forth to deeds in sight of all;
With sweat of face thou pantest in the strife,
Not knowing that thy pride must have a fall.

One touch of Love Divine would waken thee,
But oft as Angel finger seeks to place
His mystic touch to set thy spirit free,
As oft is beaten back from off thy face.

Wilt thou be whole? Thou often sayest "yes,"
But in thy dream of self, dost not allow
The soothing cup of cheer to closely press
Thy lips, nor LOVE to smooth thy troubled brow.

But thou art not a god and cannot be;
For only One is Good—the Perfect Mind.
Let not false sense continue claiming thee,
But know in Truth, perfection thou wilt find.

Notices.

Beginning with September, 1899, the rates for the *Sentinel* will be as follows:—

SUBSCRIPTION PRICE.

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

The eleventh edition of the Church Manual is now on sale. The list of members to date is published separately in pamphlet form. A copy of this list is furnished with each Manual. The list will not be sold separately. The price of the Manual including list of members, will be one dollar as usual. Send orders to The Christian Science Publishing Society, 95 Falmouth St., Boston, Mass.

Applications for membership with the Mother Church to be presented at the semi-annual meeting of the First Members to be held Tuesday, November 7, 1899, must be in the hands of the Clerk of the Church on or before the 15th day of October. WILLIAM B. JOHNSON, Clerk.

Per Capita Taxes and contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated Poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid. . . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen; all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHER'S THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, $2.50.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; $2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU I SAY UNTO ALL, *WATCH.*"—*Jesus.*

Published Weekly at 95 Falmouth Street. BOSTON, MASS., AUGUST 31, 1899. **Vol. 1 No. 53**

President McKinley and his Views.

[From *Harper's Weekly.*]

I HAVE had an interesting talk with the President, and I shall set down, without comment or suggestion of opinion, and I trust in perfect fairness, my impressions of him, and of his opinions and purposes concerning the things political which are most interesting to the country. It may be that, in a measure, I shall anticipate his next annual message to Congress, but four months will elapse between now and the time when he must send that document to the legislative branch of the government, and many events may happen which will make the message that would be written to-day entirely different from that which will be written then.

✤

In the first place, let us consider Mr. McKinley. He has been talked about a good deal, but he has been carefully considered very little; not enough, perhaps, by those who oppose his views, and who would be better prepared for their conflict with him if they would reflect that he is a typical American from a typical American community.

Mr. McKinley is an opportunist and he is an optimist. He wants to govern the country in the way the majority want it governed, and he generally believes that the majority is not only right, but has a right to its own way. This often makes him an opportunist. He is an optimist also, and believes that the institutions of the United States are the best that human wisdom has ever framed. He is one of a large number of his fellow-countrymen who are thoroughly convinced that American rule brings happiness and prosperity to all who have the privilege of enjoying it. He also believes that material prosperity is the outward sign of inward happiness and of sound politics, and he is inclined to push American prosperity to the farthest possible bounds, endeavoring to extend it abroad and to increase it at home. He believes that the greater the prosperity, the wider the opportunities and the richer the blessings to the masses.

Mr. McKinley does not consult public opinion for the purpose of absolutely guiding his conduct by what he hears. He wants to know what the country desires, but he could not change his nature to satisfy any voices that might come to him, and he is too wise to try. They might modify his policy; they would not revolutionize it. It seems to me that his opponents are guilty of a great blunder in assuming that the President takes his policy wholly from the voices which come to him. If he did that, he would be oftener in a panic than has been the case, if ever, since the war with Spain broke out.

Mr. McKinley has a policy, and he does his best to impress it upon the leaders of his party and upon Congress. That is the main point; and the only thing really worthy of consideration in ranging ourselves on one side or the other of the prevailing issues is the merit of the issues. Now it happens that Mr. McKinley is so constituted by nature, and by that environment of the Middle West, which is the nursery of optimists, that he is in favor of any policy, any course of action, that, in his opinion, will make America bigger, better, and richer. He believes that protective tariffs have increased the wealth of the country, and that the territory which in his opinion has come to us by the fortunes of war will be profitable to us in the uses of peace. You may call it exuberance, or fatalism, or riotous imagination, or fantasy, what you will, the mental characteristics of Mr. McKinley are confidence in his intuitions, and a firm faith that whatever America does deliberately is likely to be right, and there are so many Americans like him, especially in that part of the country whence he comes, that I have called him a typical American, and his community a typical American community.

Feeling the certainty that I do as to Mr. McKinley's mental characteristics and the trend of his sentiments and his sympathies, I am sure of the conclusions that I have drawn as to his opinions on the subjects which are of most importance to the country.

✤

The Philippines naturally present themselves first. The President is convinced that only a part of the Philippine people are in revolt; in fact, that the Tagals alone are doing the fighting. He intends to put down this insurrection and to put it down speedily and with much convincing energy —in time, I fancy, to permit Senator Burrows to vote for him for President next year. This much has been hinted at and openly said in the news of the day, but I repeat it because the President expressed his confidence with so much vigor that I am inclined to believe that he is well assured that the wretched war is near its end. The war over, the question naturally is as to the future, and our own future relations with the islands, our attitude towards them, and the character of our control over them. Coupling what the President said to me with his characteristics, which I have briefly set forth, I conclude—a safe conclusion, I think—that the President believes that we shall keep the islands, Congress, of course, being the determining factor. This, to him, is the inevitable outcome of the situation. He does not conceive it possible that we should go away, and I do not believe that he wants us to go away. He thinks that we should be thereby not only abandoning our responsibilities, but that our action would be a confession of weakness, which would make us an object of derision among Europeans, and would assure the Oriental peoples that we are a nation quite unworthy of their

Copyrighted, 1899, by Mary Baker G. Eddy.

Digitized by Google

serious consideration. The President doubtless believes that retention of the Philippines will make for the best interests of the natives and for the welfare of American commerce; and that what makes for these will make for the political health of the nation. In this belief he thinks he is seconded by the majority of the people.

✙

As to Cuba. This is the subject second in interest. The President recognizes the necessity of beginning very soon to give to the Cubans the government of their own island. There is no intention, however, of making a sudden change, of calling a constitutional convention for the purpose of arranging at once a general scheme of government for the island. The movement will probably begin in cities like Santiago and Matanzas, where municipal governments, resting upon the suffrage of the citizens, will be increased as the experiment justifies itself, until all the cities are included. A census is now being taken as a preliminary step to giving the islanders a government. Side by side with this process of establishing municipal self-government, an experiment in public schools will be made. General Wood has a plan of his own for the beginning of a free school system, which he is soon to put into operation in Santiago. After the local governments have been established and sufficiently tried, there will be an enlargement or extension of the political functions of the Cubans. Perhaps they will be charged with the task of establishing governments for the provinces, and at last for the island. Perhaps the experiments in municipal administration will justify the government in turning over the whole island to its people without the preliminary intervention of provincial rule. At any rate, the idea is that the new government shall develop from the bottom to the top, and shall not be turned out ready-made by a constitutional convention. It is the confident belief of the Administration that Congress is solely responsible for the government of all our new possessions.

✙

The establishment of a government for Porto Rico presents another problem. The people of the island have already local self-government as far as practicable, but no plan is likely to be reached until General Davis, in whom the President justly reposes great confidence, makes his report. He will do this after careful observation and study of the people and conditions of Porto Rico.

I have left small space for an interpretation of the President's views on domestic questions. Briefly, he expects, of course, that no change will be made in the principle of our tariff policy, but there is no doubt that he believes that high-water mark in duties has been reached, and that changes will be in the other direction, although they will be slight, and will be made only when the advocates of protection themselves regard them as helpful. The internal revenue taxes are doubtless here for good. They may be slightly modified, but the taxes are necessary, because revenue from the tariff, high as it has become, will not support the government. The tariff itself now makes the internal tax necessary. Its adoption was becoming urgent before the war, but the war enabled Congress to do what no party would have taken the responsibility of doing under ordinary conditions.

In conclusion, the President expects that Congress will pass a bill making the maintenance of the gold standard more certain, although nothing is likely to be done for the reform or change of our banking system. The President believes that the present national bank system is an established institution, and therefore that Congress cannot be prevailed upon to change it radically. H. L. N.

Hotel Champlain, August 5.

Items of Interest.

An interesting legal point is involved in the Cox embezzlement case, as it turns on the relations existing between the United States and Cuba. Cox is an American charged with the embezzlement of fifteen hundred dollars in Havana. He was arrested in New Orleans and has resisted all efforts to send him back to Cuba. He claims that Cuba is an independent nation under the resolutions adopted by Congress and the terms of our declaration of war against Spain; that it is not a part of the United States, even if occupied by American troops, and is not bound by the laws of the United States. The United States District Attorney contends that under present conditions a criminal captured in the United States can be returned to Cuba where he committed the offence.

Maitre Labori, the leading counsel for the defence of Captain Dreyfus, was able to be present at the court-martial August 22, and take charge of the case. His appearance was the occasion of an enthusiastic demonstration. Colonel Jouaust, the president of the court, read an address in which he referred to the "odious attempt" on Labori's life, and congratulated him upon being able to resume his duties. To this address M. Labori made an eloquent reply. He took up the work of cross-examining some of the government's witnesses who had testified during his absence, and succeeded in bringing out many facts favorable to the prisoner.

The International Commercial Congress, which meets at Philadelphia in October, promises to be the most notable gathering of the kind ever held. Thirty-one foreign governments have accepted the invitation to be represented, and have named delegates, among whom are men of world-wide reputation. Also one hundred and twenty-six foreign Chambers of Commerce and other organizations of like character have named representatives. American Chambers of Commerce, Boards of Trade, etc., will have several hundred representatives. President McKinley has been invited to open the Congress, but could give no definite reply to the invitation.

For some time the President has been considering the matter of extending our tariff laws to Porto Rico, and giving the inhabitants the benefit of unrestricted trade with this country. Attorney-General Griggs gave as his opinion that, under the existing laws, the President had no right to take such a step. The President has yielded to the Attorney-General's opinion and will await the action of Congress.

The Post-office Department has adopted a new form of domestic money order which will be introduced after September 4. It is the size of an ordinary bank draft, and has two new features, the use of carbon manifolding paper for reproducing the order instead of writing it twice, as at present, and also a receipt. It is expected that the fee charged for orders will be reduced about January 1.

General Jiminez, who was recently arrested on suspicion of being engaged in recruiting expeditions for San Domingo, has been released by the order of General Brooke. He says he is going home unarmed in response to his country's call. It is reported that he has received more than eight hundred applications to join any expeditions he may intend to send to San Domingo.

Colonel Ingersoll left no real property, and the value of his personal property is only about ten thousand dollars. He made fortunes, but except for the money used in maintaining his own household he gave it all to charitable societies and the poor. The friends who knew the extent of his benefactions are not surprised to learn that he left so little.

Digitized by Google

The agents of the Dominican insurgents have been busy recruiting expeditions in the northern part of Cuba. In spite of the vigilance of General Wood, it is certain that several expeditions have got away. General Jiminez was arrested August 18, just as he was about leaving Cienfuegos on the Menendez steamer. He calls his arrest an outrage.

President Diaz of Mexico has been invited to attend the laying of the corner-stone of the United States Government Building in Chicago, October 9. He expressed his great desire to attend, but said he would have to await the action of Congress at its assembling on the 17th of September, to grant him the necessary permission to leave Mexico.

The Transvaal government has given its reply to the British agent at Pretoria. There is no longer any doubt that President Kruger has refused to submit to the British demand for the appointment of a court of inquiry. There is a growing feeling among officials that war is the only way of settling the dispute.

Information has been received that General Otis has applied the Chinese exclusion act to the Philippine Islands. His action was not the result of instructions from Washington, but was doubtless due to an exercise of his authority as Governor-General of the Philippines.

According to the London *Daily News*, Admiral Dewey believes the Filipinos are capable of self-government, and the only way to end the insurrection and insure prosperity, is to concede it to them. After autonomy has been conceded, annexation can be talked of.

A plan is under way to provide a memorial to Colonel Ingersoll, by his followers in New York City. Twenty-five thousand dollars have been subscribed in Peoria, Ill., Colonel Ingersoll's former home, for the purpose of erecting a suitable memorial.

One hundred and fifty chiefs, representing cities in all parts of the country and Canada, attended the twenty-seventh annual convention of the International Fire Chiefs Association which assembled at Syracuse, N. Y., August 22, 1899.

President and Mrs. McKinley attended the Methodist Camp Meeting Association at Ocean Grove, N. J., August 25, where the President delivered an address to over twelve thousand persons. He was introduced by Bishop Fitzgerald.

A proposal comes from Philadelphia, that the forthcoming Exposition at Paris would be a good opportunity for the adoption of a gold coin of universal value and acceptability in all the leading commercial nations of the world.

The entire business portion of Victor, Col., the second largest town in the Cripple Creek gold mining district, was destroyed by fire August 21. There were no fatalities. The loss is estimated at $1,000,000.

Admiral Dewey has cabled that he will arrive at New York Thursday, September 28. The Olympia battalion is drilling at Ville France, and making preparations to take part in the various parades.

It is probable that one or two colored regiments will be organized for service in the Philippines. The troops would be recruited principally from the South, and would be officered by white men.

President McKinley has been elected to represent encampment 78, Union Veteran Legion, of Columbus, O., at the national encampment to be held in Baltimore, September 13, 14, and 15.

An automobile system, in competition with the street-car lines, will soon be in operation in Cleveland, O. Each automobile will seat about forty persons and will be run on schedule time.

A statue of Oliver P. Morton, who was Indiana's war governor, and for several years a prominent United States senator, will be placed in Statuary Hall at Washington, D. C.

Recent information received at the War Department shows that the experiment of enlisting the natives into the United States army has proven very successful at Porto Rico.

Speaker Thomas B. Reed has resigned his seat in Congress to take effect September 4. He will be connected with a law firm in New York, and it is reported that he will receive a guarantee of fifty thousand dollars a year.

Nearly twenty-one million dollars in gold certificates were issued in exchange for gold during the first three weeks after the order authorizing them was promulgated.

The first ten new regiments for the Philippines are expected to arrive at Manila about the first of November, and the last ten the latter part of December.

Information is received from Chicago, that passenger traffic in the West is breaking all former records. It is even larger than in the World's Fair year.

A letter dated July 12 has been received from Major-General Lawton, in which he predicts an early collapse of the insurrection in the Philippines.

The First Nebraska Volunteers, which arrived at San Francisco August 1, will be taken home on a special train at the state's expense.

Thomas B. Reed will be sixty years old next October. He has been a member of Congress continuously for twenty-three years.

The transport Panther left Philadelphia August 20, with eight hundred tons of supplies for the Porto Rican sufferers.

The St. Paul *Globe* advocates the nomination of Admiral Dewey for President by the next Democratic convention.

The Postoffice Department has shipped to Havana the first lot of stamps prepared expressly for Cuban use.

The London *Daily Telegraph* estimates that seventy thousand Americans will visit England this year.

General Joseph Wheeler arrived at Manila August 21, and reported at headquarters ready for duty.

Admiral Dewey arrived at Ville France, France, August 22. He will remain in Nice about a week.

It is reported that eleven forged documents have thus far been discovered in the Dreyfus affair.

A bill enfranchising women has been passed by the legislative council of Western Australia.

Entered at the Boston, Mass., Post Office as second-class mail matter.

When Weary of Marching.

WHEN the children of Israel first heard the good news that God had promised Moses to deliver them out of the hands of the Egyptians, they bowed their heads and worshiped, for the Promised Land, ideally beautiful, spread itself out before their mental vision, and they could picture themselves already in possession of it. Afterwards Moses made his demand on Pharaoh for the release of the Israelites and was rebuffed. Then when their taskmasters retaliated by making their burdens heavier, the children of Israel doubted Moses and his God, and complained that they had interfered in their affairs.

When Christian Science first appears to us in what seems to be our darkest hour, when we are utterly weary of the fruitless struggle against the bonds of sickness, poverty, or sin, we hear the message of liberty it brings, with thankfulness and joy, and bow our heads in worship, because we take it for granted that we can enter into this new estate where disease and discord are unknown without any protest from our lifelong masters. When we essay to test the promise of freedom and find that error tightens its grip, we feel like complaining.

The children of Israel persistently argued on the side of their masters; they could not understand how God could be more powerful than Pharaoh, and had to have proof after proof of the powerlessness of the Egyptians to stand against God, before they could get up courage to depart. Even after they had again and again seen the hand of God smite their oppressors, they were so weak in faith that God led them by a way that was free from serious obstacles because they would turn back at the least provocation. The record says: "When Pharaoh had let the people go, that God led them not through the way of the land of the Philistines, although that was near; for God said, Lest peradventure the people repent when they see war, and they return to Egypt" (Exodus, 13 : 17).

Our experience in Christian Science corresponds with that of the children of Israel at this point also. Truth leads us by paths that avoid struggles which are beyond our present strength, for at first we cannot endure very much fighting, even after we have escaped from the miserable slavery of the worst forms of sin and disease.

As time passed, the Israelites became more and more weary of the march that never seemed to bring them any nearer to the Promised Land, and they complained oft and bitterly. They almost forgot how desperate was their situation in Egypt and hated Moses for helping them to throw off the awful yoke. They whined to go back to Egypt and they tried the patience of Moses sorely, but he, dwelling in a clearer understanding of God than any of his people, saw the blessedness and peace ahead, and would not hearken to their childish complainings. He understood that the petty trials they were called upon to endure on the march were necessary to season them for the conflicts to be encountered before they should gain possession of the Promised Land.

Christian Scientists, like the followers of Moses, are wont at times to get weary of marching. There are times when nothing seems to have been gained, and we may even so far forget the misery of our condition before we were healed in Christian Science as to think we would have been better off if we had never begun the march, but there is a Moses in each consciousness who insists on going ahead, and by degrees we approach a point when there is no more looking backward; a time when we are seasoned and ready to fight valiantly. That point has not been reached by some of us yet, but it will be, and when tempted to be discouraged, let us be cheered by the history of the trials of the children of Israel, for they bear a close analogy to our struggles, and furthermore let us clearly recall our sad plight before Science came to us, and count up the many proofs we all have had of the irresistible power of the God at whose command we began the march.

We should never falter with such a Leader as we have in the Rev. Mary Baker Eddy, who has, with almost infinite patience, kept open for us a pathway through the wilderness, guiding us back to the right way when we have gone astray, re-establishing our faith in God by many wonderful works that proved His power, encouraging and supporting us again and again. Our Leader has had to endure relatively greater disappointment, ingratitude, and reproaches than ever Moses did, yet she has been faithful to her task, almost as long now as the period of Moses' leadership. Shall we not be more loyal to our dear Leader and manifest our appreciation of what she has done for us by more conscientious obedience to the promptings of the Spirit which governs her, rather than by empty platitude.

❦

Ridicule and invective are not the weapons of Love, were not the weapons of Jesus; yet they are the chief weapons used against Christian Science and Christian Scientists by a class of physicians and theologians, notwithstanding the fact that the professions of which they are representative, of all others, assume to be most Christly.

❦

Divine Love is the controlling power of the universe,—the center and circumference of existence.

❦

An honest agnostic is more to be respected than a Christian pretender, or one whose words are great, but whose acts are small.

❦

Not the human will, but the Divine must control in earth's affairs before the world will be evangelized—Christianized.

❦

Let us array our minds in garments of honesty and our acts in robes of charity.

❦

We can only do battle for God by being ourselves godly.

❦

True godliness consists in valiantly standing against the snares and temptations of evil and trampling them under foot.

❦

"Get thee behind me, Satan," must be the imperious

Digitized by Google

command of every true Christian, traveling toward the Promised Land of harmony, health, and holiness.

Better an honest heart with a small brain than a dishonest heart with a large brain. In other words, a consciousness filled with the grace of Spirit is vastly to be preferred to the polished intellect wherein spirituality is dead.

A cheerful mind without wealth is rather to be desired than a morose mind in the midst of millions.

Pure thought is the mother of pure action. Impure thought is the Satan that must get behind us.

If God is Love, and God is the Father-Mother of the universe, then truly must the "universe rest on the shoulders of Love."

Christ's Kingdom can be established only through the operation of Divine Love. Never through human strife, ambition, and hate.

The overcoming of a single sin—even the smallest—is a certain prophecy of the final destruction of all sin.

"Let not conscience make you linger, nor of fitness fondly dream;" but put you on the armor of Truth and the breastplate of Love as God has given them to you, and thus become valiant Christian warriors.

We should guard our thought against the mental suggestions of evil-doers as vigilantly as we would guard our households against the entrance of thieves, assassins, and libertines. Mental crime always precedes the physical act which makes the criminal intent manifest to mortal vision.

Where God (Good) reigns, the Devil (evil) has no sway.

What Fear Does.

CHRISTIAN SCIENCE teaches that fear, not germs or atmospheric poison, induces disease. Doctors of medicine are usually so wedded to their materialistic theories, that they almost overlook fear as a factor in disease, and search through all the forms of microscopic animal life for some material microbe to serve as creator for each disease. These doctors denounce Christian Science as irrational because it points to fear as the immediate cause of sickness instead of honoring the germ theory with credence.

To show how variously and fatally fear affects the human body, the following extracts of newspaper items that have come to us from time to time are given. These items are but a few of the many that were published during the past year, for no effort was made to get such items that were printed.

Barbara Mailhouse, New Haven, Conn., died December 9, 1898. She attended a party where there were just thirteen persons present. She noticed the fact and it was jokingly said that as she noticed it first, she would fall a victim to the fatal number. She worried over it, became ill, and was firmly convinced that she could not recover. Nothing could shake her belief that she was doomed.

New York *World.*

Miss Valentine Lamoreux, Anthony Village, R. I., died December 12, 1898. She was alarmed by the acts of a man who followed her one Sunday evening while she was going to her sister's home. She ran screaming to her sister's house and fell in a fainting fit. She regained consciousness but soon became hysterical and died the following Thursday.—New York *Press.*

Anna Moss, Sedalia, Mo., an aged negro woman, died of fright when caught out in a severe storm of thunder, lightning, and hail.—Newspaper Item.

Mrs. Joseph Wert, New Hope, Pa., died October 19, 1898, of paralysis, caused by being frightened at the actions of a demented woman.—New York *Evening Telegram.*

Father Ward (priest), New York City, died October 22, 1898. His heart was ruptured by sudden fright caused by the clanging gong of a fire patrol wagon which startled him from sleep. He leaped from his bed only to fall back upon it dead, almost immediately.—New York *Herald.*

Lewis Longpre, 153 Stockton Street, New York City, employed at Nevins & Company's dry goods store Myrtle Avenue, Brooklyn. A cash boy shouted fire! Flames shot up the elevator shaft, and customers and saleswomen began to shriek and run wildly for the exits. Longpre became so frightened that he fell over and died almost instantly.—New York *Press.*

Mrs. Moldehnke, wife of Rev. Edward F. Moldehnke, pastor of St. Peter's Lutheran Church, New York City, received a telegram announcing that her husband, who was in attendance upon the General Council of the Lutheran Church at Easton, Pa., had been elected president. Upon receiving the message the fear took possession of her that a calamity had happened to her husband, and the first words of the telegram, which read, "Your husband is ——," so shocked her that she was stricken with a hemorrhage, and sank to the floor. Mrs. Moldehnke was fifty-six years old at the time, had been in good health up to the time of her sudden illness, and had not been subject to hemorrhage. There is some hope for her recovery.

New York *Tribune.*

Mrs. Kate Wippman, Woodcliff, N. J., died January 25, 1899. She retired to her room to prepare for a surgical operation which Dr. Charles Hoffman and Dr. Perkner were waiting in an adjoining room to perform. Not receiving any summons they opened the door and found her lying on her bed dead. The doctors said that fright was the cause. Her husband said that she was in mortal terror of the operation.—Baltimore *Sun.*

Dr. Mary C. Edwards, a well-known physician, San Francisco, Cal., died July 10, 1899. The accidental setting off of a burglar alarm frightened her. She went to a window, blew a whistle, and help came. Just as she opened the front door, she fell dead.—Boston *Transcript.*

Miss Mary E. Williams of Boston, Mass., died at Portland, Me., July 18, 1899. She received a telegram summoning her to Boston, and the suspense overcame her. She died in spite of all that could be done.—Boston *Journal.*

It will be seen that pure delusion was plainly the cause of death in some of these cases, and if a delusion will kill mortal man it is certainly reasonable to suppose that it can make him sick. Christian Science destroys delusion because it removes fear.

Solving the Problem of Being.

I READ an article a few days ago written by Thomas Huxley, who was one of the kindest-hearted men that ever lived, and whose unbelief furnished the basis for a deep and continual sorrow. Though naturally a cheerful man and an earnest, tireless searcher after truth in his own way, yet the inspiring hope seemed ever to elude him, and he was often overcome by the contemplation of what was to him a ceaseless agony made necessary by the terms of the upward march of the law of evolution, according to which the strong must ever devour the weak in order that higher species may continually be evolved, and thus the work of creation through this work of natural selection might move ceaselessly onward toward still higher and better types.

So much of the sweet and bitter fruits of life are grown upon the branches of our early education. Habits of study and methods of reasoning are established containing errors which may not soon come to the light, and praise and blame follow each other as the shafts of criticism are aimed at the final solution. Now I do not pretend to be wise on general principles, but this theory of evolution which involves the necessity of evil that good may be born, or that is born of evil, or that evil is an equal partner with good in producing good results, is wholly false. My conviction is that so long as evil is admitted into the premise in any degree the result will be evil and not good. This method indulged in by so many of trying to solve the problem of the science of being, reminds me of the old Grecian problem, that if you give me fifty yards the start of you, you may run twice as fast as I do, and you will never overtake me; for while you run the fifty yards, I will run twenty-five, and while you run the twenty-five I will run twelve and one half, and while you run this I will run six and one fourth, and while you run this I will run three and one eighth, and so on *ad infinitum*, I shall always be one half the last named distance ahead of you. The reasoning seems good, but the conclusion is false; where is the trouble? Moreover, the people are a unit in believing the fallacy of the conclusion thus reached, however much they may be befogged through the false reasoning employed, and so long as they hold to this conclusion, regardless of the testimony of false witnesses, they will be right.

After all the noise of seeming discord, the turmoil and the strife of wanton cruelty, there still abides unshaken in the minds and hearts of all mankind a deep conviction that back of all there is a principle of good, infinite and eternal, absolute in wisdom, omnipotent in power, everywhere present, penetrating and pervading all. And if the foggy systems of doctrine be laid aside it will be found that there is a very manifest agreement as to what to expect at the hands of this All-in-all. In speaking of the harmony of belief of mankind in general along this line I am not holding in thought the different modes of religious practice which constitute what is generally understood as one's religion. That is only what has remained with him out of all his experiences under the direction of a certain school of thought; accretions, as it were, which the passing years have furnished, and which have lodged aimlessly yet very tenaciously around this primary truth. It is often spoken of under the endearing name of "experience," but in point of fact it constitutes all there is of our "unbelief." It is what Paul refers to when he says, "The wisdom of this world is foolishness with God."

Laying aside these worn-out schools of doctrine upon which the religious world has ever been hopelessly stranded, let us go back to the fundamental principle of our faith, that which we all hold in common, and which was stated so forcibly by St. Paul that morning in his memorable sermon on Mars Hill: "In Him we live, and move, and have our being!" This was easy to believe in simple childhood, before the vicissitudes of life had furnished so much that must now be swept away before its brightness and its beauty will again illumine our pathway and furnish that peace and joy which only come when we feel the assurance that Love and Truth are everywhere, and that no evil can possibly overtake us. This great being is Life, Love, and Truth; so that the above quotation may be paraphrased thus: In Eternal Life we live, in infinite Love we move, and in omnipresent Truth we have our being. It is needless for me to say that this belief is held by all men in common, for it is our common birthright, and our so-called experience is only a mess of pottage of which most of us have grown sick, and we would be only too glad to brush it away if we but knew how, and to return to that early possession once more. Now if we were to call together all that we have been able to hold of our so-called experience while the years have been passing, such as we speak of under the polite term of "accumulated knowledge," and see how it only serves to dim this inborn hope of eternal glory, we should not be slow in understanding why St. Paul branded it as "foolishness," and if the abiding consciousness of this ever-present spirit of Love and Truth, underlying, overshadowing, and begetting all, would drain life's cup of its bitterness, and fill it with sweetness and joy, it would seem to me that the argument must end, because there would be nothing further to seek.

I admit that I have not offered you a single thing that is new to you, neither have I asked you to accept anything which has not always been the underlying principle of your belief; but now, as I am about to tell you that this Love and Truth are a perfect panacea for all pain and sickness as well as sin; that almost every form of sickness and suffering that can befall us in this life has already been met and vanquished, I must ask you not to retreat into your unbelief, and say it is "contrary to nature." There is no "nature" outside of this one pure, holy, immaculate Spirit in which "we live, and move, and have our being." Remember, you have nothing to offer against it but your unbelief, while multiplied thousands of living witnesses are among us to-day to confront you in your infidelity. Let me ask you further not to call up all the difficult questions which naturally arise when you first begin to think upon this particular phase of the religious life. It is not likely that you can offer anything new in the way of an objection, and if you could it would vanish the moment the real truth of Being dawned upon you.

When you commenced the study of arithmetic it did not occur to you to ask whether the principle of mathematics would in time enable you to obtain a parallax, and by its aid compute the distance to a fixed star. You worked the simpler problems in their turn, and waited for more light. This is exactly what you must do if you wish to investigate that greatest of all sciences, the Science of Christianity, or Christian Science. In almost every instance the unbeliever asks: "How about broken bones, wasted lung-tissue, fungus, cancerous growth, etc.," and imagines this to be a poser, wholly ignorant of the fact that these questions have been met hundreds of times, and answered by the best of all argument, viz.: a complete demonstration in the way of a perfect cure.

It may be necessary, and often is in this young age of the Science, to have broken bones re-adjusted, and for this a surgeon should be employed if the Christian Science healer is not capable of making such re-adjustments, but here his work must end, for after three thousand years of experience, neither surgery nor *materia medica*, as such, are able to cause one single atom to take its place in building up wasted or destroyed tissue. The restorative work belongs to God, and He alone can heal.

Digitized by Google

People deny these cures just because they do not come about in the way they think they should. But the fact of so many cures being wrought in Christian Science, covering a range of every conceivable ailment, has led to the understanding that disease is not at all what we have always thought it to be, and hence the cure wrought through this, the most natural of all methods, is apt to be regarded as no cure at all by those who are still determined to think along the old lines.

Doubtless you have heard it said many a time that the reason the Jews did not receive Christ as their spiritual king, is because he did not come in the way they were expecting him; and this is generally conceded to be true, yet he could not have come as they were expecting him. In making this statement I do not wish to cast any reflections, but we are often enabled to see our own difficulties better by having a side-light of this kind thrown on. What I wish to say is that we have fixed ideas concerning both sickness and its cure, and we insist that it must be that way. I know a gentleman whose wife was healed of dropsy over a year ago, and who still insists that she is not healed, although not a single symptom of her complaint has shown itself since. The trouble with him is, he is totally unable to see how little he knows about such things, and as always happens, the deeper we become engrossed in any erroneous belief or practice, the more positive our assertions are, and the more unyielding we become to any new encroachments upon that belief or practice.

We are probably safe in saying that the medical practitioner, schooled as he is in the theories of pathology and *materia medica*, will be the last to see the reasonableness of Christian Science healing, and the ministers of the gospel, for like reasons, are showing themselves to be very tardy in recognizing the grandeur of its spiritual power to heal the broken-hearted, and to uplift humanity in general, completely killing all desire for sinful pleasures and restoring the heart to its native freedom; that pure love which alone can enable us to see God.

What a consolation to know that while the educated scribe and the haughty priest rejected this love that would have made them servants of God in deed as well as in name, it found the lowly and despised Magdalene, pierced her heart, and set free the Mary whom God had created in His own likeness. She was no longer the dead Magdalene, but the living Mary who was the last to look upon the cross; the first to behold the risen Christ on the resurrection morning.

That Love is for you. Let it slay you as it slew the Magdalene, and it will open anew the fountain of Life, and you will see what you never dreamed of before in an overwhelming reality,—that you are indeed the child of God, made in His image and likeness, and your desire henceforth will be to reflect Him in all you do and say. There will be no more lingering sickness or pain, no anguish of heart, no nights of watching, for God is absolutely all, and "in Him we live, and move, and have our being."—*Weekly Herald*, Dayton, O.

The Question of Remuneration.

RECENTLY a lecture on Christian Science was given in Salem, Oregon, and it seems to have awakened much interest in the churches. Several sermons and communications attacking Christian Science were published in the papers of Salem, and the latest contribution is a defense of Christian Science by one who is not a Scientist.

The following is an extract from an article clipped from the *Daily Capitol Journal*:—

Much stress and careful computation of figures were given to show it was money that rules the practitioner in Christian Science, and not the love of God or fellow-man, and all this in direct violation of the teaching of the Bible, wherein it is commanded to go forth and preach unto the world without price. Now in this case the Christian Science doctor heals both sickness and sin for a consideration, we will say. The Orthodox minister heals one of sin (but not sickness), also for a consideration. The Bible teaches both of these disciples to heal without price. Yet neither do. Why? The answer is self-evident, that every one has to live, and while the money is not considered as a special price put on the services rendered, it must be had by both of those disciples if they expect to live and enjoy any comfort of life, and fit themselves to go forth and preach unto the world. If it is the proper thing for one to draw salary, why not for both? since both are working for and from their individual understanding of the same verse in the Bible. Yet the salaried lecturer objects to any one else preaching a different interpretation of the Bible for a price, as it at once shows money the immediate object and aim. The difference of opinion as to a collection of vaguely translated words should not make one disciple uncharitable towards another. Jesus not only cleansed the sinner but he healed the sick. Why is it wrong for the Christian Science doctors to try to use the same manner of healing the sick that Jesus did, in addition to healing the sinner, as the other man does? Is an attempt to make man Godlike, ungodly? Most men attempt to make God manlike. In this "great and progressing nation of Americans" if one man heals sin for five hundred dollars a year, and another heals sin and sickness too for the same price, which is the one more likely to be patronized? It cannot be said with any truth that the first one is any more certain in result than the second. In fact, everything goes to show the second is composed of old and tried followers of the first, which must once more mark the Americans as a progressive and thinking race.

Speaking of money, has the eminent divine ever heard of the circumstances surrounding the financial matter of building the costly Mother Church at Boston, by the Scientists? The average church member knows how heavy the debts of the church hang over them, in salaries, etc., yet were money the real object of the Christian Scientists, one cannot suppose the response to the call (and only ONE at that) for money would have been so great and noticeable as to attract the attention of a nation.

Subscriptions were refused time and time again. I saw this in a newspaper. It is possible, as was intimated in the lecture, some of these people may have labored under a mistaken conception of the cause, but surely not all of nearly a million people now in this country are so utterly deluded as not to know how to take care of that greatest of American gods, Money.

If these progressive people hadn't thought the cause sufficient, all that money would have been invested in bicycles, probably.

Why?

I WAS present last Thursday evening at the meeting of the Aldermanic committee, where a large assemblage of representative citizens of Buffalo were gathered to listen to a controversy between Christian Scientists and the doctors. As the press of the city stated the next day, at least three hundred Scientists were there, and a large number of the ablest physicians of Buffalo, as I understand. When one becomes a Christian Scientist, he or she becomes a healer, so there were three hundred metaphysical healers and a great many physical healers. Now the question I wish to ask, and which I hope will be satisfactorily answered, is, Where are the Scientists' dead?

The daily—yes, many times daily—funeral processions to Forest Lawn in this city testify to the inability of the esteemed practising physicians always to heal. And I re-

Digitized by Google

call many of these deaths as patients of Drs. Wende and Hopkins; and yet, with the exception of the death of the child at Fort Porter some months ago, where are the Christian Scientists' dead in Buffalo? A whole page of a New York illustrated paper was devoted to the picture of Harold Frederic, who was treated by a Scientist at his own request, and the picture of his healer, with an account of his death, and the whole world took it up. What if an attempt were made to put the pictures of those who die in one day and the pictures of their doctors, in a single community? They would fill the daily paper. Dr. Hopkins, in his remarks last Thursday night said, "I wish to say something, and say it strong. There are in this city —and some right here in this hall—from a thousand to fifteen hundred men who, before the close of this year, will be in hell. And the reason will be because they have not been properly guarded against contagious disease." Do the distinguished physicians of this city doom their patients to hell and acknowledge their inability to cure a case of contagion before it comes to them? Now, if Christian Scientists have cases of contagion, they must surely heal them, for where are their dead? And it seems to be an incentive to me for parents to employ them—particularly if their dear ones are doomed to hell if they die.

Now the Council adjourned the meeting without taking action, and why not let it remain unacted upon? The Christian Scientists of Buffalo are a large body of representative citizens, and why not let them worship according to the dictates of their own conscience in the beautiful churches they are erecting, and be respected as law-abiding, God-loving citizens and neighbors, as Rev. Dr. Gaviller testified they were? But when an individual case of the breaking of the municipal law occurs, prosecute that healer, and if he or she kill a patient,—hang them if the case justifies it, but don't let the doctors who are stirring up this strife and who live in glass houses throw any more stones.

JUSTICE.

Buffalo Evening News.

Christian Science and Facts.

To the Editor of the Standard:—I see in your paper from time to time mention of cases where the Christian Scientists, faith curers, and "higher spheres" Christian Scientists, so-called, and others, who have no right to the name, have failed and in some cases the healers have been brought before the court, but I do not see the result of the trials published in the same. As for the faith curers and other healers, I have nothing to say, but will say that none of our brethren in this country, or in foreign countries, have been convicted, and furthermore no law has been passed, nor can be that will prevent Christian Scientists from healing the sick.

I think it would be a good idea to give the Christian Scientists a rest and, for a change, tell the people, with large head lines, how many children and adults the doctors are losing in Manchester, N. H., Buffalo, N. Y., New York City, Chicago, Philadelphia, and other places.

As you may not know of any patients having died under the care of physicians, I will inform you that thirty-eight died in this city last week. I will give you a case which, in every sense of the word is pretty near home. The parents of my wife have had seven children. Four of them died in the hands of a physician, and two of them were buried on the same day, having died within a few days of each other. If Christian Science is a killer, as some people believe, what is *materia medica?* Christian Science is ever ready to compare notes with any other method of healing upon the face of the globe. We do not claim to be infallible, nevertheless the Principle of this Science is, for it is God, and this Principle, like the principles of mathematics and music, which are not visible to the naked eye, can be understood and demonstrated by all who desire to know of it and live it. This idea of getting into the papers the cases we lose may seem to be a wonderful scheme by the doctors and some others who are interested in this project; but remember these words of Jefferson: "I tremble when I remember that God is just," and these words by the greatest Christian Scientist that ever walked this earth: "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again. And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?" Also remember these words: "He whose right it is shall reign."

JAMES E. BRIERLY.

Evening Standard, New Bedford, Mass.

A Clear Statement.

To The Commercial Appeal:—In your editorial yesterday on "Curing by Faith" there was a mistake which I am sure you will be glad to rectify, as it would seem to put Christian Science in an unfavorable light with those who do not understand its principles and practice.

The "divine healer" referred to, Mrs. Bratz, is in no sense of the word a Christian Scientist, and the words she uses are not at all in accord with its teachings. We have no "Zion's Homes," and no "elders," neither do we claim that failures to heal are due to lack of faith in other members of the patient's family. It should be unnecessary to add, also, that if there is any opposition in a family to our method of treatment, and a doctor is preferred, no Christian Scientist would insist upon continuing with the case, as we believe always in letting every one be fully persuaded in his own mind.

At present there seems to be a great number of mental healers who denominate themselves "divine healers," "mental scientists," "magnetic healers," "faith curists," and "hypnotists." From all these, both in principles and practice, Christian Science is as far removed as the poles, as any one can see by reading our text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy.

They who study and demonstrate the principles found in that book and the Bible alone are eligible to call themselves Christian Scientists, as it was discovered, founded, and given to the world by Mrs. Eddy, our acknowledged Leader. The great growth of this denomination, its works, both in healing the sick and reforming the sinner, and its effects upon those who practise it, as evidenced in both physical and spiritual health, is a striking commentary and proof of its worthiness, as the revival of primitive, apostolic Christianity. We invite people to examine its claims and prove for themselves its efficacy.

A CHRISTIAN SCIENTIST.

Commercial Appeal, Memphis, Tenn.

Dr. Alexander Maclaren said recently: "The fountain is in the solitary cleft of the lonely hills and draws its waters from the snows which sparkle on their tops; and the minister to be a power must live alone with God."

The *Advance* says, "The way to prosperity in all things, temporal as well as spiritual, lies through the Gate Beautiful of Giving."

Great thoughts reduced to practice become great acts.

Hazlitt.

Voice of the Press.

Christian Science Healing.

The meeting which was held in New York last week to discuss the problems which the growing Christian Science Church presented, was one of the most interesting events of the kind on record. Not that there were any large number of people there or that anything very remarkable was done, but men and women were there representing almost every branch to which higher education admits a man or a woman, and a great many things which were said there were indicative of the way in which people are coming to view the whole Christian Science question.

Christian Science, in the last few years, has assumed remarkable proportions; proportions which ten years ago would have been thought entirely impossible, and which to-day make it one of the forces in our social organization which it is well worth our while to take into consideration. And that it has grown to such dimensions, and taken such a firm hold on the minds of an ever-increasing body of our population, is proof positive that it is worthy of consideration. No one can dismiss Christian Science to-day on the ground that it is upheld by a limited circle of believers. There are more Christian Scientists to-day in America than there are Congregationalists, and their number is constantly increasing. What the future will bring forth it is impossible to foretell.

The meeting last week in New York recalled the monster demonstration in the city last winter when, at the call of the Scientists for a mammoth testimonial of believers, a tremendous throng gathered in Carnegie Hall, and testified to their belief in the new faith. The meeting this week of enemies of the faith was weak and pigmy beside that remarkable gathering. It did not have the force of that assembly, nor did it accomplish as much in the destruction of the faith as the former did in its up-building. A bill was presented calling for the passage of a law making it a criminal act to advise any sick person to refuse medical aid, and manslaughter to be responsible for the death of any person through such advice. It raised a storm of discussion, and was defeated.

What we have long believed to be necessary in the matter of Christian Science healing is either legal recognition of such healing under certain restriction as within the law and permissible, or legal condemnation of it and its energetic suppression. As it is to-day any person who can gain the ear of an invalid open to proselytizing can treat that person by a spurious or an alleged Christian Science, and there is no law to restrain him. In this way numerous people could have died and have died under treatment, and there has been no legal power vested in any one to put an end to the practice or to prosecute the "healer" who has lost his case. It would seem as if this was an utterly inadequate way of meeting the difficulties of the situation. There is no reason in it, and no protection of the public health or morals. If there is to be Christian Science "healing," and we are not entirely certain that there will not be more and more of it as the new century comes in, there should be a public recognition of it as legitimate, so that the crimes that are committed under its name could be avoided.

On the other hand, if Christian Science is to go, there should be an energetic beginning made to suppress it before it becomes too troublesome to handle. It is no small matter to deal with in these days of private rights, but some result should be reached one way or the other, and before it is too late to move. By another ten years it may be too late, and the opportunity will have been lost for good.

Editorial in the New Haven *Register*.

Eternal Punishment.

Children have a naive way of stating things which sometimes puts them in a new and startling light.

A little four-year-old was one day explaining the doctrine of eternal punishment to a playmate whose religious advantages had not been so great as her own.

"Do you know what God does with the bad people?" she asked.

"No."

"Well, He doesn't burn them, but He gives them to the bad man, and he burns them."

Could anything bring out more clearly the weakness, the utter absurdity, of the old-time orthodox faith in fire and brimstone?

It pictures a Father, who is all-loving and all-powerful, who voluntarily hands over his disobedient children to the Prince of Darkness to be eternally tormented. It implies an understanding, a partnership, between the Deity and the devil. The one plays the role of the would-be philanthropist, the other, the role of the wicked partner, who seems to have been thought as indispensable in the theologic world as in the business world. The one selects victims, the other persecutes them. The one is a despot, the other a scape-goat who relieves the former of the odium of personal vengeance. The father would not wish to be known to torture his own children, but he passes them on to an agent who is not above the work.

On the whole, as pictured in the orthodox religion of earlier times, the Arch Fiend is rather more a manly character than Jehovah.

What a travesty upon Fatherhood! What an impious interpretation of Divinity!

The infamous doctrine is a relic of those crude, barbaric times in which it originated. It could never have been tolerated in modern times, save by inheritance. It was transmitted from generation to generation, shielded by the halo of religion, and was accepted without question. If any one were tempted to doubt, they fell back upon the theory that faith in God required them to believe that He would somehow subvert the nature of things, and that that which seemed to our frail human sympathies cruel and unjust, would by celestial necromancy become tender and merciful. With this somewhat inconclusive argument they were comforted, and shouted hallelujahs over that salvation which saved themselves and doomed their neighbors.

Happily, however, the idea has not to be very seriously combated in this day and age of the world. It is practically exploded. The doctrine of fire and brimstone is fast fading away before the doctrine of Divine love.

Minneapolis *Times*.

Do the Signs Follow?

The Christian Scientists at Boston, Massachusetts, are very active, sending out printed matter, long newspaper articles, etc., in support of their system. While we cannot endorse their claims, it is difficult to understand how any one who fully believes in the plenary (full, complete) and authoritative inspiration of the several books of the New Testament and their "inerrancy" as they now stand, can avoid the conclusion that healing and immunity from sickness and danger should largely follow belief. In the sixteenth chapter of Mark, Christ, after telling his disciples to go into all the world and preach the gospel, is represented as saying to them, verses 17 and 18, "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Nothing could be more definite and specific than this last

Digitized by Google

clause. No exception is made of any case or kind of sickness—"they shall recover." And in the last verse of the chapter, and of the book, it is recorded that they went forth and preached and that the Lord confirmed the word "with signs following." No limit of time was placed upon the continuance of these signal powers for "them that believe." In the last chapter of Matthew, in the account, evidently, of the same scene, Christ says: "I am with you alway, even unto the end of the world."

Is this passage from Mark an "interpolation," an unauthorized addition by some scribe or monk? If it is genuine and spoken with the authority of God, then how few, if any, are there who "believe"! The passage, as well as others in the New Testament, seems to sustain the central idea of so-called "Christian Science healing."

Editorial in the *Republican*, Midland, Mich.

In Defence of Christian Science.

At a recent public meeting, where people attend for the purpose of worship and to preach the gospel of Christ, we were not a little but a great deal surprised to hear from the lips of one of the exhorters words of deep condemnation of the doctrine of Christian Science and statements concerning it that only a person lacking in information about the subject he was discussing (we would not impute intentional misrepresentation) could have made.

We make no pretence of being versed in the doctrines promulgated by Rev. Mary Baker G. Eddy, other than that gleaned from the incidental reading matter that comes to the hand of any one who reads on the general subjects that are more or less prominently before the people, and by the ordinary observation of the character and lives of the people who have adopted Mrs. Eddy's teachings; but from this little knowledge we do know that there can be no real Christianity without the divine Love taught by the Christian Scientists.

We believe that the people in general are lacking in information concerning this comparatively new interpretation of the Gospel. Did we say new? We may have erred. It is, perhaps, the Gospel preached by the apostle Paul when he said to the people of Athens, who had erected an altar to the unknown God, "him declare I unto you." For the reason of this lack of information we shall for a time devote a small space in our columns to the subject, and also open space to the discussion of matters pertaining to religious belief, in which will be admitted only argumentative matters and facts. Anything stated as fact must be accompanied with the proof, and quotations must refer to authors and page of document.

Valley Mirror, North Ontario, Cal.

An Obvious Retort.

The New York *World* prints a list showing that forty-two deaths of persons attended by the "divine healers" of Christian Science have occurred since 1896. The obvious retort of the Christian Scientists is: "How many cases have the regular medical practitioners lost during the same time?"—Boston *Globe*.

The *New Bedford Mercury* must believe there is something in Christian Science, or it would not devote so much editorial space in the hope of making somebody think there is not.—*Daily Enterprise*, Brockton, Mass.

"There is no progress from error into truth," says the *Morning Star*, "save by the free expression of the thoughts of honest thinkers."

From the Religious Press.

St. Bartholomew.

All that we know certainly of St. Bartholomew, whose day we keep August 24, is his name in the list of the twelve apostles. It is another case like that of St. James the Great, of how God's chosen servants may spend their lives in His service, and die leaving no record of good deeds behind them. It was enough for St. Bartholomew that he did his Master's will, and was known to God; and it ought to be enough for all those who are following in the apostle's footsteps, the ministers and stewards of Christ's ministry. Some authorities think that Bartholomew was the same as Nathanael, the young man of whom our Lord said: "Behold an Israelite indeed, in whom is no guile!" but this is only problematical.

The earliest traditions about St. Bartholomew tell us that he went as a missionary to Northern India, where he left a copy of St. Matthew's Gospel, which was afterwards found by Pantænus, the great Alexandrian catechist (190 A. D.).

Then he went with St. Philip into Phrygia. While preaching the Gospel there, they were seized and led to execution. St. Bartholomew escaped crucifixion—it is said from a sudden fear that overwhelmed the pagan governor that God would avenge his death. His last journey was into Armenia, where he made many converts. The tradition is that he was flayed alive by King Astyages, at Albanopolis upon the Caspian Sea. To the last moment he cheered and comforted the newly baptized. In pictures St. Bartholomew is shown with a bushy beard, and in the prime of life. In one hand he carries a butcher's flaying knife, and in the other a copy of St. Matthew's Gospel. At Croyland Abbey, in England, little knives used to be given away on St. Bartholomew's Day as mementos. But what we chiefly connect with his day is the horrible massacre in Paris, in 1572, ordered by the King, Charles IX., in which thirty thousand Protestants were put to death by the Papists.

The Church Standard (Episcopalian).

Entertainments for Revenue.

A suggestive little tract, entitled, "Church Entertainments for Revenue," by Rev. A. U. Boone, D.D., pastor of the First Baptist Church of Memphis, Tenn., has been published at the request of the Baptist Pastors Conference of that city. It is a candid, well-considered discussion of a subject which ought to be frankly faced by all our churches. If the giving of these entertainments for revenue is wrong—and that they are we think Dr. Boone very clearly shows—they should be given up forthwith, whatever immediate effect the relinquishment of them may have upon the church treasury. That the ultimate effect will be beneficial, not only in placing the church finances on a sound and Scriptural basis, but in exalting the thought of Christians with regard to the grace of giving, we have no doubt. Dr. Boone's tract should have a wide distribution. It may be obtained, we presume, of the author, at ten cents a copy.—*The Examiner* (Baptist).

Cost of a Church Carpet.

The *Advance* gives the following estimate of the direct and collateral cost of a church carpet. The direct cost of the carpet was $800, but as the women of the church raised the money by giving entertainments, the pastor's estimate was that when all the items of cost were figured in the carpet has cost fully $4,000. He reached this astonishing total by estimating the work, worry, nervous strain, bodily weariness, and heart-aches of one hundred women:

Digitized by Google

the heroic efforts of men, women, and children to eat the things which were to be eaten, and hear, see, or buy other things which had been provided to extract money from them; the colds, fevers, and other ailments contracted while attending the entertainments, and the consequent doctors' bills; the money spent in other churches—for if they come to your entertainments you must go to theirs; and, worst and most costly of all, the demoralization of the church and the curtailment of legitimate giving which follow in the train of such methods of raising money. But they got their carpet.—*The Watchman* (Baptist).

Prays to his Wife.

Prayers to the saints are no longer confined to the Roman Catholic Church. We know of three men who pray habitually to Henry Drummond. Dr. Joseph Parker recently said in the City Temple that he prayed to his departed wife every day. "I never come to this place," he said, "without asking her to come with me. And she does come." He added, speaking of one whose wife had recently died: "I encouraged my friend to pray to his wife, and to pray to God to ask her to come to his help. She will be more to him than twelve legions of unknown angels."

The Congregationalist.

By the Way.

Once when the Master was hurrying to the home of Jairus to raise his daughter from the dead, a poor, friendless woman touched the hem of his garment, and straightway she was healed. He planned to save the ruler's daughter; he healed the woman by the way, without planning. Much of our best and worst work is done by the way. What we purpose to do expresses our wills; what we do by the way expresses our characters. We can do good by deliberately setting ourselves to do good, if we are not good. We may assume a virtue, if we have it not, we may play a part on the stage of life; but the work by the way is the real test of character.

O. P. GIFFORD, D.D., in *The Standard* (Baptist).

Resigned to the Will of God.

BY WILLIS F. GROSS.

THE following article appeared in the *Journal* for April, 1899, and is republished by request.

To be always resigned to the will of God, is one of the most beautiful traits of the Christian character. It means infinitely more than can be comprehended by the one who has not learned this needful and all-important lesson. How little do mortals realize of the joy and peace that fills the heart of one who can look up with the eye of faith and calmly say, "Thy will be done." Less still, perhaps, do they know of the many experiences that were necessary to teach this faith and trust in God. The countless struggles, prayers, tears, and sacrifices are known only to the one who has surrendered the human will to the divine.

Uninstructed by Christian Science, mortals entertain a false sense of what it is to be resigned to the will of God. Sickness and death, the discords and calamities of earth, are frequently regarded as "dispensations of Providence," and to be resigned to the will of God means, in part at least, to believe that these evils are from Him; that He permits them and wills that they should be, even if He does not send them directly; His purpose being to humble mortals and draw them nearer to Himself.

Strangely enough, mortals try to believe that whatever of discord and suffering they are unable to prevent, is in accordance with the will of God. Incurable diseases, unforeseen calamities, and death are submitted to as manifestations of the divine will. But if they are in any way able to remedy discord, heal disease, or prevent death, they at once proceed to do so, never stopping to think that possibly these threatened evils may be dispensations of Providence. Now if the evils that mortals know how to prevent are not the will of God, and the Christian feels justified in doing all in his power to forestall them, why conclude that the evils which mortals do not know how to escape are in accordance with His will? Would it not be more rational to think that all evils might be overcome, if mortals only knew how? This view would inspire a desire to know, and cause man to seek diligently for the understanding that would prove an effectual remedy for every earthly woe.

If evils are of God, the human sense is unwilling to draw nearer to the source of its discord and suffering. It is hard to say, "Thy will be done," and misfortunes sometimes cause mortals to lose their faith in God instead of drawing them nearer to Him. The plan of salvation is shrouded in mystery when the innocent and helpless are made the victims of God's dispensations.

The light of Truth as revealed in Christian Science, is dispelling the darkness of mortal belief, and we are gaining a truer conception of God, and consequently a better understanding of what constitutes His will. We willingly accept the Scriptural declarations that God is Love; that He is unchangeable, and "no respecter of persons;" that He "is not the author of confusion but of peace." Being infinite Good, He creates nothing but Good, and "sendeth no evil upon man." This view of God has not made us love Him less but more. We desire to know more of His presence and power, for we have learned that this knowledge saves us from the very evils we once thought to be a manifestation of His will.

We now see that all sin and suffering have their seeming origin in the belief of a power apart from God. We no longer make God responsible for them. They are no part of His creation, and do not express His will. When we remember that in heaven there is no discord,—no sickness, suffering, sin, or death, but all is perfect harmony because God's will reigns supreme, we can earnestly pray as the Master taught us, "Thy kingdom come. Thy will be done in earth, as it is in heaven." Because we are learning that God's will removes all discord and suffering, it is easier to say, "Thy will be done."

We are always resigned to the will of God when it means the destruction of that which seems evil to mortal sense; but we are not so ready for God's will to be done in earth as it is in heaven, when it takes away that which human sense calls good. It is in this respect that our greatest demonstration is yet to be made. The seeming good of mortal thought is evil, for there is but one Good, and everything that does not proceed from this Great and Only Cause, is evil.

Since God is not the creator of error and evil, His will is manifest in their destruction, for He recognizes nothing but His own creation. Error is a false sense, and Truth destroys all error. If a sense of error seems to bring harmony, we may not be ready to part with it. But we must be as willing for God to take away that which is evil as we are for Him to bestow that which is good. Evil must eventually result in discord and suffering if its indulgence is continued. Love would save us from that suffering by taking away the evil sense.

While we know that God's will means only good to us, and there is no power to prevent its fulfilment, does it not seem strange that we are ever unwilling to bow in submission to the divine decree?

Mortals seek health and happiness, but want to find them in their own way. Thus they pass the long night of error in fruitless toil. When the morning dawns and they are

Digitized by Google

willing to deny self, and sacrifice human opinions and beliefs, letting God's will be done, they speedily find their heart's desire. It would seem that one experience ought to be sufficient to teach the needed lesson. But mortals so soon forget how they failed to find when they followed their own inclinations, and were finally compelled to seek in God's way. Thus one experience after another seems necessary to enforce submission to the will of Truth and Love. Constant self-denial, and surrender of human desires and opinions, demonstrates meekness and humility resigned to the will of God.

"Whom the Lord loveth he chasteneth," says the apostle. The false sense is rebuked and stripped of its disguise, that man may be willing to part with it. The psalmist declared that he was comforted by the rod as well as the staff: "Thy rod and thy staff they comfort me." A staff to lean upon symbolizes the supporting influence of Truth and Love. The rod means correction. He who earnestly desired to be saved from all evil was comforted and encouraged when he was corrected as well as when he was strengthened. To be thus comforted one must possess an earnest desire for good, and a willingness to deny self, and make any sacrifice necessary to gain the true consciousness of being.

"Behold now is the day of salvation," if one is willing to be saved. Mortals are ever willing to be saved from discord and suffering, but are they as willing to part with the error of thought that makes suffering possible? If not, they are not completely resigned to the will of God, and should not be surprised if they are not made every whit whole. The healing work of Christian Science can be wrought in no other way than in accordance with the law of God which expresses His will. This is scientific healing, for it can remove the effect only as it first removes the cause.

When God's laws are understood and obeyed, mortals will not fear to say, "Thy will be done." They will not fear the purging process, for it can take away nothing that is real and good, but only that which is unreal and evil. The fruitful branch is purged that it may bring forth fruit more abundantly.

He who loves God most, soonest feels the chastening influence of Love which instructs him in the way of righteousness. Thus may it be said of every one, that "he learns obedience by the things which he suffers." The faithful disciple of Truth knows that nothing but a false sense can suffer, and with tearful thanks he says, "Thy will be done." He asks not that he may be permitted to live in a sense of error and not suffer, but earnestly desires to be saved from the evil which makes suffering possible. Because it is his earnest desire to be always resigned to the will of God, he is ever ready to deny himself and take up the cross.

Resignation, born of spiritual understanding, is a pearl of great price, to obtain which we might well go and sell all that we have. It is impossible to enumerate all the blessings it has in store for us, but we might speak of a few of them. Let us remember that its foundation and support is to be found only in the understanding that there is but one Mind, one Creator, and one Power. Everything that really exists is created by this Mind, which governs all in perpetual harmony.

Resignation removes anxiety for the future, and enables the faithful followers of Truth to cast every burden on the Lord. The future, as well as the present, is in the hands of Omnipotence, and since He governs all, and sends no evil, there is nothing to fear. Love will supply all things, and the Christian is able to "take no [anxious] thought for the morrow." He knows that the morrow with all it may bring forth is in God's hands, and he can say, All is well. He may not see his way clear from a human standpoint, but he understands that Mind governs all, and he knows that the divine will is harmony. The battle is already fought and the victory won, when he can say, "Thy will be done," because he knows God and is willing to trust Him.

Resignation saves from the suffering occasioned by envy and jealousy. Because he is willing to be what and where God would have him be, the faithful disciple has no desire to fill the place occupied by another. Because he knows that all of good another has gained is for him also, he does not envy the achievements of his faithful brother, but is impelled rather to go and do likewise, well knowing that he shall receive when he deserves.

He finds no occasion for jealousy, for he knows that it is impossible for error to take away even the least that Truth has given him. He is able to love his brother with an unselfish love, because he knows that if God's will is done, they can dwell together in harmony, and neither will deprive the other of what God bestows.

Strife and contention pass away, for the "giver of every good and perfect gift" withholds no good thing from those who love Him. When selfishness has given place to love, the achievements of another bring as great a sense of pleasure as one's own welldoing, for he "seeketh not his own but another's good."

If envious mortals seek to take away what God has given, he can pray, "Father, forgive them, they know not what they do." And knowing that error has no power to defeat the will of Omnipotence, he rests secure.

Resignation surrenders personal opinion to the will of God, but never yields to the demands of error. For this reason it may appear to be selfishness to the selfish disposition. It seeks to please God, not man. Its opposition to error is equalled only by its firmness for Truth. It may become the victim of false accusation, but only prays the more earnestly, "Thy kingdom come."

Because meekness and humility is the basis of true harmony, resignation enables the disciples of Truth to come together "with one accord in one place." It destroys all ambitious desire to have what others cannot gain, or to occupy higher and more important positions. When mortals are willing for Mind to govern them in every thought, word, and deed, they will know "how good and how pleasant it is for brethren to dwell together in unity."

Loyalty to Our Publications.

BY WILLIAM R. RATHVON.

THAT every Christian Scientist has an obligation resting upon him to support stanchly the several publications issued by our Publishing Society, can hardly be questioned, though the performance of such duty may be overlooked by many. Those who receive the *Sentinel* and *Journal* can testify to their helpful ministrations in regularly bringing their tithes of varied experience, of encouragement and wisdom, of uplifting thought and faithful service, but none are more ready so to attest than those who live remote from the centers of population and in regions where Scientists are not numerous. To them no visitors are so welcome, none whose coming is so eagerly awaited, as these timely bearers of good cheer.

The remarkable growth of Christian Science has been promoted by various agencies, and if it were possible to compute the efficiency of each, our publications would be found high up on the list. In our enjoyment of them we are apt to overlook a most important feature of their mission; viz., their employment as a means of bringing Christian Science to the notice of those who know little or nothing about it. They are the silent missionaries of Truth, always ready to speak, yet never speaking unbidden. They gain a hearing when the spoken word would be rejected, and they penetrate the strongholds of the foe,

Digitized by Google

wherein a less impersonal exponent of the Truth could gain no entrance. A well-worn copy of the *Sentinel* or *Journal* is evidence that good work has been done somewhere; it is a token that seed—good seed—has been sown, and is an humble witness that good tidings have been borne to waiting hearts. We need not count that day lost which is marked by our sending the sturdy *Sentinel* or the time-tried *Journal* to some one of unbiased thought. There need be no fear of anything being so conveyed that is not Scientific, that needs to be apologized for, or which does not wholly conform to the teachings of Science and Health. No taint of "false teaching" can mar those pages, nor can they be made the channel of selfish aims and motives. It should be a satisfaction to every Christian Scientist to know that whatever bears the imprint of the Christian Science Publishing Society needs no further guarantee of authenticity or reliability. The fact that the Mother has designated it as the mouthpiece of her communications to the Field should of itself impel us to loyal and unswerving support.

How best to manifest that support rests with each of us to determine for himself. Financial support by subscription, moral support by distribution, and scientific support by demonstration readily suggest themselves. A faithful performance of the last will make the first two easy.

When in doubt about subscribing, the suggestion of error, "cannot afford it," may intrude itself. If met promptly, and handled scientifically, not once only, but as often as it presents itself, the way will soon be opened. From the same source comes the mental intimation, "don't write" when one is prompted to send to headquarters some helpful experience or thought, and it too must be destroyed, for the pen as well as the purse has its work to do in the support of our publications.

In our individual experiences we know how indispensable it is for us to be on our guard constantly to shut out wrong thoughts and wrong words lest we transgress or mislead others. What scientific scrutiny then must be necessary to sift the false from the true, the chaff from the wheat, in the grist that each mail carries to headquarters! None but faithful servants can do such work and do it well. We in the Field can gather but a faint idea of the incessant watchfulness, foresight, patience, and demonstration that must precede the issuance of every number, and perhaps if we gave more thought to these things we should be stimulated to distribute more copies.

Such distribution will antidote the virus of malpractice and misrepresentation with which some publications reek in these days of error rampant. It would also act as a corrective of the well-meant but not always well-balanced utterances of those supporters of Christian Science who have more zeal than understanding, more enthusiasm than discretion.

Placing the Scriptures over and above all, the true Christian Scientist is constantly turning with loving expectancy to our text-book, Science and Health, for guidance and enlightenment. Let him not overlook the part in the grand plan of spiritual progression now unfolding, that is taken by our publications, and let him promptly fulfil his quota of their support in the way that seems best to him.

The "State Papers" of Christian Science.

BY CLIFTON L. HILDUM.

CASTING the eye over the wide range of our Christian Science literature, we find that the United States is not alone in the possession of a Declaration of Independence, an Emancipation Proclamation, or of a Constitution.

First among our State Papers comes the Declaration of Independence. It is less voluminous, less dazzling in the brilliancy of its rhetorical construction, than the one to which all Americans point with such just pride and with such assurance of the fairness of its provisions—that product of the thought of the great statesman, Thomas Jefferson; but it is more potent, it is older, it is more certain in the results which follow its adoption and maintenance. One need not be a scholar to enable him to comprehend it,—in fact, children of tender years seem often more alive to its true meaning than are those of a larger growth; and it is lisped by the child with far more assurance than that which, in many cases, attends the most scholarly articulation of a collegiate.

Our Declaration is made up of but three words, but what measureless meaning they contain! A meaning as deep and wide and high as space itself.

"God is Love." God,—the divine Principle of all being,—the only Cause and Creator of the universe and man, the only Power—is—not was, or has been; not may be; not even shall be, but is, at this moment, in "the eternal now"—Love. Not human affection, not the love of one earthly friend for another, not even the love of a mother for her child; but Love itself—the very Principle of gentleness, meekness, goodness. This is our Declaration of Independence: "God is Love."

The full understanding of this Declaration makes us independent of all the so-called claims of error, whatever form they may seem to take. And the independence which we feel as a result of our study and application of this Declaration, we know is not limited in its scope or its duration. We are independent now and forever, and no seeming power less than God can have dominion over us.

Our Emancipation Proclamation is broader in its application, more far-reaching in effects, and even of more practical value to the world at large than that masterpiece of State Literature promulgated by our beloved martyred President, the great liberator of a down-trodden race—Abraham Lincoln.

Our Proclamation was not framed in human language, and made public, until after the issuance of the one which freed the African slave; but when our Leader put into words the Scientific Statement of Being, she pointed the way to a freedom such as, for fifteen centuries, men had scarce contemplated, even in their most ethereal dreams; and enabled us to claim, in its fulness, the promise given in the words, "Ye shall know the Truth, and the Truth shall make you free." Verily, the revelations which have come to us through this Messenger of God will make us free indeed, if we but accept the terms of our release from the slavery of ages.

Our Constitution, too, while made up of only six short "Tenets," instead of the eight voluminous "Articles" which, together with fifteen "Amendments," go to make up the Constitution of the United States, is such a Constitution as might with safety be adopted as the supreme law in the "World State," to which some hopeful ones are looking forward, when all countries of the earth shall be united in an indestructible union.

"As adherents of Truth, we take the Scriptures for our guide to eternal life."

So reads the first Article of the Constitution in conformity with whose provisions all true Christian Scientists are striving, must strive, daily, to live. The closing Article reads thus:—

"We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and *pure*." And as, to our highest ability, we live up to the requirements of the Constitution to which we, as members of the Church of Christ, Scientist, have sworn allegiance, and see the results which follow our endeavors so to live, we are prompted to sing with the Bard of Judah,—

"Oh that men would praise the Lord for His goodness, and for His wonderful works to the children of men."

Questions and Answers.

If God created man spiritual, the image and likeness of Himself, who made man's body? Did mortal mind make it so perfect and beautiful?—J. C. L.

The mortal conception of perfection and beauty is but a poor counterfeit of that beauty and perfection which are eternal. The material sense of body must give place to the true sense, which is spiritual. This does not rob man of his individuality; rather does it reveal his true identity as a child of God.

Perfection and beauty are qualities of Mind. They do not belong to matter even though mortal mind does declare they are material. The human conception of beauty and loveliness will greatly increase as it is understood that man's life is in Mind and not in a material body.

If the present turning to Truth has healed so-called incurable diseases, restored the lifelong invalid to health, strength, and happiness, and caused the sinner to turn from his sin and look for pleasure in ways that are just and right, how much more will be accomplished as man grows in the understanding that he is indeed spiritual and not material?

The teaching that man is spiritual is both Scriptural and Scientific. This statement is not, however, accepted by material sense, because this sense views everything from a material standpoint. The good results accomplished by accepting the revelation of Science which denies material sense prove that the spiritual sense of things is the true sense. "By their fruits ye shall know them."

As a man thinketh, so is he. If he thinks of himself as created in and of matter, he will view everything from that standpoint, and his conception of all things will be mortal and material. Life, intelligence, health, strength, beauty, happiness, and all else, will seem to be material and consequently mortal. But if on the other hand he accepts the Scriptural declaration that man *is* spiritual because he is God's image and likeness, he begins to look at all things from a spiritual point of view. Health, strength, and beauty are ideas of divine Mind. They grow upon his thought as he sees them in their true light. He is not able to free himself from all the illusions of material belief at once. It is only as he grows in the understanding that all reality is in divine Mind that he is able to prove the falsity of the material sense of things. Little by little he overcomes error with Truth. The struggle must continue until all error in his consciousness is destroyed, and then he will have fully demonstrated that man *is* spiritual, the image and likeness of God.

❧❧❧

Some of the Readers in the Field seem to feel that it is desirable to "recite" the Lesson-Sermon. Is it right to do so?—A Student.

Section 4 of Article IV., of the Church Manual, says: "The First Readers in the churches of Christian Science shall *read* the correlative texts in 'Science and Health with Key to the Scriptures;' and the Second Readers shall *read* the Bible texts. The *readings* from the Scriptures shall precede the *readings* from Science and Health. The Readers shall not *read* from copies or manuscripts, but from the book." The italics are ours.

Does it not seem strange that such impracticable suggestions should be listened to even for a moment? Would it not be well to study more carefully the Church Manual, and thus avoid the possibility of falling into such errors?

Rev. Mr. Ferris said at a recent public meeting in Boston, that "When God has some great work to perform, He has always touched the heart of a woman and the work has been done."

Testimonies.

Some Good Demonstrations.

Some six years ago I came to Denver almost a mental and physical wreck. At that time I was entirely ignorant of Christian Science, but there was a Scientist living in the neighborhood whom I met, and I was soon under treatment. In about three weeks I was healed of sick headaches, which I had had since a child, and which many physicians had tried in vain to cure. Many other physical ailments were also healed, but the greatest healing was the changing of the entire character from a frivolous, careless woman of the world to a more thoughtful and, I trust, a truer and a better woman. The benefit in this and in all ways has been wonderful to me. From a restless, uneasy condition of mind, with a ceaseless longing that seemed never satisfied, to a peaceful, contented restfulness, is a something that must be experienced to be fully appreciated. This is only one of the many blessings that Christian Science has brought to me.

Many seeming sorrows have come into my life, such as the giving up of my life companion, also reverses of fortune, but the teachings of Christian Science had, to some degree, prepared me to meet these sorrows with fortitude. Words fail to express the deep thankfulness I feel for the Truth as revealed through Christian Science. A. G.

❧❧❧

In 1892 my son, then a boy of two years, was taken with a fever which developed into spinal meningitis. My wife wished him to be treated by Christian Science, but, not satisfied, I gave the case to one of Denver's leading physicians. He treated the child for several weeks, possibly three months, and, although the patient mended to the extent that he could be carried about the house, still he was left with a severe cough, which the doctor said he could not reach, having tried his most trusted remedies. Worse than the cough was the lame condition in which he was left. His spinal column was so curved that in standing erect he could not touch the toes of his right foot to the floor. His right shoulder was three inches higher than the left, and all the joints of his body, particularly those of his fingers, were swollen and misshapen. After the physician had said that he could do no more for the boy, I consented to have him treated by Science. Mark the change. I gave the case for treatment on Monday at about noon. That evening at supper, the child manifested the first desire to eat which he had shown during his three months illness. Inside of two weeks the cough had entirely disappeared, and within three weeks he was healed and as straight as any boy. I do not remember of his having been sick one entire day since. R. V. Brown, 525 Washington Ave.

❧❧❧

For many years I had severe headaches, said to be inherited, which the physicians said would finally develop into paralysis. I suffered untold agony, and became very much discouraged, as I had tried the best specialists of Denver, only finding temporary relief. One of the physicians ordered glasses for me, which I wore faithfully for three years, but found myself growing worse, and as a last resort I sought Christian Science. I began to improve immediately, and in a short time was entirely healed, leaving off my glasses without the slightest inconvenience. I was also healed of constipation. I took a course of instruction in Christian Science, and since that time (five years ago) our family of six members have not touched medicine of any kind. C. Bartley.

❧❧❧

Nine years ago I was a physical wreck, suffering with a stomach trouble from which I could find no relief. After trying many physicians, one finally told me he was simply experimenting, as he did not know what the disease was.

Digitized by Google

That caused me to lose all faith in both doctors and medicine, but upon the earnest solicitation of my husband, I was preparing to go to New York to consult a noted specialist, when a friend came asking me to try Christian Science. I had no faith in it, but the fact that they gave no medicine appealed to me. I went at once to a Scientist and was cured after the third treatment. Not understanding Christian Science, I insisted on taking treatment for a month, fearing the trouble might return. Since studying the Science and trying to live it, the healing seems small in comparison with the peace and joy it has brought into my life. My heart is filled with gratitude for this blessed Truth.

K. SPEER.

Denver Republican.

Christian Science in Childbirth.

During the time of pregnancy, I used my understanding of Science and felt perfectly well. When the time for delivery arrived I sent for my teacher, who came at once and found me reading Science and Health. I had no time to send for my nurse, but felt so fearless and painless that I could have attended to the mechanical part myself and did help. Page 459 of Science and Health was very helpful in the demonstration. The birth was comparatively painless. It was all over within an hour, teacher gone and husband back to the office. I was up and around the room next day, Wednesday. The following Sunday I was up and dressed, and Sunday night I got lunch. I did just the same as ever and felt perfectly strong. I have not lain down during the day since I got up, nor have I felt the need of it. I had two children before and I know that it seems necessary to do so in the old thought.

When baby was a week old I went to church. It was a cold, rainy night, and I live about a mile from the church, but I have felt no ill effect whatever. All laws made for me being so "inhuman" were destroyed by Science. Baby is now six months old. Christian Science is a boon to mothers, and I wish all would have it. It is helping me so much in raising our little family. We are so thankful to Mrs. Eddy for this blessed Truth.

MRS. A. C. EDDY, Bloomington, Ill.

Locomotor Ataxia.

J. B. Connell of Onion River, who was confined to his bed all winter with locomotor ataxia, and received no aid from medical treatment, finally resolved to try Christian Science, and about a month ago, after just two treatments, he left his bed and has been able to walk around every day since. He was at the Falls last Thursday, and his case is really a remarkable one.—*Sheboygan (Wis.) County News.*

Prayer Answered.

E. H. (a reader of this journal) writes from Waterbury, Conn., giving this incident of answered prayer:—

We had bidden mother, as we thought, a last good-bye. She had lapsed into unconsciousness. As I sat beside her, the thought suddenly came into my mind: "Why should your mother die? Is God's arm shortened? Is there not a great Physician? Remember him who cured all manner of diseases." Without leaving my seat, I lifted up my heart to God and I prayed, oh, so fervently! I said: "O, thou Divine Healer, I know that thou art able to do this thing. If it be thy will, for thy name's sake heal her and let the change come right now, that thy name may be glorified. If thou wilt do this, I will tell of it." The burden seemed to be lifted from my heart. In a few minutes the change for the better came. She is still steadily gaining. I promised God that I would tell of it, and I send you this because I dare not be unfaithful to that promise.—*Christian Herald.*

The *Advance* says that at a recent installation the minister who was to give the charge to the new pastor, gave in reality a charge to the people. He said, "You have called this man to fill your pulpit, and now it is your duty to fill the pews. When he is absent from the pulpit he will provide a substitute. When you are absent from the pews will you provide substitutes?"

The *Churchman* says it is a grave, even if popular, error to suppose that the Christian Sunday is a mere continuation of the Jewish Sabbath. It is something vastly more. It is pregnant with spiritual privileges as much greater than its antetype as Christianity is greater than Judaism; hence it is not less, but more, sacred.

The *Sunday School Times* says: "Loving those who love us is all very well in its way. Sometimes it is easier to do this than not to do it. The true test of Christlikeness is loving the unloving and the unlovely. That is the test we ought to judge ourselves by."

Notices.

Beginning with September, 1899, the rates for the *Sentinel* will be as follows:—
